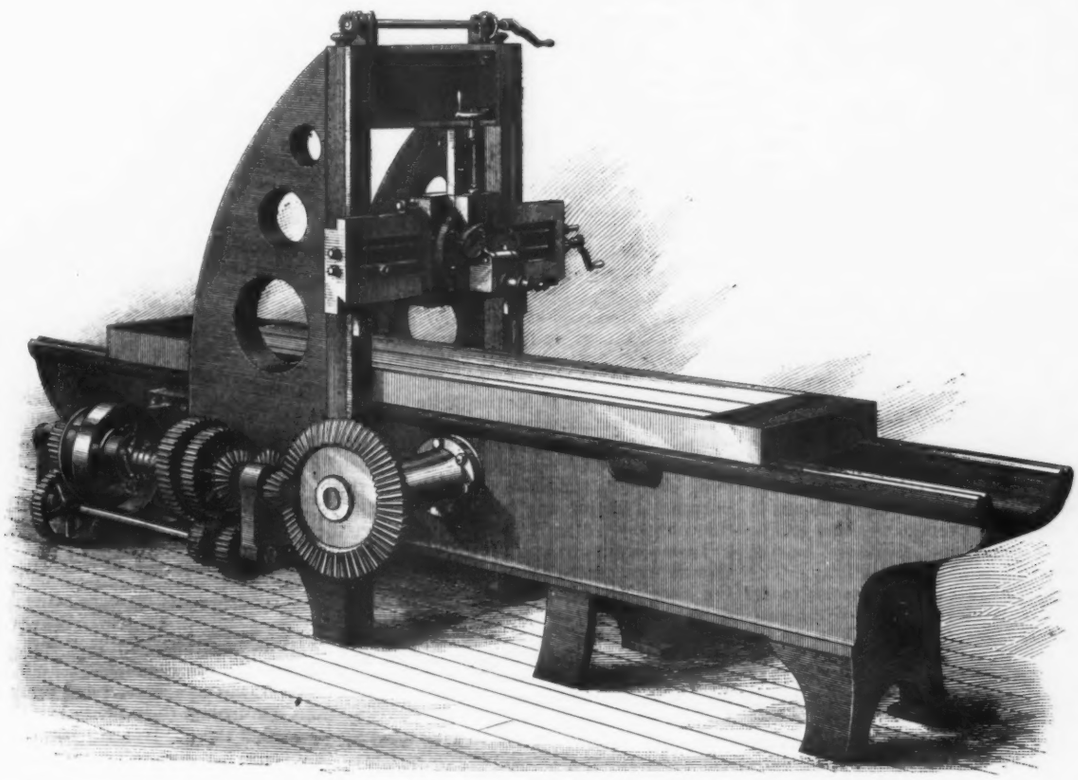
THE IRON AGE

THURSDAY JUNE 30, 1892.

The Coes 26-Inch Single Belt Planer.

We present herewith an illustration of a style of metal planer which, while it adheres closely in design to the generally accepted forms, yet presents new features especially designed to meet the requirements of advanced modern shop practice. The principal object in view has been to overcome, so far as possible, the momentum of the moving parts, and thus allow the construction of a planer with a quick return motion free from shock or jar.

The driving motion consists of a two-step cone of large diameter, which is mounted loose on the driving shaft. The cone is back geared with the addition of an intermediate pinion to reverse the direction of motion, and two slip gears are mounted upon the back gear shaft; the two slow-motion gears are keyed together and are also mounted loose upon the driving shaft, and one of them has clutch teeth of the saw-tooth form. A clutch sleeve is mounted on the driving shaft between the cone and slow-motion gears. It is made of as small diameter as practicable, and is operated by the table to engage either the cone or the slow-motion gears. The clutch with the driving pinion and rack wheel is the only part which is reversed, the cone, friction, band and gears being in continuous motion.



THE COES 26-INCH SINGLE BELT PLANER.

The belt power is made ample to perform the work required in reversing the table and its load, while the back gear train is proportioned to withstand heavy cutting strains.

The two-step cone, together with the two slip gears in the back gear train, give two reversing and four cutting speeds, varying from 14 feet per minute for tough steel up to 30 feet for brass, with two intermediate grades for soft and hard iron. The clutch is operated by a cam from the table and is held firmly in either position. The feed disk is driven from bevel gearing attached to the slow-motion gears; it is thus entirely independent of the motion of the table, and is driven positively and continuously in one direction.

A stop-motion device is employed for engaging the feed crank disk at the end of the backing stroke of the table, when the disk makes one whole revolution and stops, this motion operating the feed boxes at the end of the cross rail in the ordinary manner. The cam for controlling the feed stop motion is attached to the reversing dog on the table, so that the feed only takes place upon the completion of the backing stroke, and the table can be reversed by hand at will for tool setting without feeding, unless the stop motion is also connected up to be operated by hand at the same time.

It will be seen from this description that with this planer there is no shifting of belts, and no reversal of pulleys in high velocity, thus giving a smooth and easy motion with a high ratio of quick return motion, while the feed motion is positive and independent of the quick motion of the table. The machine is strongly geared and designed for heavy duty. It is being brought out by Z. B. Coes, Hamilton, Ohio.

Steel wire seating for railway car seats is being used in England and is said to be taking the place of the padded and volute spring seats. The new seat is composed of minute steel wire rings compactly knit together, over which only a thin layer of hair or a pad of felt is necessary. The London & Northwestern Railway have already fitted 653 to car seats and sleeping car berths, while the Great Eastern Railway have in use nearly 5000.

Compressed Air Traction for City Railroads.

The urgent necessity for some form of motive power to supersede the use of horses for passenger transportation in cities, something capable of universal adaptation to the somewhat varying requirements of different localities, has long been recognized. Many and various are the systems which have been devised and tested, some proving utter failures, while others have been so indifferently successful as to prevent their adoption for general use.

So far there appear to have been in this country but two methods of propulsion capable of attaining to the commercial results necessary to success, and these—the electrical and cable systems—are now very extensively used.

But while their success, both as to mechanical operation and commercial results, is unquestionable, the fact that they are not entirely satisfactory is indicated by the great readiness shown by the management of city railways to consider any new system which may be brought to their attention, provided, of course, that it appears to embody correct mechanical principles, and is not merely the crude and impracticable production of some enthusiastic but ignorant inventor.

As is well known, many devices for the utilization of compressed air for this purpose have been practically tested in the United States during the past 15 or 20 years. But all were failures from the fact that they were unable to carry a sufficient

quantity of air to furnish power for the distance necessary to be covered for the round trip, or from one terminal to the other. Of course the quantity could be very largely increased by carrying excessively high pressure, but the mechanical difficulties involved in that case were of such a nature as to render this solution of the problem impracticable.

Though not generally known, the possibility of the successful adaptation of compressed air to this purpose has been demonstrated by daily use for over a dozen years on the other side of the Atlantic. The system referred to is that of L. Mekarski of Paris, and the generic principle, to which alone its success may be attributed, is the utilization of the high specific heat of water for the purpose of increasing the temperature of the compressed air, and consequently causing an expansion of volume to an extent which entirely overcomes the difficulty of storing a sufficient supply for the distance necessary to be traversed in making a trip of average length.

In the year 1878 the tramways of Nantes, France, were equipped with a full line of cars of the Mekarski system, and almost from the first trip they have proved to be an unqualified success, having been in continuous operation since that time. That this success was commercial, as well as mechanical, is shown by the annual reports of the Nantes Company, in which the details of earnings and expenditures are fully given for comparison, with both animal and steam traction.

While there was undoubtedly room for considerable improvement as to the details of mechanical construction, in both the compression plant and the motors themselves, the results obtained were sufficiently marked to render it a matter of pertinent inquiry as to why the system should not have been more extensively used. There is no doubt as to the fact that there was a ready market for a system of mechanical traction to supersede horse power on city railways the world over. The conditions affecting its application were certainly no less difficult in Nantes than the average of other localities, and it could not, therefore, be due to any want of general adaptability. The only solution of this question seems to be in the business management of the promoters of the enterprise. While we do not presume to criticise the policy of the French company, there is no impropriety in seeking to account for the failure to extend the application of the system beyond the single locality mentioned, in view of the fact that the expiration of the patents, about a year since, has rendered the valuable features of the invention public property, and that its introduction into this country is now being attempted.

In the year 1881 a syndicate of English capitalists secured the services of Sir F. J. Bramwell, president of the London Society of Engineers, to proceed to Nantes and examine the system in daily operation, with the object, if his report proved favorable, of organizing a company to introduce the system on the London tramways. As a result of this investigation, the company was formed, and a car constructed. This was in several respects a modification of the French design as used in Nantes. Its performance was perfectly satisfactory during the many trial trips made for public demonstration, but for some reason the enterprise was never placed on a commercial basis.

In 1882 Col. Jno. E. Gowen, an American, at that time resident in Paris, came to this country as representative of the Mekarski Company, to negotiate the sale of the United States patent. After visiting Boston and New York, where he failed to excite interest in the matter, he made a more successful effort in Philadelphia. Upon the representations of Colonel Gowen, a leading city railway magnate was induced to bear the expense of a practical demonstration of the system upon one of the several lines controlled by him. Unfortunately for the success of this exhibit, very bad judgment was shown as to the method. Instead of importing one of the proved motors of the Nantes Company, and adapting its wheel gauge to suit our American tracks, one of the several steam cars exhibited on the Market street line during the Centennial Exposition (and which, by the way, was by no means successful even under steam) was altered, and equipped with the necessary storage for air. The car and machinery, when ready for the road, proved to be nearly double the weight of the French cars, carrying the same quantity of air, which fact alone was sufficient to handicap the undertaking. The only runs that could be safely undertaken were for comparatively short distances, and although the test was in all respects save one entirely satisfactory, the one prerequisite for success—*i. e.*, the ability to make the necessary length of trip—was lacking, and the demonstration as such was a failure.

While this result of the blunder was fatal, so far as the further consideration of the enterprise by the before-mentioned capitalist was concerned, there was sufficient proof of the capabilities of the system to interest many of those present at the several trials of the car. Among the number was Isaac S. Waterman, a well-known Philadelphia capitalist, ironmaster and manufacturer. The matter was brought to his attention through his being principal owner of the Philadelphia Hydraulic Works, where the work was done of equipping the car and furnishing the necessary compression machinery. His investigations were so far satisfactory that a preliminary contract was executed by which Mr. Waterman purchased the entire interest in the patent for the United States. Colonel Gowen, although fully authorized by the French Mekarski Company to act for them in the consummation of such sale, desired to return to Paris for the purpose of having the contract ratified by the company. Mr. Waterman also desired to have a report from his own representative on the construction and operation of the cars and compression plant then in daily use in Nantes. He therefore decided to have the superintendent of the hydraulic works accompany Colonel Gowen and make a thorough investigation of the subject from the standpoint of an unbiased and disinterested observer.

The result of this investigation was put into the form of a printed report for circulation as part of the contemplated prospectus of an American company. The circulation of the pamphlet, however, was prevented by the unfortunate sequel to the negotiations. Colonel Gowen returned from Paris with the ratification of the contract, made subject to several new and burdensome conditions, which Mr. Waterman considered as prohibitory if adhered to. Upon his positive refusal to accept any other than the original terms, Colonel Gowen made several further trips to Paris in his endeavors to harmonize the differences between the principals to the transaction. Finally Mr. Waterman lost patience with what he considered the vacillating course of the Mekarski people and withdrew entirely from further consideration of the matter. Colonel Gowen, after trying unsuccessfully to find another purchaser for the patents, returned to Europe with his mission a failure.

Since the expiration of the patents, about a year since, the valuable features of the system have attracted more or less attention in the United States, and several of our technical and trades publications have referred to it in articles more or less elaborate. The probability of its early introduction into successful use, and the great importance of such a consummation, renders these initial efforts of general interest.

That compressed air is to be the motive power of the future for city railways would be a rather bold and unwarranted assertion; but that it may become so is, at least, a matter of reasonable probability. Theoretically considered, and practically demonstrated, we find no discrepancies, and both theory and practice point to success, provided the treatment is what it should be.

The Masonry of Boiler Settings.

The brick work about boiler settings is often very imperfectly laid. It is mostly done by contract, with no one to supervise it who understands the severe use to which it is to be put. The bricklayer, who may never have worked on a job of this kind before, builds good-looking inside and outside walls, but the space between is apt to be filled up with odds and ends in the most promiscuous manner. Furthermore, he puts the same joint in that he would use if he were building a house, and this is just what we do not want in a boiler setting, particularly in the fire brick lining of the furnace. The joints throughout the setting should be thin, and the work should be done as faithfully inside as outside. Kaolin or prepared fire clay is used in laying the fire brick, and it should be mixed up so thin that it cannot well be used with a trowel. Some mill owners who have had experience in this direction will not allow a trowel to be employed at all, but require the men to use iron spoons. The fire brick should be dipped in water as they are used, so that when they are laid they will not immediately "drink up" the water from the cement. They should then receive a thin coating of the prepared fire clay or kaolin paste, and be carefully placed in position with as little of the kaolin or fire clay as possible. Every sixth course, beginning with the grates, should be a row of headers, well bonded into the masonry behind. The headers are of little use unless they are well secured into the walls of the setting, for when the lower courses of fire brick have burned away more or less we have to rely on these headers to a considerable extent to hold the upper part of the wall in position. In repairing fire-brick linings the lower courses, which burn out fastest, can be removed and replaced without disturbing the upper part of the wall, provided the headers are secure; while if they are not the entire wall may have to be rebuilt, and this cannot be done without either removing the boiler or tearing down a considerable part of the setting.—*The Locomotive.*

The population bulletin, just issued by the Census Bureau, shows the country what population it had in 1890. The total is 62,622,250, an increase of 12,466,467, or 24 86 per cent. The males number 32,067,880 and the females 30,554,370. The former have increased faster than the latter since 1880 by 1.64 per cent. It is encouraging to know that 53,372,702 of this population were born in this country, 9,249,547 being foreign born. There were 54,983,890 white persons in the country in 1890, and 7,638,360 persons of color, which includes negroes, Chinese, Japanese, and civilized Indians. If the population continues to increase at the same rate per cent. during the ten years between 1890 and 1900 the country will enter the new century with over 78,000,000. It is more likely to be 80,000,000. The white increase during the last decade was 26.68 per cent., and the colored increase 13.11 per cent. The same proportional increase would give over 70,000,000 whites and about 9,000,000 colored persons in 1900.

WORLD'S FAIR NOTES.

From this time onward work will boom at Jackson Park. Several of the great structures have been delayed by reason of the excuses of contractors for the carpentry and for the iron work. They first claimed they could not go ahead until the iron men had made certain progress. The latter said they were doing work as fast as the material arrived. A radical change was inaugurated last week. On the big Manufactures Building two shifts of men are now at work. The first one, consisting of 250 laborers, begin at 4 o'clock in the morning and is relieved at 12 o'clock by the second shift of 250 men, which goes on duty about that time. There has been no further lagging. The Edgemoor Bridge Company, who are putting up the big trusses, are employing 300 men. This week there will be 1000 workmen instead of 800.

The same rush of work has been ordered on Machinery Hall. Altogether 496 men are pushing that building to completion. Of that number 198 are working 16 hours a day.

A similar rush is taking place in the Landscape department. In this as well as other branches of the work, Superintendent Geraldine is crowding the contractors and their workmen to the limit. Three hundred laborers are working 16 hours a day, beginning at 4 o'clock in the morning, to complete the dredging and gardening.

The people who have in charge the provision for an adequate water supply are working 16 hours a day in digging trenches and laying pipes.

State buildings are going up with a rush. The commissioners of the various World's Fair boards are every day crowding the Surveying Department to have their sites staked off. It took the State people a long time to get started, but now they want to go faster than they can be accommodated. Last week workmen were engaged in putting up 14 structures and four more sites have been surveyed.

Illinois has, of course, led. Then come Indiana, Ohio, Wisconsin, Kansas, Michigan, Massachusetts, Pennsylvania, Delaware, New York, West Virginia, Rhode Island, Connecticut and Maine. Indiana, Ohio and Wisconsin structures are nearly ready for roofing. The others are not so far advanced, but most of them being small they shoot up with great rapidity.

California, Maryland, Wyoming and Montana are ready to begin building. In the Midway Plaisance the Barre Sliding Railway is being constructed, the natatorium is under way, and the Moorish Palace people will begin in a few days.

The Heidenrich Company of Chicago were awarded on Friday the contract for constructing the California State Building. The structure, which has been previously described, will cost approximately $75,000.

Test Trip of the Launches.

The test of the launches which are to carry passengers through the canals and lagoons at Jackson Park during the period of the fair was begun last week. C. P. Willard & Co.'s steam launch, the America, was put on trial. It began its run at 8 o'clock and continued until six. There were aboard sacks of sand and passengers representing altogether 49 people. The America behaved in what was considered a splendid manner. In a round trip course of 3200 feet with two landings, she made the run on an average of ten minutes. This record would have been beaten but for the fact that part of the time poor fuel was at hand. While good coal was available the round trips were made in eight minutes. Stops were made at landings without difficulty and with smoothness and dispatch. The America is a steam launch 40 feet over all, with 9 feet beam. She draws, when loaded to her full capacity of 49 passengers, 36 inches of water. The boat is propelled by a 30 horse-power engine. The boiler emits neither smoke, steam nor noise, and the launch glides along smoothly at as rapid a rate of speed as may be desired. The official test is as follows: June 21, Columbia Launch Company's steamboat; June 22, Columbia Launch Company's electric boat; June 23, E. R. Meeker's steam launch; June 24, E. R. Meeker's electric boat; June 25, Electric Launch and Navigation Company's electric boat; June 27, C. P. Willard & Co's compressed air boat; June 28 Columbia Launch Company's cab boat; June 29, Mr. Gould's naphtha boat.

First Exhibit at the Grounds.

The first exhibit to be taken into the World's Fair was received at the Custom House last week. It consisted of 13 enormous logs containing 1534 feet of lumber. They come from Canada, having been chopped from the great Northern pines of Canada. Chief of Construction Burnham applied to Collector Clark to have the logs turned over to him, as they are needed at the grounds at once. All other exhibits which have heretofore been received have been stored in the bonded warehouses, there to be kept until ready to be put on exhibition, and Collector Clark doubted his authority to release the logs. However, as the logs are all free of duty, and the Collector was assured that there was ample police protection on the World's Fair grounds and no danger of any one stealing the logs, he decided to release them. An order to turn the logs over to Chief Burnham was therefore issued.

Designs for Memorial Coins.

Director of the Mint Leech was in Philadelphia on Friday and visited the Philadelphia mint for the purpose of consulting with Superintendent Bosbyshell regarding souvenir coins for the World's Fair next year. The director brought with him photographs furnished by the commissioners of the Columbian Exposition, from which the designs are to be prepared. The coins will have on the obverse side a bust of Columbus, and on the reverse side the United States Administration Building, Chicago, together with suitable inscriptions. The designs will be commenced at once, and when completed will be submitted to Director Leech and the Secretary of the Treasury for approval.

Pacific Freight Rates.

Traffic Manager Jaycox received a statement from the Canadian Pacific Steamship Company which was gratifying to the Exposition Company. The steamship line agreed to carry exhibits from ports of China and Japan to Vancouver at the rate of $10 per ton. If exhibits are sent with through bills of lading to Chicago, the rate will be $16 per ton, and if the ownership be unchanged they will be returned free. The $10 tariff is a reduction of 33 per cent. on the regular rate, and the free return makes the charges less than half rates each way.

The $6 per ton charge between Vancouver and Chicago, by way of the Canadian Pacific Railroad, is a still greater reduction. The lowest rate on any class of goods between those two points is $22, and the highest about $80. As the steamship company make no mention of classes, but merely denominate the shipments as "exhibits," certain kinds of goods will be brought to Chicago from the coast and returned for $6, whereas full tariff rates for the round trip would be $160 per ton.

Traffic Manager Jaycox thinks the Canadian railroad will eventually do a big business on exhibits from the coast. He says the line is in none of the associations, and is free to act as it may see fit. Its willingness to be a party to a low rate is evidenced by its terms with the Canadian Pacific Steamship Company.

Germany's Exhibit of Rarities.

Germany proposes to loan a collection of Columbus rarities to the United States Government for exhibition at the Chicago Exposition, as will be seen by a communication to the State Department from Consul General Edwards at Berlin. In this document Mr. Edwards says:

I have been authorized by a member of the Imperial German Commission to report that the German Government are prepared to loan for exposition purposes at Chicago all the works of art and every object or rarity called for from time to time by the different branches of the World's Columbian Exposition. This promise is, however, conditional that the loan shall assume the character of an international transaction, and be delivered by the German Government to the United States Government. It is proper that the German Government should assume the responsibility of collecting the rarities from the various galleries, museums and libraries in Germany, and that the United States should accept the collection and take it into its own hands here in Berlin and be responsible to the German Government for the safe transportation, careful management and prompt return to the German Government of the entire collection.

The German Government, appreciating the fact that no time is to be lost in this matter, has begun to carry its generous and friendly proposals into practical operation by instituting a thorough search in the various galleries, museums and libraries throughout Germany for works of art, objects and rarities which are in any way identified with the Columbus period, and which the German Government believe would be likely to be of general interest to the authorities of the World's Columbian Exposition as well as the visitors at that great show.

England and France Want More Space.

Sir Henry Wood takes a rosy view of the World's Fair situation in England. Sir Henry is secretary of the British Fair Commission, and he arrived in this country a few days ago to transact some exposition business. He told a reporter for the New York *Times* shortly after landing that there were sufficient applications for space from British merchants to fill half the great buildings on the fair grounds. It has not been long since communications were printed in leading British newspapers regretting the apathy of the merchants toward the fair, but Sir Henry says his primary object in coming to Chicago is to get more space in the buildings. He thinks there will be a better exhibit of manufactures here than there was at Paris or any previous exposition. But, owing to the McKinley Tariff law, he doubts whether there will be any display of Sheffield cutlery and certain textile fabrics.

On the subject of an English art exhibit the secretary is enthusiastic, and in view of the strong effort being made by the exposition people to secure such a display, Sir Henry's following statement is interesting:

I think I may safely say that we shall be able to make a powerful bid for the first place in our art exhibition. English artists have become thoroughly aroused to the importance of this matter, for there is undoubtedly no better market in the world for good pictures than the United States.

The French school of art seems to have thoroughly captured the people of this country, and the pictures of living French artists find a much readier sale here than those of English artists. The English painters have become thoroughly impressed with this important fact, and we have had their eager co-operation in the selecting of a really magnificent lot of paintings for the fair. The exhibition will be confined altogether to the paintings of living artists. At first we thought to secure a showing of the old masters, many of the finest examples of which are possessed by private owners in England, but we found that this would not be possible on account of the unwillingness of many of the owners to allow such precious works to undergo the risks attending their transportation by sea and land.

Even if we had secured them the insurance would have been altogether impracticable.

Moreover, an exhibition of modern paintings will be of more general interest, and will at the same time be of more commercial value to living English painters.

Three World's Fair Commissioners from France are now in Chicago to erect and decorate the building which will be the headquarters of France at the fair, and to complete arrangements for installing the French exhibit. They are Baron de Vialar, M. Rene Dubuisson and M. Henri Motte. They say that France will have an exhibit unrivaled by that of any other nation and that will eclipse anything of the kind ever previously undertaken by the French Government. They have asked for 200,000 square feet additional space. The French building is to be one of the finest of foreign structures, and decorated most artistically under direction of M. Motte, who is a celebrated painter and decorator.

To be Inspected at the Grounds.

The question of administering the customs at the port of Chicago on the goods imported for use at the World's Fair, which has been under consideration by the officials at Washington, was settled by the adoption of the policy suggested by Collector John M. Clark, who has received a communication to that effect from Assistant-Secretary of the Treasury Spaulding. Provisions will be made for the inspection of goods at the grounds by the World's Fair Directory, who will give a receipt to the Collector of Customs describing the goods, their nature and place of deposit, and at the close of the fair returns will be made accordingly. Exhibits will be received duty free, and what shall constitute an exhibit will be decided by the Fair Directory. Goods which are to be sold on the grounds will be stored in warehouses on the grounds, and duty paid as goods are drawn. Exhibits sold subject to delivery at the close of the fair will have duty collected when the purchaser takes possession. "Exhibits" are to be immediately placed in their proper department and kept there. This method, it is thought, will do away with the trouble experienced at Philadelphia, where the customs authorities collapsed entirely, from having neglected to draw a distinct line between exhibits and dutiable merchandise.

Passenger Rates for October.

Vice-Chairman Donald of the Central Traffic Association has issued a circular to members in regard to rates for the dedicatory exercises to the World's Fair, as follows:

At their meeting held in Chicago May 12, 1892, the Columbian Passenger Committee adopted the following basis for excursion fares to Chicago and return for the above occasion:

"From points within the radius of from 150 to 350 miles of Chicago, one and one-third of the regular one-way first class tariff rate; tickets to be sold October 9, 10 and 11 good for return passage up to and including October 15, 1892

"From points within 150 miles of Chicago, the rate to be one and one-third fare, and the selling dates October 10, 11, 12 and 13, good to return until October 14, 1892, inclusive.

"From points outside of the 350-mile radius, one regularly established first class fare; tickets to be sold October 8, 9, 10 and 11, or from distant territory on such earlier dates as may be necessary, good for return passage from Chicago up to and including October 16, 1892.

Brevities.

The great wigwam used by the recent Democratic Convention is being torn down and the material will be used in the construction of four World's Fair hotels for the Woman's Christian Temperance Union for the accommodation of working girls visiting the fair.

Director General Davis received information from Chief Willard Smith, who is traveling in Europe, concerning the interest taken in the Department of Transportation by foreigners. Chief Smith says the Laird shipbuilding firm will send a fine exhibit. The Cooks will prepare larger and better models of the Nile steamers than have ever been shown. An ancient Egyptian funeral barge will be exhibited, as well as many other interesting things from the Orient. The corporation of Trinity House will lend models. In France great interest was displayed.

The threatened strike of Western iron workers, Chief of Construction Burnham says, will have no effect on World's Fair contracts. The iron for all the big structures except the Manufactures Building is practically in place. Fifteen of the 22 great trusses are up and the iron for the smaller ones is on the ground.

The fly wheel of the engine in the temporary power house burst Monday night of last week. A fragment of it went through the wall of the Mines and Mining Building, while another fragment, which must have gone into the air 1000 feet, fell through the roof of the building, cutting a clean round hole through the roof and floor and burying itself in the ground.

An exhibit of bells will be made by a large manufacturing concern in this country, and the firm is planning to display it in a reproduction of the Tzar Kolokol (king of bells), the famous broken bell of Moscow, which is 22 feet in diameter and 21 feet 3 inches high, weighs 443,772 pounds, and is used as a chapel.

Japan has applied for space in the World's Fair Mines and Mining Building for a mineral exhibit. It will include a fine collection of the celebrated Japanese alloys and bronze preparations.

On Tuesday 1200 delegates and alternates to the Democratic Convention and their friends visited Jackson Park. They were shown over the grounds and given a luncheon by the exposition people.

Effects of Reciprocity.

The Acting Secretary of State sent to the Senate on the 20th inst. a voluminous reply to a resolution passed a few weeks ago inquiring as to the "practical effect" of the reciprocity negotiations. It was accompanied by statistical tables showing the population and commerce of the countries and colonies with which reciprocity arrangements have been concluded, and the growth of trade between them and the United States since what is known as the Pan-American movement began in 1884. The communication says:

It is proper to suggest that "the practical effect" of these arrangements cannot be measured by the commerce of a month or a year, for the result must depend not alone upon the character of the concessions secured by diplomatic negotiation, but by the degree to which they are utilized by private commercial enterprise. Before the full result of the reciprocity arrangements can be realized we must provide the means of transacting our own business independent of the ships and banks and capital of our commercial rivals.

A table is submitted showing that the number of letters sent to South America has more than doubled during the last five years, and that the weight of printed matter has been increased 300 per cent.

Although for the reasons stated it is scarcely just to measure, as it is useless to conjecture, the results that have, or may, come from the advantages afforded by the reciprocity negotiations, it is gratifying to note that there has already been a considerable increase in our exports, and that there is good reason to expect that it will continue and be permanent. It is equally noticeable, too, that the exports from Great Britain to the Latin-American countries are falling off with even greater rapidity, so much so as to excite the apprehension of her commercial organizations, and impel them to seek some means of protection from the Government.

The commercial arrangement with the British colonies was concluded, proclaimed and went into effect on February 1 last, since which date there has been a small but encouraging increase in our exports.

The similar arrangements made with Salvador, Nicaragua, Honduras and Gautemala have not been in operation long enough to justify the expression of an opinion as to their practical effect, although the advantages they offer the merchants, manufacturers and agriculturists of the United States are considerable and important.

From April 1, 1891, when the reciprocity arrangement went into effect, to March 31, 1892—12 months—the exports of domestic merchandise from the United States were $14,585,359, an increase of $1,052,573 over the previous 12 months, and of $3,307,640 over the corresponding period ending March 31, 1890.

A statement is furnished showing that the exports of domestic merchandise from the United States to Cuba during the seven months since the reciprocity arrangement went into effect were $11,607,438, as compared with $7,981,888 during the same period of the previous year, which is an increase of $3,625,550.

A statement is furnished which shows that the exports of domestic merchandise from the United States to Porto Rico were $1,524,862 since the reciprocity arrangement went into effect, as compared with $1,320,169 during the corresponding period of the previous year

There has been a slight falling off in our exports to San Domingo since the reciprocity arrangement went into effect, which is due to a universal financial depression which has affected that republic during the past year, but the decrease has not been so great as that shown in the exports of Great Britain, which amounted to only $186,270 during the first three months of the current year, against $380,945 for the first three months of 1891.

The enactment of the reciprocity section of the Tariff act of 1890, in connection with the Meat Inspection act, conferred upon the Executive the power, through negotiation, to very promptly secure the repeal of the prohibition upon American pork, which for ten years had practically excluded that important product from most of the continental countries of Europe. But it not only brought about this result. It likewise enabled the Executive to negotiate a reciprocity arrangement, first with Germany, and afterward with Austria, by which, in return for the free admission into the United States of sugar, we obtain the admission into those countries at reduced duties of a large list of American agricultural and other products.

Negotiations upon the lines of section 3 of the Tariff act have been in progress in the City of Mexico between the United States Minister and a special commissioner of the Mexican Government, but so far no satisfactory results have been reached.

The great eight-foot water tunnel, extending 4 miles out under Lake Michigan at a depth of 80 feet, has been completed. It was begun over four years ago and has cost over $1,100,000. When connected with the water works pumps it will supply 150,000,000 gallons of water per day to the city, bringing the total available supply up to 300,000,000 gallons daily.

Apparatus for Casting Cannon.

The apparatus for casting cannon, of which drawings are here presented, has been used in making 30 mortars at the Builders' Iron Foundry, Providence, R. I., and has proved to be highly satisfactory. It is the invention of Richard A. Robertson, Jr., of Providence.

The objects aimed at in this design were to relieve the opposing initial stresses, to prevent opposing lines of crystallization, to furnish an accurate and easy method of centering the core, and to lessen the waste of metal and cost of casting. An important part of the apparatus consists in the mechanism for the cooling of the casting uniformly at all times throughout its entire length from the bore outward, so that the lines of crystallization shall radiate from the bore normally to its contour at every point throughout its entire length while the casting is solidifying, whereby the intensity of the initial stresses is uniform throughout the entire casting. This result is accomplished by water forced first through a pipe inserted in a hollow core, extending entirely through and beyond the ends of the casting. Then the core, with its pipe, is withdrawn as soon as the molten metal has set, when the water is forced through another pipe inserted in the cavity of the casting made by withdrawing the core. This pipe extends through the cavity, its outlet being below the body of the casting. The continuing flow of the water in the core absorbs the heat from the interior of the casting to such a degree that the liquid mass solidifies first nearest the core and from thence outward. When the casting has solidified sufficiently to be "set" the core, with its pipe, is withdrawn and the water is then forced through the second pipe into the cavity or bore, and as it flows back to its outlet, it touches the surface of the bore at every part, thereby cooling the casting more rapidly by direct contact than if the core were retained and also more effectively producing the desired conditions in the casting. By this method there is no intersection of different lines of crystallization, the intensity of the initial stresses is made uniform, and the formation of lines of weakness is prevented at any and all parts of the casting. While the casting is being cooled, the radiation of heat from its exterior is retarded by fires kindled in the molding pit.

Old Method of Casting Cannon.

In the apparatus used for carrying out the old system of casting cannon, in which the method of cooling the casting from the interior was the basis, the core was suspended in the mold cavity and a considerable distance left between its lower end and the bottom of the mold. This core was held by a frame called a "spider" placed on the top of the molding pit. To center the core in the mold cavity this spider was adjusted—*i.e.*, its position changed—by means of screws in the spider's legs. The core being necessarily of great length, and thus having considerable leverage, a slight change of its position at the top made a much greater variation at its lower end and rendered the centering of the core in relation to the mold cavity a matter of great difficulty; also, its lower end being free or unsecured, any irregularity in the flow of the metal from the runners *t t* into the mold cavity deflected the core from its position, and consequently when the core was withdrawn the bore of the casting would be eccentric and the value of the whole casting in its relation to cannon destroyed—a not infrequent occurrence. Again, the buoyancy of a core of great length when held in suspension in the mass of liquid metal created a powerful upward pressure, and to prevent the displacement of the core the spider and the adjusting screws had to be made enormously strong, at a very considerable cost of time and money. In the cooling of cannon cast in this manner, the tendency of the lines of crystallization being to lie normal to the surfaces

APPARATUS FOR CASTING CANNON.

of the crystallizing mass, those lines extending from the sides of the casting diverged from those at the bottom of the casting at almost, if not quite, right angles, the result being that lines of weakness and irregular initial stresses were developed at the base of the casting. Again, the lines of crystallization from the bore near the escape pipe, which was inserted at a right angle to the axis of the core in one side of the "sinking head," intersected the lines from the pipe with unequal intensity around the pipe, producing severe initial stresses and lines of weakness in that neighborhood, while the process of crystallization, being unequal below and above the water level established by the pipe, also induced initial stresses of varying intensity. As a result, it was necessary to cut off a large part of the casting so weakened at its base, while the effect of the different stresses near the escape pipe was not only to crack the metal in the sinking head, but frequently so far longitudinally as to ruin the whole gun.

New Method.

The apparatus here illustrated overcomes these defects in the following manner: At the bottom of the usual mold A is placed a light metal pot or receiver, K, filled with sand, and in this sand is preferably molded a "print," so called, to exactly fit one end of the core B. This pot is held in place by sand thoroughly rammed around it, but so as to leave a rim or edge, H, of the pot projecting into the mold cavity. This pot is made slightly larger than the core B, so that the projecting rim of the pot will practically touch the outer surface of the core near its lower end, as shown in the drawings, Figs. 1 and 2. The position of the pot at the bottom of the mold is chosen so that the print and core will be concentric with the mold cavity. The core is lowered into the mold cavity until its lower end rests in the print or indentation, its upper end being steadied and centered by a light frame or spider, C, through which the core end is free to slide upward, but without any lateral change of position. Both ends of the core being thus secured from lateral movement by the spider and print, Fig. 1, it is self evident that the core is accurately and easily centered with relation to the mold cavity and that this central position cannot be changed during the process of casting.

While it is preferable to use a print in the pot, as described, for the greater accuracy in centering the core, still its use is not absolutely essential. It is easy to place the pot itself so that its position will be concentric with the core and mold cavity and have the projecting rim of the pot touching the outer edge of the core end, thus preventing its having any lateral movement. It is also possible to omit the sand from the pot and substitute in the pot a cone spindle, Y, or other suitable equivalent, which will come in contact with and center the core, substantially as shown by Fig. 3. The core having been lowered into the pot and centered in the manner described, a cylinder, G, is suspended from the spider in such a manner that it will inclose the upper end of and preferably be in contact, or nearly so, with the core, the lower end of the cylinder being depended into the mold cavity a sufficient distance so that it will be submerged in the liquid metal when the mold is full, Fig. 1. In this cylinder is placed an escape pipe, F, the position of which is such as to leave a considerable distance between it and the surface of the sinking head S of the casting. The use of the escape pipe is convenient, but not essential, as will be shown later.

The Operation.

In the process of casting, the liquid metal is introduced into the mold cavity, as usual, through the gates or runners *t t*, and attaches itself to or fuses itself with the projecting rim H of the pot K and also with the lower edge of the cylinder G, thus making them a part of the casting, Fig. 2. Although Mr. Robertson prefers this method of connecting the cylinder with the casting, it may be made a part of the casting or otherwise joined—*e. g.*, the cylinder may be lowered into contact with the casting, and after a reasonable time the connection can be "luted" at the surface of the casting. The next step is to force the cooling fluid through the pipe R in the core B, which was made hollow to carry the pipe and as a return conduit for the fluid, Fig. 1. After the core has been withdrawn from the casting the coo'ing fluid is next forced into the bore of the casting itself through a pipe, R', in the manner already described.

It is evident that a syphon, arranged as shown in Fig. 4, or other means may be used for creating a current in the cooling fluid throughout the entire length of the pipe.

The hollow formed by the print in the pot after the core is withdrawn (or the hollow pot itself if no print is used) allows the cooling fluid to flow beyond the lower end of the body of the casting, and the cylinder at the top of the casting permits the fluid to rise above the sinking head S and casting proper to the escape pipe F, Fig. 2, although this escape pipe can be omitted and the fluid allowed to flow over the top of the cylinder, to be thence carried off in any suitable manner without its touching the exterior of the casting proper, the main object being to keep the level of the continuous flow of water or fluid above the top of the sinking head. Since the cylinder and pot were described as touching, or nearly touching, the outer surface of the core, it is evident that when they have been made a part of the casting, as shown, the cooling fluid cannot touch any part of the casting proper except the bore, unless it be a very small part of the extreme outer ends of the casting at its top and bottom near the cylinder and receiver, as already explained, which part would be so small that the effect created would be so small that the effect created would be inappreciable in its relation to initial stresses and may be neglected. Hence it follows, the fluid having been carried entirely through the bore of the casting and beyond the casting proper at both ends, that the process of cooling will be uniform throughout the entire length of the casting from the exterior outward, that there is no opportunity for and hence no intersection of different lines of crystallization; that the intensity of the initial stresses is made uniform or regular throughout the casting, the formation of lines of weakness prevented, and consequently that there is no danger of losing a casting from these causes. When a print is used in which the lower end of the core exactly fits, or when the projecting rim of the pot fits closely to the outer surface of the lower edge of the core, none of the liquid metal can get beneath the core and create any upward pressure thereon. A very slight spider, non-adjustable, can therefore be used. Also the metal pot at the lower end of the casting, and which is lifted out with the casting, being light, is easily broken with a hammer, exposing the bore of the gun at once at its breech, avoiding the necessity of cutting off any of the casting. The cost of casting cannon is thus greatly lessened by this saving of metal, time and labor.

C. F. Bonney of the Bonney Rapid Vise Company, Marian, Ind., reports to *Crescent Sparks* that in hardening thin circular saws or cutters he has effectually overcome the trouble he formerly experienced from the saws warping out of shape. The method which he practices is to string a number of saws on a mandrel or bolt and set them up tight against each other by means of a washer and nut at each end, the washer being of a size to permit the teeth of the saws to project about ¼ inch, or to the depth of the teeth all around. The mass is then treated as if it were a solid cutter, and when separated the saws are found to be hardened deep enough for all practical purposes and to be straight. If the right degree of heat is employed, they need not be drawn.

Multiplying Trade Organizations.

The New York Board of Trade and Transportation keeps at its offices a register of commercial associations throughout the country, and endeavors to keep this list up to date and to restrict it to organizations representing national, State or local trade interests. Though not strictly complete, this list includes 1066 organizations, representing 48 States and Territories, or all except Nevada. At least three-fourths of the organizations are boards of trade, chambers of commerce and exchanges, which in name at least purport to be thoroughly representative commercial bodies; 27 are national associations, and many represent trade interests of a State or group of States. New York leads the list with 150 organizations, Massachusetts and Pennsylvania following; but of the 13 States that are credited with more than 25 trade organizations each, only four are Eastern or Middle States, and Ohio takes the fourth place and Texas sixth. The list arranged according to number of organizations is as follows:

New York	150	Louisiana	13
Massachusetts	89	Colorado	11
Pennsylvania	82	New Hampshire	11
Ohio	68	Vermont	11
Maine	46	Nebraska	10
Texas	41	Florida	9
Indiana	39	North Carolina	9
Michigan	39	Arkansas	8
Missouri	39	Mississippi	7
Illinois	38	Oregon	7
Minnesota	34	Washington	7
Iowa	26	South Carolina	5
Wisconsin	26	West Virginia	5
New Jersey	24	Montana	4
California	24	North Dakota	3
Connecticut	23	South Dakota	3
Virginia	23	Arizona	1
Maryland	20	Delaware	1
Tennessee	19	Idaho	1
Alabama	14	New Mexico	1
Georgia	14	Oklahoma	1
Kansas	14	Utah	1
Kentucky	14	Dist. of Columbia	1
Rhode Island	14	Wyoming	1

It will be seen that of more than 1000 organizations 194 are in the six New England States, and 257 are in New York, Pennsylvania, New Jersey and Delaware, while more than 500—more than half the entire number—are in the West and South. Most of these organizations have been in existence only a few years, additions of late having been very rapid. But in dealing with trade questions they exert an influence which cannot well be disregarded either in Congress or the State Legislatures.

At Niagara Falls there will be erected soon an observation tower. It is said that a stock company have been formed for that purpose. It will be of great hight, located on the American side of the river near the new Suspension Bridge, and just outside the reservation. Engineer Wallace has prepared plans for the tower, with the understanding that it will be finished during the present year. The tower will probably be of steel. It is also reported that corporation papers have been filed in Toronto by a company styling themselves the Eiffel Tower and Elevator Company, who will build an observation tower on the Canadian side 180 feet high.

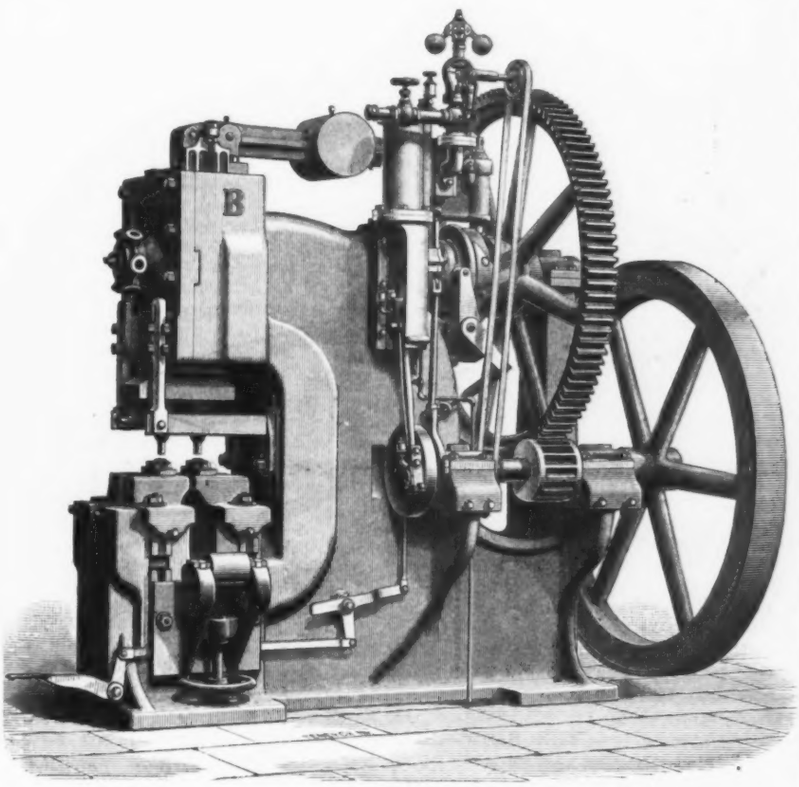
William R. Hutton, formerly chief engineer of the Hudson River tunnel, has filed a lien against property of the Hudson

Tunnel Railway Company (beginning at foot of Morton street and extending west to Jersey City) for $12,458 salary and disbursements.

Beam Coping and Punching Machine.

Our illustration shows a machine built by the Long & Allstatter Company of Hamilton, Ohio, and intended for performing various operations upon I-beams, channel bars, angle bars, &c. The machine shown in the engraving is fitted with two punches for simultaneously punching two holes in the flanges of I beams, but mere change of tools fits the machine for other kinds of work.

The die block is double and the I-beam is pushed between them with its flanges resting on the dies, an adjustable roller under the beam rendering the shifting easy. Each descent of the ram punches a hole in each flange at the top of the beam. The two punches and their dies are adjustable to and from each other to regulate the distance between holes, and they are independently adjustable in the other horizontal direction, so that the two holes instead of being opposite each other may bear any relation desired. The punches and dies are readily removed so as to be replaced by tools for punching a number of holes at once in the webs of beams, &c., or for any kind of punching in beams or plates, or by shear blades for any of the usual operations upon plates, bars, &c. This machine is also capable of forming complete the coped joints in beam work, channel work, &c. When this is to be done the punches and dies are replaced by a single set of coping tools, which perform the entire work of forming the coped joint. The machine is made in a number of sizes suitable for coping different sized beams, the largest machine coping beams 24 inches deep and below, while the smallest machine will cope 6 inch beams and below. Throat depths vary from 12 inches to 48 inches. The machines all have automatic stops which bring the tools to rest at any desired point of the stroke. The illustration shows the machine as self-contained, being provided with steam engine, thus only requiring steam connection to put it in condition for running, but the machines are also built to be operated by belt on tight and loose pulley.



BEAM COPING AND PUNCHING MACHINE.

Business is reported as unusually dull at Harrisburg, Pa., and vicinity. The local furnaces are out of blast, and, except in one or two instances, the iron and steel industries are feeling the effect of the depression in the market to the full. Most of the mills are running solely for the purpose of "keeping going," and giving employment to their workmen, hoping for better times and prices. The nail works are running to fill orders and little beyond, and orders are not extensive. There is a little business doing in steel plates, but almost entirely in small lots for present use, widely distributed. Large orders are almost unknown. At the same time several local concerns are building additions to their plant, showing that expectations for the future are not altogether unpromising. The Pennsylvania Steel Company are putting up a new slabbing mill at Steelton, the McCormick Company, a new sheet mill in connection with the Paxton Rolling Mills, and a large universal mill has just been finished on the Central Iron Company's works, while Lalance & Grosjean's plate mill, near Harrisburg, is well on the way toward completion. A new agricultural implement factory is also in course of construction at West Harrisburg.

Southern Africa is being penetrated by railroads at various points. Work on the Delagoa Railway has been resumed, and before the end of the year both Cape Town and Port Elizabeth will be in direct communication with Johannesburg, the great mining center. Two or three months later, Pretoria, the capital of the Republic, will also be joined to the outer world by rail.

War Ships Building in 1892.

The end of the Government's fiscal year 1892 is close at hand, and among the many developments toward the perfecting of systems for the permanent maintenance of our position among nations not one is more noteworthy or has made greater material progress during the past twelve months than the United States Navy.

A good way to clearly show this is to institute a comparison between our own naval shipbuilding programmes and those of other powers. To do this the more correctly and impartially we will make use of the facts and figures to be compiled from a study of "Brassey's Annual" for 1892, which within the past fortnight has made its yearly appearance in England, corrected up to date, and a review of which appeared in *The Iron Age* of June 16.

Navies are as a rule maintained with a definite object in view, some to take the offensive, some to take the defensive, according as they belong to the larger or less powerful maritime States. The general aim and policy being different in different countries, it follows that the general organization and programmes of shipbuilding will be found to differ widely. In order, therefore, to arrive at a proper appreciation of the state of any navy it is necessary to measure the efficiency of ships in the light of the various considerations which have been suggested above.

Speaking broadly, it may be stated that the navy everywhere to-day demands ironclads steaming 18 knots, of large coal-carrying capacity, with an armament well protected against the attack of rapid-fire guns, and with an efficient protection from shell fire and the terrible powers of the torpedo. Sea-going cruisers are asked for capable of steaming 20 knots and maintaining high speed for a long period.

Each country is laboring with an activity never seen before in a time of peace to increase its naval forces and to provide them with every improvement.

In considering the figures, &c., relating to the building projects as given in Brassey's tables the ships will be divided into the two great classes of armored and unarmored.

Of course, as all must admit, Great Britain heads the list without a rival. The armored tonnage she has in hand, laid down and completing, amounts to 134,200 tons, divided into two classes of ships—two of 10,500 tons each and eight of 14,500 tons each. The former will have 12-inch compound armor, the latter 18-inch. The first will mount four 10-inch guns in barbettes; the second four 13 inch guns. In the smaller ships the other guns are to be 4.7-inch rapid firers, while the bigger vessels will mount 6 inch rapid firers. The speed of the one will be 18 knots, that of the other 17.5. Last year England had in hand only 109,550 tons of armored ships.

In France there is also noticed an increase in the amount of armored tonnage building over that of last year. Altogether there are 94,840 tons of displacement being worked up into 14 ships; whereas last year the amount was 87,960 aggregate tons. There is much variety observed; from a couple of armored gun boats of 1045 and 1630 tons to big battle ships of 11,986 tons. Classifying the armored ships building, it is found that there are five battle ships with displacements each from 11,700 to 12,000 tons, thickest armor, 17½ inches of steel; speed, 18 knots; armament, two 12-inch, two 11 inch, eight 5.5-inch, and numerous smaller caliber rapid firers. There are two battle ships of 6590 tons each with the same thickness of armor and speed as above, but with fewer guns of the same caliber. There are four armored cruisers nearly 5000 tons each, protected with 3½-inch steel plates, mounting two 7½-inch guns and six 5½-inch rapid

firers. With forced draft, these armored cruisers should attain a speed of 20 knots.

Passing next to the armored ships building in Germany, it is found that there is a 10,000-ton battle ship on the stocks and four 3600-ton coast defense vessels have been laid down. These five vessels, aggregating 24,400 tons, represent Germany's progress, that is, what is on the stocks. In the water are two 10,000 tonners and a couple of coast defenders, none of which will be completed for a year or so.

Italy has been having some heavy financial crises, which have compelled a reduction in naval expenditure. She, therefore, stands this year in the same position as last year; that is, there is building one 13,250 ton battle ship of 18 knots speed and 18-inch armor.

Russia, like ourselves and France, faces two oceans, and as the distances which must be covered to unite her two fleets are very great, she endeavors to establish in both waters a powerful maritime influence.

She is building some 77,520 tons of armored vessels; one of these is to be of 12,500 tons; four are of nearly 11,000 tons each; one is of 8800 tons and two are of 4000 tons each, a total of eight armored vessels. The heaviest gun to be carried is a 12-inch, and the thickest armor 16-inch. The speed varies from 16 to 18 knots.

The armored tonnage building in other foreign countries than those above mentioned is inconsiderable. Denmark is busy over a 3200-ton turret ship, with 12-inch armor, two 10-inch guns and 15 knots speed. Holland has in hand a 4600 ton harbor-defense ship of 17 knots speed, with 11 inch armor and 11 inch guns. Sweden has a 3135-ton coast service armored ship on the stocks, to have 11-inch armor, 10-inch guns and to go 16 knots.

An exception to the above work of second and third class powers must be made in the case of Spain. Spain's policy being that of a defense of her colonies, is engaged in building several fine armored cruisers. Altogether there are five of them, three of 7000 tons each, and two of 9235 tons each, a total tonnage of 39,470. All these ships are expected to have a speed of 20 knots. Their armor belts will be 12 inches thick. Their largest guns will be 11 inches diameter of bore, with 5.5-inch rapid firers as the second caliber of the primary battery.

Now comes the turn of the United States, and in order to see ourselves as others see us and with the same impartial eyes that have looked on other navies, we again take the figures and facts as given in Brassey's tables and proceed to work them up. We then find that our new growing armored navy has rebuilding five monitors aggregating 21,320 tons. Four of these are of 3815 tons each, with 11.5 inches of armor, 10½-inch guns and 12 knots speed. The fifth is the old Puritan of 6060 tons, with like armor, guns and speed. Besides the monitors rebuilding there are the three battle ships of 10,230 tons each, a total of 30,690 tons, to have 18 inch armor, 13 inch guns, and 16 knots speed. To complete the list there is the 2050-ton ram, to have 6-inch curved armor and 17 knots speed. Thus we find that our coutry is engaged in constructing nine armored vessels of a grand total of 54,060 tons of displacement.

Arranging a table of total armored tonnage building and the average tonnage per armored ship for those nations that are working on more than one ship, we find the following:

Nation.	No. armored ships building.	Total tonnage building, 1892.	Average tonnage per ship.
England	10	134,200	13,400
France	14	94,830	6,800
Russia	8	77,520	9,700
United States	9	54,060	6,000
Spain	5	39,470	7,900
Germany	5	24,400	4,900

Though France leads in the number of ships building, she comes fourth in the average size per ship. Were the table arranged according to the average tonnage per armored ship building, the order of the countries would be: England, Russia, Spain, France, United States and Germany.

The work of the United States during the past year, so far as armored construction goes toward indicating great material progress among nations, has been sufficiently shown, and we regard it as decidedly creditable, all things considered.

It is now in order to see what has been done in the direction of bringing forward unarmored shipbuilding. As protection and guns are of secondary importance in unarmored cruisers, we will show where we stand among nations in cruiser construction by submitting the following table of unarmored ships building, compiled from the same source as the armored tonnage, Brassey's 1892 "Annual." The order of arrangement is according to the amount of total tonnage per country:

Nation.	No. unarmored ships building.	Total tonnage building, 1892.	Average tonnage per ship.
England	26	67,530	2,214
France	11	26,436	2,400
United States	6	26,143	4,050
Germany	9	19,590	2,175
Italy	8	15,326	1,900
Brazil	4	9,350	2,337
Spain	6	8,600	1,430
China	5	7,500	1,500
Japan	3	6,476	2,158
Russia	7	6,000	860

The figures for Russia are not of much value. It is difficult to ascertain the size of the new ships that have been begun this year, hence only those vessels are given that have been on the stocks some time.

A noticeable fact in the above table is that our size per ship is greater than that of any other country. France comes next, then Brazil, then England, then Germany, then Japan.

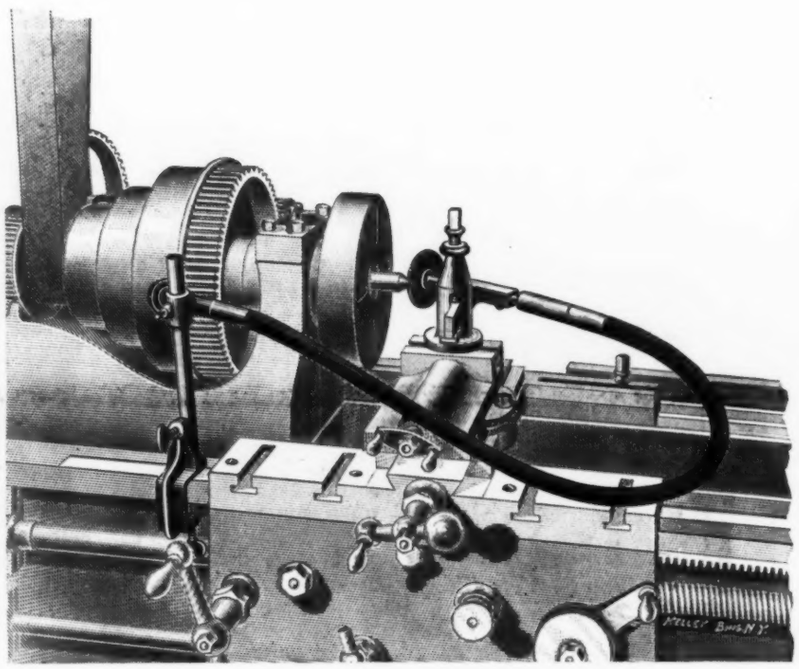
Finally, as a *résumé*, tables 1 and 2—that is, the armored ships building and the unarmored ships building—should be added together and a third table of total tonnages made up. This will give a correct exhibition of what has been going on for the past year toward bringing forward our naval shipbuilding policy, and what others besides ourselves are accomplishing. A table constructed on these lines will present a showing somewhat as follows:

Nation.	Rank.	Aggregate tonnage building of all kinds.
England	1	201,730
France	2	121,266
Russia	3	83,520
United States	4	80,203

With the rest of the world "nowhere."

The Stow Center Grinder.

Some time ago the Stow Mfg. Company of Binghamton, N. Y., had use in their own shops for an efficient center grinder, and designed the appliance here shown. The device worked so well that they decided to place it upon the market. It consists simply of a 3½-foot flexible shaft provided with a pulley at one end, the other end being attached to a sliding spindle holding a 3 inch emery wheel. The spindle turns in a tool post—same as an ordinary tool. The shaft is driven by the pulley on its end, being held in contact with the cam as shown. It can be as quickly set as any lathe tool, and can be used on any size lathe without additional attachments. The bracket holding the friction pulley is adjustable to any size lathe up to 36 inches.



THE STOW CENTER GRINDER.

The Amalgamated Association of Iron and Steel Workers at Pittsburgh, on Saturday morning, elected these officers for the ensuing year: M. M. Garland, president; J. C. Kilgallan, secretary; Stephen Madden, assistant secretary; Edward Kyle, treasurer. Three trustees of the association were to have been elected, but only two were chosen—John Pierce and John Gallagher. The delegates to the National Federation Convention are William Weihe, W. A. Carney and W. E. Hatton. William Weihe declined a re-election as president of the association.

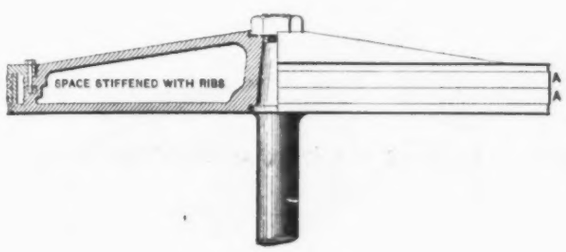
The new United States arsenal at Columbia, Tenn., the only institution of its kind in the Middle South, will be formally opened with imposing ceremonies on July 13.

Steel vs. Cast-Iron Pistons.

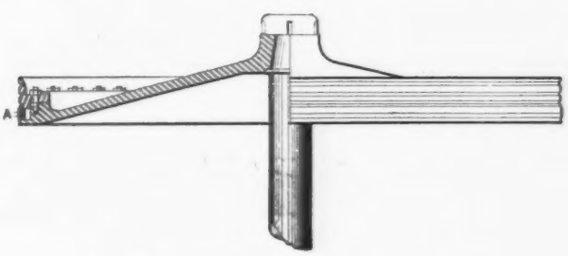
When it became possible to cast steel economically and with the same facility as cast iron, the mechanical engineer, appreciating the better qualities of the newer article, began simplifying the designs of such parts of the steam engine as were most cumbersome and bulky, and found the field for such improvement so widespread, and the number of details which would readily be benefited by a change of form so multitudinous, as to almost reform the general appearance of the completed mechanism. Hence, in spite of practical difficulties attending the production of perfect castings in steel, its adoption is not only very extensive but rapidly extending, and with an increased experience in the foundry, there is very little reason to doubt its almost entirely superseding cast iron, finally, for such work.

In the particular case of the steam piston, the difference between the old and new forms is a very marked one and serves as an excellent illustration of the effect which the change of metal has upon the general design. The accompanying sketches show this clearly, and it requires but a cursory glance to realize that there are many points of superiority in favor of the steel piston.

In bulk the new style occupies so much less space as to need no figures for verification, while the very fact of its having no core space, with its uncertainties and the attendant miseries of core plugs, is an advantage of no minor moment. Of course the weight of the steel piston is much less than that of the other, while its better shape gives it the required stiffness with less metal.



Old Style 72-Inch Cast-Iron Piston.



New Style 72-Inch Cast-Steel Piston.

STEEL vs. CAST-IRON PISTONS.

A striking point in the new design is the complete reformation in the width of the packing rings A. It will be observed that their width has been reduced to less than one-quarter of that of the old style, and yet the modern pressures are much greater than that which the wider rings were called upon to resist. This change is not due, however, to the adoption of steel, but incidentally comes in at this time, and is the result of long experience, wherein engineers have found that such broad bearing surfaces were not conducive to the best results. The piston itself is now turned to quite a close fit, and the wide follower is also made to give a fair bearing, and indeed, with its water grooves, forms a secondary packing surface, but the narrow rings are left to perform their own particular service of making a steam-tight joint against the walls of the cylinder, and to do this effectively it is not necessary to make them much wider than ⅛ inch each, or a little over an inch for the two contiguous rings. These rings are also made in several sections instead of in single rings. The latter form was not only liable to break, and expensive to renew, but the joint it made was in no way superior to that of the sectional form, which is fitted accurately and joined with tongue pieces in a perfectly steam-tight manner. The fitting of the piston rods is not changed in any important particular.

Completion of a Great Engineering Project.

On the 22d inst. the 4-mile water tunnel under Lake Michigan, at Chicago, was practically completed. On that day a junction of the lake and shore heads was made by the two gangs of workmen who have been steadily progressing toward each other for four years. The junction was effected 14,900 feet from shore. The tunnel is intended to supply the city of Chicago with water drawn from a point far enough out in the lake to insure freedom from pollution.

The first stroke of work on this tunnel was made on June 11, 1888. A few weeks previous to this the movement to increase the city's water supply and at the same time to free it from danger of sewage pollution had culminated in letting the contract for constructing a 4 mile tunnel to Andrew Onderdonk for $1,150,000, that sum including crib and shaft work, and the contract calls for the delivery of the tunnel in shape to open the ports.

From the shore shaft to the inside breakwater one tunnel 8 feet in diameter was bored. From this point the waterway diverges to two 6-foot branches. During the first 400 feet the tunnel courses are irregular on account of the experiments made necessary by the quality of the soil. But from the 400-foot point they follow a parallel course, the distance between them varying from 18 to 38 or 40 feet. At the government breakwater, which the tunnels reached in July, 1889, they were 18 feet apart.

On these lines they continued until a point 12,500 feet from shore, where they again combined to form one 8-foot bore. Shortly after this junction the engineers met one of the hardest problems they were ever called to solve. The 2½-mile crib (or inlet) had been located on the line about 13,500 feet from shore. Before that was reached a pocket of dangerous quicksand was struck. A detour was necessary. From the 12,500-foot point the 8-foot tunnel was carried in an elliptical curve 300 feet to the north and back again to the original line 14,900 feet from shore, the detour covering 2400 feet. In view of this deviation the junction effected last week with so much precision is considered a triumph of engineering skill. The pocket of quicksand was encountered on February 12, 1892.

Work from the lake head was begun at the crib (or inlet) January 13, 1891. Excavation progressed daily until the men pierced the last few feet of clay on Wednesday and stepped into the shore head. From the crib work was confined to one 8-foot tunnel.

The engineering skill that directed the picks came from the city office. When the work was begun, A. S. Artingstall was city engineer. After him Messrs. Northway, Cooke and Clarke have been in charge. The engineers in direct control of the work have been Bernhard Feind, William A. Lydon and F. F. Hopp. Mr. Hopp is one of the present staff. He and Mr. Feind solved the problem of the big detour near the 2½ mile crib.

The capacity of the new tunnel is 130,000,000 gallons daily. Present pumping facilities are 72,000,000 gallons in excess of the daily supply. City Engineer Clark estimates that the ultimate total supply of the old city, when the new tunnel is completed, will be 236,000,000 gallons daily. To this for the entire city are added 24,000,000 gallons from Lake View station and 60,000,000 from Hyde Park, making the total for the area inside the limits 320,000,000 gallons. The volume will be distributed among the stations as follows:

	Gallons.
Chicago avenue	86,000,000
Fourteenth street	54,0 0,000
West Side	36,000,000
Harrison street	60,000,000
Lake View	24,000,000
Hyde Park	60,000,000
Total	320,000,000

Mr. Clarke allows 20,000,000 gallons for a daily margin to cover stoppages for repairs, leaving a trustworthy supply of 300,000,000 gallons. "That will give an hourly supply of 12,000,000 gallons. It will be sufficient for the time at least, but that is all that can be declared, in view of the rapid growth of Chicago."

The tunnel will be ready to deliver water by October 1. With the excavation complete, there yet remains a large amount of work to be done in the way of cleaning up. Refuse has accumulated, tracks have been laid to convey materials, and false work has been erected. All this must be torn up and the walls cleaned as much as possible before the gates are opened.

With the 4-mile tunnel completed the department will be relieved enough to turn its attention in other directions. The north shore inlet, which it was expected to use as a temporary relief, will be extended to the old crib and the Chicago avenue tunnels will probably be carried out 2 miles beyond the present terminus.

The crib in which the tunnel ends is 20,963 feet from the shore. It has been in place for nearly two years and is sunk in 85 feet of water. The superstructure remains to be built and contract for that work will be let in a few days.

The miners at the Pratt Mines of the Tennessee Coal, Iron & Railway Company have signed the scale for the next 12 months. It is the same sliding scale as was in force last year and is based on a minimum price of 45 cents a ton. Three thousand five hundred miners were represented at the conference.

FIRE-PROOF CONSTRUCTION.

The importance of erecting fire-proof buildings is becoming each year more apparent. Architects generally, and real estate owners who have their own and the public interests at heart, are endeavoring more and more to lessen the risk of fire, and are planning and building edifices which are not only beautiful to look at, but which are designed to be perfectly fire proof. Heretofore, on account of the great cost of such construction, only a few of the largest, and those carrying the greatest risk of life or of valuable goods, have been made thoroughly fire proof. The cost, in a great measure, has been owing to the excessive weight of the floors and of the minor partitions, the former usually being constructed of heavy iron beams, filled between with solid brick, or with hollow terra cotta blocks loaded up to or above the top of the beams with concrete, making a weight of from 70 to 110 pounds for each square foot of the floor area, in addition to the weight of the iron beams; and the latter of solid or hollow bricks, weighing, with the plaster, from 35 to 55 pounds for each surface foot of wall. This enormous load of brick and concrete necessitates the use of very heavy beams, and of correspondingly heavy and strong walls and foundations. Nor has this construction proved effective in all cases where it has been put to a severe test. The late large fire in Boston is an example of this.

Iron Rods Embedded in Concrete.

Within the past few years experiments have been made with concrete in the form of slabs and beams, to test its ability to support loads and to take the place of brick arches. The result has been highly satisfactory. Its ability to support great weight without crushing and its enduring and fire-resisting qualities are well known. Its low tensile strength and liability to fail under tensile, or transverse, strain is also well known, and has hitherto prevented its use in the parts of buildings where tensile strength is required. These experiments have shown, however, that iron may be incorporated with the concrete, and can be depended upon for its full tensile strength under all conditions, provided the iron be well anchored at intervals in the concrete. If not anchored, and a heavy load were applied, the slab would deflect, causing the concrete to crack and

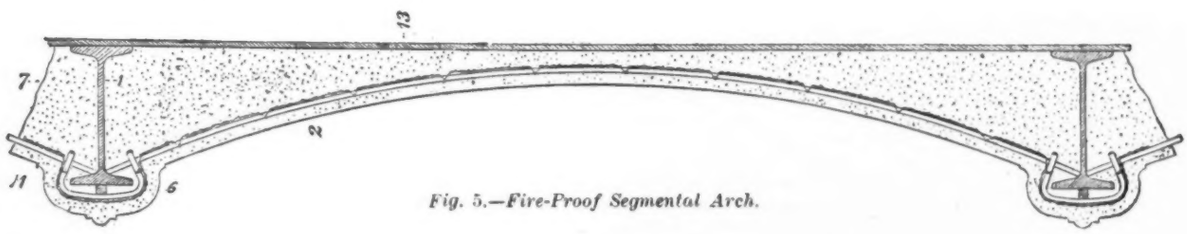

Fig. 5.—Fire-Proof Segmental Arch.

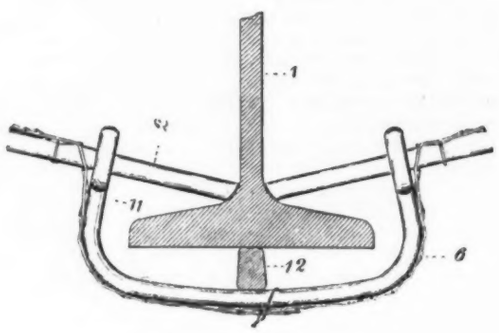

Fig. 6.—Enlarged Section of Beam of Fig. 5.

FIRE-PROOF CONSTRUCTION.

open on the under side (probably at or near the center of the slab or beam), the iron all the while slipping in the slab, and the crack opening wider, till the mass fell. The iron must be held rigidly in place to insure the best results.

the square foot. In segmental arches made by this method the safe load would only be limited by the strength of the beams and of the walls. This material is manufactured by the New Jersey Wire Cloth Company of Trenton, N. J., part coarse sand, and having five strips of flat iron $\frac{1}{4}$ x $\frac{5}{8}$ inch running lengthwise through it, the strips being punched at intervals to allow wires $\frac{3}{32}$ inch in diameter to pass through for anchors, the iron frame being imbedded near the bot-

Fig. 8.—Modification with Straight Ceiling Below Beams.

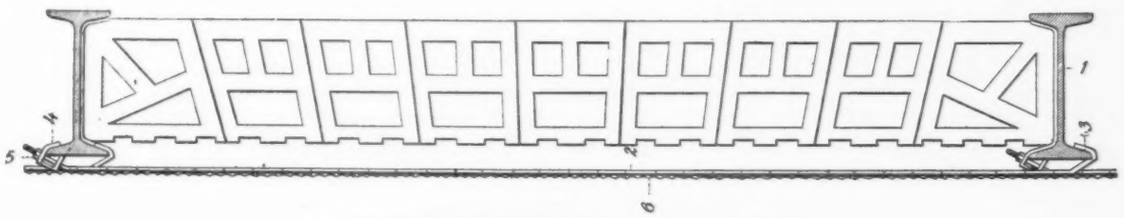

Fig. 9.—Lathing Applied to Beams to Make a Ceiling.

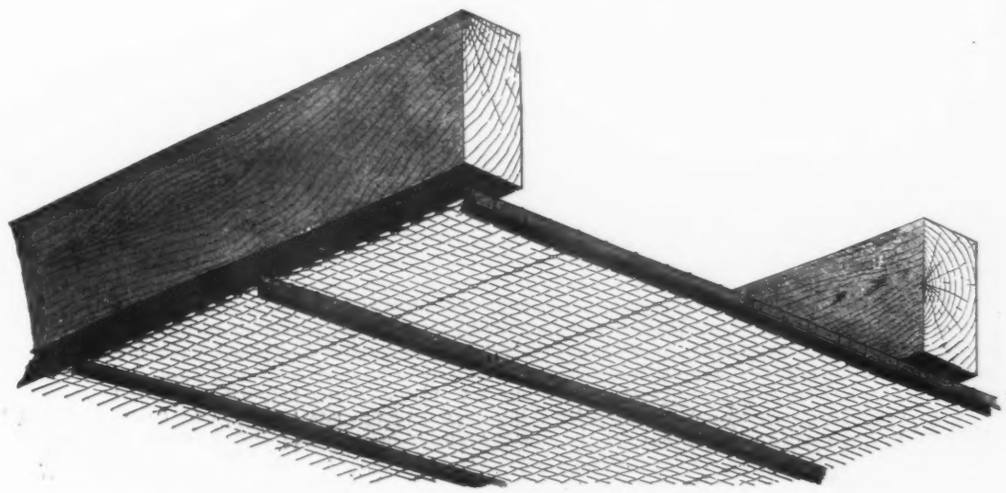

Fig. 10.—Ribbed Lathing to Wood Joists.

FIRE-PROOF CONSTRUCTION.

In the following we illustrate and describe a method of fire-proofing buildings by the union of concrete or mortar with iron wire and rods, supported by the beams and studding. This protects the iron beams and permits the construction of floors and ceilings impervious alike to fire and water and capable of sustaining, on flat arches with spans of from 4 to 8 feet, a load of from 100 to 300 pounds to

and is put on the market by the John A. Roebling's Sons Company of New York, Chicago and San Francisco.

Result of Tests.

Following is the result of a few of the tests made with slabs constructed of concrete strengthened by a framework of iron:

One slab, 12 x 24 x $1\frac{5}{16}$ inches thick, made of one part Portland cement to one

tom of the slab, which rested on 1-inch bearings, broke with a center load of 2750 pounds, or 3000 pounds for each foot of surface between bearings. None of the iron blades broke; the concrete crushed, the slab being so thin that the neutral axis was so near the top that the upper or compressive part or member of the slab was weaker than the iron strips which held the lower member together. The

deflection of the slab was about $\frac{7}{16}$ inch before it broke. Age of slab, 41 days.

Another slab, 54 x 54 x 3 inches thick, was constructed in a similar manner, but having 19 iron strips ¼ x 1 inch punched for ¼-inch wires. Composition of slab, one part cement, two parts sand. It was supported by bearing 3 inches at each end. This slab broke with a load of 36,375 pounds, equal to 2000 pounds per square foot. Deflection, ⅝ inch. All the iron strips broke on line of the wire nearest the center. Age of slab, 62 days.

Another experiment was made with a beam 7 x 14 inches in section and 10 feet 6 inches long. Through this, near the bottom, and running its whole length, were seven vertical blades; three were ¼ x 1 inch, and four ¼ x 1 inch, anchored with ¼ inch rods passing through holes in the blades. The composition of beam was cement, 1; sand, 1, for the 4 inches at top and bottom; and cement, 1; sand, 2, for the 6 inches of center. The beam was supported by 9-inch bearings. The weight required to break it was 53,654 pounds, all of the longitudinal blades breaking on the line of one of the cross wires. Deflection before breaking, $1\frac{3}{16}$ inches; deflection with load of 40,000 pounds, ⅝ inch; with 20,700 pounds, $\frac{1}{16}$ inch. Age of beam, five months. Had these last two slabs had the whole benefit of the tensile strength of the iron blades the concrete would no doubt have been crushed and the blades would not have parted, as there was iron enough to have stood twice the weight had it been properly applied. The holes made in the blades not only weakened them by the percentage of iron removed, but transferred the whole weight of the mass to what remained of the blades below the holes, giving them less than half the actual strength of the iron. Had half the amount of iron been used in the slabs in the shape of wire and rods rightly applied, the weight would not have been sufficient to part them.

Referring now to the drawings.

Construction.

Fig. 1 is a sectional view of two of the supporting beams of a floor, showing the ceiling construction and beam protection. The ceiling is attached to the beams 1 by rods 2. These rods are preferably made of hard-drawn iron or steel; at one end a hook, 3, is made to conform to the shape of the flange around which it hooks; the other end is screw-threaded; they are made long enough to reach from one beam to a little past the adjacent one, and are held in place by the hook 3 and by the clip 4, through which the rod passes, and which is made to hook around the flange of the beam, and is also arranged to offset the rod from the under side of the beam to provide an air space between the plaster and the beam. The clip is securely held in place and the rod drawn taut by the nut 5, Fig. 3. These rods are woven into or are otherwise attached to the metallic lathing 6, which constitutes the plastering surface, and may be either put up together in sheets or the rods may be all fixed in place and the lathing laced to them. The plaster may be put on in the usual manner, or a thin coat of concrete, 7, may be spread on from above; this may also be made to protect the beams and to imbed the hooked end of the rods and the clip. This imbedding of the hooks and clips would give the rod more power to resist tensile strain, as the concrete would prevent the straightening out of either under the strain, and would give the ceiling very nearly the full tensile strength of the rods. Rods made of No. 3 wire, or ¼ inch in diameter, and spaced 9 inches apart, would carry safely a ceiling load of 75 pounds to the square foot (the beams being 6 feet on center) without sufficient deflection to crack the plaster. If concrete were used in the construction, spread on from above, a finishing coat of plaster could be applied below, or the concrete could be smoothed off to give a finish.

Fig. 2 is of similar construction to Fig. 1, but is adapted to carry the floor load as well as the ceiling load. In Fig. 1 it will be noticed that the rods are the principal support of the ceiling, the wire lathing giving no supporting strength whatever. By carrying the ends of the sheets of lathing over the upper side of the lower flange of the beams, as at 8, Fig. 2, and imbedding them in concrete, there is added, when the concrete has become hard, the tensile strength of the longitudinal wires to the strength of the rods. The wires, however, depend entirely upon the concrete for the strength they add to the supporting rods. As has been noted in tests made with slabs, the thin slabs broke by the crushing of the concrete, and the thicker ones by the parting of the iron. This, Fig. 2, illustrates a method whereby the crushing strength of the concrete is made equal to, or greater than, the tensile strength of the wires and rods by the use of a minimum amount of concrete. The lower member is made of sufficient thickness to thoroughly imbed the rods and the wire lath and to lap well over the flanges of the beam, and is built up so as to fill between the flanges to protect the web. From this lower member are built up a succession of ribs, 9, at 2, 3 or more feet apart, as may have been determined upon (the ribs being easily and quickly made by placing light wood formers in position and pouring the concrete between), the width and depth of the ribs being determined by the amount of resistance to compression required.

Fig. 4 shows a section of this rib, with the wire lathing and one of the supporting rods embedded in the concrete, and one of the scantlings, 14, to which the floor is nailed resting on the top of the rib. The scantlings may either be laid at right angles to the ribs, as shown, or at right angles to the iron beams, the scantlings resting on the ribs with their ends wedged under the flanges of the iron beams to hold them in place.

Fig. 3 shows a half-size section of the lower half of a 10-inch beam with the supporting rods in position. The attaching clip 4 is more distinctly seen; and the manner of holding the rods offset from the beam, against the strain of the screw, by inserting strips or pieces of light T or other shaped iron, is shown at 10.

Fire-Proof Segmental Arches.

Fig. 5 shows the system of fire-proofing in the construction of segmental arches. The rods 2 are cut the required length to reach when bent into the required curve from web to web of the adjacent beams, their ends resting upon the flanges at their junction with the web; they are then either inserted between the meshes of the wire lathing 6 or otherwise attached to it, and the sheet, which would be 3 feet or more in width, would be bent to the curve required and sprung into place. A succession of these sheets placed side by side would fill the entire space from wall to wall, making a continuous network of iron wire and rods upon which the concrete could be spread from above without the use of any other support. The lower flanges of the beams would be covered by the wire lathing, attached to a succession of rods, 11, hooked over the arched rods 2, and held in place by the wedges 12, which are inserted between the beams and the rods. The plaster could be applied and an ornamental finish given to the under side of the beams at the same time the finish was being given to the under side of the arches.

Fig. 6 is an enlarged section of a beam, showing more clearly the arrangement of the rods to which the wire lathing is to be attached. By carrying the crown of the arch even with the tops of the beams and leveling up with the concrete a foundation is made upon which to lay tile floors, 13; or it may be arranged as in Fig. 3 for scantlings and a wood floor by making a flatter arch, so that the crown will be a few inches below the tops of the beams, and the scantlings laid on ribs of the concrete level with the crown and extending to the beams. The concrete at the crown of the arch in either case need not be more than 2 inches thick.

Fig. 7 illustrates the method of constructing cornices and of applying the ribbed lathing to the outer walls of buildings so as to leave an air space between the wall and the plaster. For the cornice is used a succession of light rods, 15, one end of which is attached to the rod 2 by a hook or an eye, and the other end to the wall by a nail with a washer under its head, the nail passing through a hook or an eye in the cornice rod and into the mortar between the bricks. The wire lath is then bent to the form of the rods and laced to them. In preparing the wall for the lathing a series of strips of flat iron, 16, is anchored to the brick work. They are spaced from 3 to 6 feet apart, as required, and are built in a regular line up and down the wall, care being taken to have the row at the corners at least an inch from the corner to give room for the hooks and clips of the supporting rods 2. The rods 2 are attached to the strips 16 the same as to the beams in Figs. 1 and 2, but they are not offset, the strips 16 giving all the offset required to secure an air space.

Fig. 8 is one of the modifications in the application of the ribbed lathing. This figure shows a method of construction with iron (or wood) beams whereby a straight ceiling is made below the bottom line of the beams, and a still further protection to the floor is obtained by a plastered surface extending from beam to beam, even with or above the top of their upper flanges. A, A, A are the beams, B planks resting on them and held in place by pieces of iron bent to about a right angle, a hole having been made in one of the angles through which a nail or spike may be driven into the edge of the plank; they are put on at intervals, one angle passing under the flange of the beam, as at 10. C shows the floor planks, and E the floor boards; *a* is a supporting rod for the ceiling and E the wire lathing attached to it for a plastering surface; *c* and F show the plastering surface on the line of the top of the beams; *b*, *b* are supporting rods or wires which may be used in very wide spaces to prevent any sag midway between the beams; they may simply pass over the beams and under the rods, as shown in this figure, or they may hook over the flange of the beam and into the rod.

Fig. 9 illustrates the lathing as applied to beams to make a ceiling where common or hollow brick arches, either segmental or straight, have been made to fill the space between them. Many architects will not allow a ceiling to be made directly on the bricks, on account of the liability of the plaster to drop off or become filled with unsightly cracks. In such cases a series of angle irons are bolted to the under side of the beams. To these angle irons the wire lathing is laced, and the plaster is applied to the lathing. By the use of the supporting rods about 50 per cent. of the cost and delay of this method is saved, and a safer and truer ceiling is made than with the angle iron.

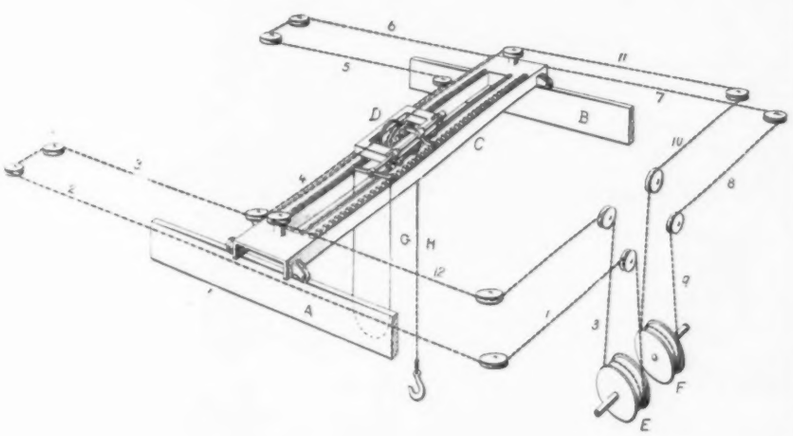
Fig. 10 illustrates the application of ribbed lathing to wood joists. The ribs, in this case, may be made of round iron, or of sheet iron cut into strips about 1 inch wide, and bent into V shape, longitudinally. The rods or strips are woven into the meshes of the wire cloth at intervals of 7½ inches. Half of the wires are on one

side of the rib and half on the opposite side, alternately, making it impossible for them to become detatched. These ribs project entirely on one side of the lathing, leaving the other a smooth, even surface upon which to spread the plaster. The lathing is secured to the wood by staples which embrace the rods and are driven into the joists or studding, if solid round rods are used ; or, if V strips are used, by nails driven through the strips and into the wood, or by staples over the strips.

(To be concluded.)

The Dixon Traveling Crane.

The Dixon crane belongs to the movable cable type, in which the movement of the bridge and trolley is occasioned by cables which act to positively pull them in the desired directions. The movements of the bridge or trolley, and also the lifting and lowering of the load, are accomplished, in the crane illustrated, by a single cable common to the bridge and trolley, to which cable movement is imparted by means of two driving drums, constituting a motor independent of the crane structure and preferably located at the "initial" end of the line. These drums E F are so arranged that they may



THE DIXON TRAVELING CRANE.

be rotated together in either direction or oppositely in either direction. They actuate a single continuous endless cable, the course of which may be found by following the numerals from 1 to 13. It will be observed that the cable traverses the bridge twice, the portion 11 12 encircling a windlass drum on the trolley, and the portion 4 extending along the bridge without attachment to the trolley, and running freely on sheaves attached to the respective ends of the bridge.

In order to move the bridge toward the driving drums, the latter are rotated together in the proper direction to exert a pull upon the divisions 11 12. In this movement of the bridge the trolley is stationary with respect to it, being subject to the equal opposite pull of the divisions 11 12. The bridge is moved in the opposite direction when the motion of the drums is reversed, the pull being then through the cable divisions 1 8. In a word, to move the bridge, both drums are rotated together in the proper direction, as if they were one.

The windlass drum on the trolley is normally locked against rotation by a detent mounted on the trolley and engaged with a toothed face on the end of the windlass drum. To move the trolley toward the right the drum F is rotated so as to pull upon the cable 11 and the drum E rotated in the opposite direction in order to effect release upon the cable 12. The trolley moves to the left, when the reverse of this rotation of the drums takes place. In the movement of the trolley the bridge is stationary. To occasion the lifting or lowering of a load the detent mounted on the trolley and normally locking the windlass drum against rotation may be retracted by a pull upon the pendent operating cord G, whereupon it drops into a notch of a rack extending along the bridge in proximity to the trolley track, and thereby locks the trolley against travel longitudinally of the bridge. The division 11 12 of the cable being, as explained, wrapped around the windlass drum, pull exerted upon the cable 12 by the rotation of the drum E in one direction and release of the cable 11 by the rotation of the drum F in the opposite direction will occasion the rotation of the windlass drum of the trolley and the taking up or winding upon the windlass drum of the depending rope H to which the load is attached. When the load has been sufficiently elevated the detent is rocked forward against the clutch face of the windlass drum to lock the drum against further rotation, and thereupon further pull upon the rope 12 and release of the rope 11 will occasion the travel of the trolley to the left, as described. To lower the load the detent is again thrown back into engagement with the rack on the bridge and the drums rotated to release the rope 12 and take up the rope 11. This crane is the invention of F. N. Dixon, 903 Walnut street, Philadelphia.

Treasury Decisions.

Nail rods—Steel horseshoe nail plates dutiable as.

Before the United States General Appraisers at New York, May 23, 1892. In the matter of the protests 22,268*a*-42,125 of Naylor & Co., against the decision of the Collector of Customs at New York as to the rate and amount of duties chargeable on certain so-called "shaped steel," imported per Didam, July 15, 1891. Opinion by Wilkinson, General Appraiser.

The goods are pieces of steel about 10 feet long, 2 inches wide, with both sides slightly hollowed, so that the metal is $\frac{3}{16}$ inch in thickness on the outer edge, and $\frac{1}{4}$ inch at the center.

The merchandise was assessed for duty at $\frac{8}{10}$ cent per pound as shaped steel valued at more than 1.4 cents per pound, under paragraph 146, N. T., and is claimed to be dutiable as nail rods at $\frac{6}{10}$ cent a pound under paragraph 147.

The pieces of steel are especially designed as material for the manufacture of horseshoe nails, but the appraiser reports that they are horseshoe nail plates, and not commercially known as steel rods.

The board, however, is of the opinion that the provision in paragraph 147 for nail rods, whether round oval, flat, square, or any other shape, is broad enough to cover the merchandise in question.

We find that the goods are nail rods not smaller than No. 6 wire gauge, and valued at less than 3½ cents per pound.

The claim of the importers is sustained accordingly.

Files.

Before the United States General Appraisers at New York, May 23, 1892. In the matter of the protests, 15,305*a*-30,810, of L. H. Keller & Co., against the decision of the Collector of Customs at New York as to the rate and amount of duties chargeable on certain files, imported per Aller, May 26, 1891. Opinion by Wilkinson, General Appraiser.

The goods are files more than 4 inches and less than 9 inches in length. They were assessed for duty at 75 cents a dozen, under paragraph 168, N. T., and are claimed to be dutiable at 35 cents per dozen, under the same paragraph.

We find that the files are commercially known as 4-inch files, but that by actual measurement they exceed 4 inches in length.

Paragraph 168 prescribes a duty of 75 cents a dozen for files over 4 inches and under 9 inches in length. We are of the opinion that the provision is for lineal measurement, and does not refer to commercial terms.

The decision of the Collector is hereby affirmed.

Carriage Bolts and Step.

Before the United States General Appraisers at New York, May 23, 1892. In the matter of the protest, 16,069*a*-16,014, of Adele Peugeot, against the decision of the Collector of Customs at New York as to the rate and amount of duties chargeable on certain carriage bolts, imported per Normandie, January 22, 1891. Opinion by Wilkinson, General Appraiser.

The goods invoiced as "Boutons de tirage," are of four kinds. Nos. 1 and 2 are wrought iron bolts about ½ inch in diameter and 6 inches long. There is a thread and nut at one end of the bolt, and at the other there is a head of the kind designed and commonly used for slipping on and holding a carriage harness trace. No. 3 is simply a bolt with a nut at one end and a common flat circular head at the other. No. 4 appears to be a carriage step, to which a heavy bolt has been welded.

The merchandise was assessed for duty, under paragraph 215, N. T., at 45 per cent., and is claimed to be dutiable at 2¼ cents per pound, under the provisions of paragraph 158, for "bolts, with or without threads or nuts."

We find:

1. That Nos. 1, 2 and 3, representing lines 1, 2 and 3 on the invoice, are bolts with threads and nuts, and the claim of the importer that the said bolts are dutiable at 2¼ cents a pound is hereby sustained.

2. That No. 4 is not commercially known as a bolt.

With the exception named, the Collector's decision is affirmed.

Structural Shapes of Iron.

Before the United States General Appraisers at New York, May 23, 1892. In the matter of the protest, 16,156*a*-1275, of J. Plentyt against the decision of the Collector of Customs at New York as to the rate and amount of duties chargeable on certain iron bars, imported per Wyoming, November 5, 1890, Opinion by Wilkinson, General Appraiser.

The merchandise consists of wrought-iron bars from 5½ to 13½ feet in length, with an average weight of about 22 pounds each. They were assessed for duty at 1.1 cents a pound under paragraph 136, N.T., and are claimed to be dutiable at $\frac{9}{10}$ cent a pound, under paragraph 137.

The bars are rolled into shape for use in the Helliwell system of building glass roofs and skylights.

We find that they are structural shapes of iron, and hold that they are provided for under paragraph 137.

The claim of the importer is sustained accordingly.

Composition Metal—Certain Yellow Metal in Sheets Not.

Before the United States General Appraisers at New York, May 23, 1892. In the matter of the protest, 20,450-32,521, of Piper, Doremus & Co., against the decision of the Collector of Customs at New York as to the rate and amount of duties chargeable on certain manufactures of metal, imported per Salle, June 27, 1891. Opinion by Wilkinson, General Appraiser.

The merchandise is a bright yellow metal made into very thin sheets or foil. It was assessed for duty at 45 per cent., under paragraph 215, N. T., and is claimed by the appellants to be dutiable at 1 cent a pound, under paragraph 192, as a composition metal of which copper is a component material of chief value.

We find, 1, that the merchandise is a composition metal of which copper is the component material of chief value; 2. That it has been carried by processes of manufacture beyond the character of metals known commercially as composition metals, and that it does not belong to the classes of metals known in trade as composition metals.

Paragraph 192 provides for "old copper fit only for remanufacture, clippings from new copper and all composition metal of which copper is a component material of chief value." We hold that the paragraph is no more applicable to the merchandise in question than it is to bronzes or other manufactures of copper alloys.

The decision of the Collector is hereby affirmed.

Pocket Knives.

Before the United States General Appraisers at New York, May 23, 1892, in the matter of the protest, 12,989b, of W. B. Belknap & Co., against the decision of the Surveyor of Customs at Louisville, Ky., as to the rate and amount of duties chargeable on certain knives imported per Spree, November 25, 1891. Opinion by Wilkinson, General Appraiser.

The goods are knives which were assessed for duty as pocket knives under paragraph 165, N. T. The appellants claim that the articles are agricultural implements, dutiable at not more than 45 per cent.

A sample of the merchandise in question is a well-finished pocket knife, not much larger than an ordinary jackknife, with one folding blade. The blade is curved and is evidently intended for budding or pruning. The knife, however, is intended to be carried in the pocket, and we find that it is a pocket knife, and we hold that it is provided for in paragraph 165.

Had there been good grounds for the importers' dissatisfaction, the protest must have been and is hereby overruled as indefinite, pointing out neither a positive rate of duty nor the clause of the tariff under which claim is made. The decision of the surveyor is affirmed.

Bowie Knives.

Before the United States General Appraisers at New York, May 24, 1892, in the matter of the protest, 20,951a-45,851, of Wiebusch & Hilger against the decision of the Collector of Customs at New York, as to the rate and amount of duties chargeable on certain bowie knives, imported per Wisconsin, August 27, 1891. Opinion by Wilkinson, General Appraiser.

The goods are bowie knives. They were assessed for duty as hunting knives under paragraph 167, N. T., and are claimed to be dutiable either as side arms, at 35 per cent., under paragraph 166, or as manufactures of metal at 45 per cent., under paragraph 215.

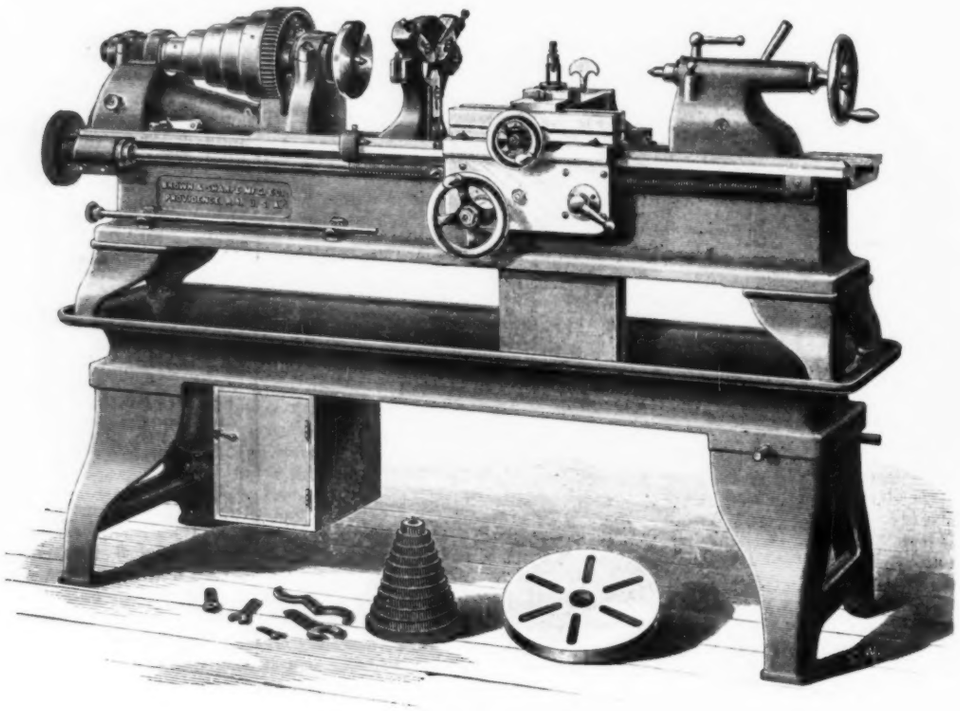
We find that the knives in question are not side arms, and that they are hunting knives. The decision of the Collector is affirmed accordingly.

The roller cotton compress is superseding old methods of baling cotton both on plantations and at shipping points.

Brown & Sharpe Engine Lathe.

In the 13-inch engine lathe here shown the spindle and boxes are of steel, hardened, ground and lapped, thus securing round bearings, accuracy in alignment and the greatest durability. The front box has means of compensation for wear. The thrust is taken at rear end of spindle, the bearing parts being hardened and ground. The hole through spindle is $\frac{1}{32}$ inch diameter. The cone has five steps for 2-inch belt and is strongly back geared. The back gears are placed under the head stock and are operated by a lever on the front.

The carriage is weighted and moves upon a V on front and upon a flat way on the back of the bed. It is provided with a friction feed operated by a simple lever device, on the left of the apron, by which the engagement and disengagement of the friction is made certain. It is also provided with an automatic stop by which the feed may be released at any desired point. Stops are permanently attached to the carriage and can be easily adjusted for cutting inside and outside threads. The ways and all flat bearings are accurately scraped for alignment.



BROWN & SHARPE ENGINE LATHE.

The screw is cut with great accuracy, and with the change gears all threads from 3 to 16 and nearly all from 16 to 48 per inch can be cut by direct gearing. Provision is also made for compounding the gears, thereby greatly increasing the range in the number of threads that can be cut. The split lead nut is opened and closed by a lever on the front of the apron. The foot stock is secured to the bed by a cam fastening, which can be quickly operated. The center rest is so constructed that the set screws for the jaws are entirely out of the way of the carriage when in any position. The hand wheels operating the carriage, cross-feed screw and foot-stock spindle are graduated on their hubs. The lathe is mounted on a tank table provided with a reservoir to collect oil, &c. This lathe will swing over bed 13 inches; over carriage, $5\frac{1}{2}$ inches, and will take 33 inches between the centers.

The swivel of the taper attachment is graduated to read degrees or taper in inches per foot. The attachment can be used in any position between the centers, and admits of any taper up to 4° or 2 inches per foot being turned; length of bed, 5½ feet. The lathe weighs, prepared for shipment, about 1650 pounds, and occupies a floor space 24 x 70 inches. It is made by the Brown & Sharpe Mfg. Company of Providence, R. I.

THE WEEK.

The Garbage Crematory Company in Buffalo have bought $20,000 worth of new machinery and will increase the capacity for consumption to 50 tons a day.

The formation of a linseed oil trust, while it enabled a number of unprofitable concerns to sell out to advantage, had the effect in course of time to bring into existence new competitors, so that the scheme is a failure. More than this, the increased cost of flaxseed entails the loss of a large portion of our export trade in manufactured paints and other articles in which linseed oil enters largely as a constituent.

The Poughkeepsie Bridge will be sold to day under foreclosure, and it is expected that the new company will be organized and ready for the transfer of the property to the Reading management early in July.

The city of Manchester, England, purpose erecting a technical school building that shall have no equal in the world.

Shops for the Illinois Central road are in course of erection at Burnside, near Chicago, upon which $500,000 will be expended this season and $2,000,000 when all is finished.

The Jersey City terminal station of the Pennsylvania Railroad is now almost entirely complete, except the mechanical apparatus providing for the movement of passengers between the bridge and upper deck of the ferry boats, which is somewhat intricate because of the necessity of adjusting it to the varying hights of the tide. The shed, which attracts special attention, is built entirely of iron, is 652 feet long, 256 feet wide, and 85 feet in hight above the tracks, and covers nearly 4 acres.

Canadian bankers in their annual statements to their stockholders refer to bountiful crops of the past year, which only in part have been marketed and, therefore, are not yet felt in the trade. In lumber the stock exceeds that of the previous year, and there has been an excellent market with some advance in the United States. On the other hand the waning of the real estate boom and decrease in building operations causes much dissatisfaction.

La Liberté says that commercial conventions on the basis of the French minimum tariff will shortly be concluded between France and Honduras, and between France and other South and Central American republics.

The export of over $7,000,000 gold in a single week would excite comment at any time. Just now it is regarded as of unusual importance in some quarters because of the compulsory silver coinage law. It may be well to remember that in May last year the exports of gold were $30,500,000, and in June nearly $16,000,000, so that there is nothing surprising about the efflux now in progress. From February to July last year, inclusive, the exports reached $77,000,000, as against $34,000,000 thus far this year.

San Francisco papers make some reference to the reduced rates of freight by vessels going round the Horn between that port and ports on the Atlantic Coast. Competition by sea must be unusually severe, judging from the fact that very recently as many as 29 vessels, comprising 50,000 tons, were *en route* or on berth for San Francisco, all but ten of them hailing from New York. The San Francisco *Commercial Herald* says: "Freights on general cargo from New York have been reduced to $7 per ton, or about ¼ cent per pound. This leaves, say, 1 cent in favor of this city on all goods that do not lose in value by a three or four months' sea voyage. In these this city will immediately become an entrepot. The same is true of goods shipped back to New York. As to merchandise that must needs be sold at a certain time or not at all it must needs be brought overland at any figure that the public will pay. Here, again, houses of very large capital have an undoubted advantage." There are now five shipping firms in the trade around the Horn, including two recent additions.

New York and Liverpool are both enlarging their docks to accommodate vessels 700 feet in length.

Taking the whole South together, crop reports have seldom been more thoroughly satisfactory. Of the wheat and corn regions the same remark holds true.

While Venezuela has Dr. Villegas for a new President, there is hard fighting in the State of Matta Grosso, in Brazil, with "no quarter" on either side.

Says the New York *Commercial Advertiser:* "Is the supply of silver infinite that the silver men should be so wasteful with it? Why the extravagance of putting 69 cents in a 100-cent dollar? If 69 be equal to 100, what's to prevent 25 from equaling 69? Why, in one word, put more than 1 cent's worth of silver in a dollar? Why waste 68 cents of so precious a metal?"

While Louisiana promises a sugar crop larger than last year's, the crop in Matanzas has been badly reduced by wind and flood.

The drought in Texas on the lower Rio Grande frontier and in northern Mexico continues with undiminished severity.

Judge Daly, in an action brought by the Sinking Fund Commissioners, cuts the appraisement of the Union Ferry Company's property down to $3,229,401, a reduction of $573,599.

The new Stewart hotel to be erected on Broadway and Forty-first street will be fire proof and cost $300.000. Iron girders and columns will be bolted together in the frame work to secure absolute rigidity.

By the rules of the new building law of Boston just passed by the Legislature no building can hereafter be erected in the city of Boston in excess of 70 feet in hight unless it is built throughout of non-inflammable material, with floors constructed of iron or steel beams filled in with terra cotta or other masonry arches. The maximum limit of hight is 125 feet, and the fire-proof warrant must be backed up by facts.

The investment of £4,000,000 made by the British Government in the Suez Canal shares will in a year or two, according to Mr. Goschen, be worth £19,000,000, which proves it to have been an excellent stroke of business as well as of diplomacy.

The Western Iron Ore Association are much incensed by the removal of the lights in St. Mary's River and ask that they shall be restored.

During this calendar year the imports of Russian wheat into the United Kingdom were 90,000 hundredweight, against 6,243,000 hundredweight last year. The imports from India were 4.447,000 hundredweight, against 3,431,000 hundredweight in 1891. The imports of wheat from the United States, which was the principal source of supply, were 11,267,000 hundredweight, against 5,727,000 hundredweight.

At the suggestion of the president of the Sugar Trust the wholesale grocers of Pennsylvania, New Jersey and Delaware have formed an association to sustain prices and in return are entitled to a rebate.

It is reported that in about three months actual construction will begin on the new coast line railroad, the Norfolk, Wilmington & Charleston. It is contemplated to have the line completed through from Norfolk to Charleston, some 352 miles, in about a year and a half, and the 250-mile branch from Kingston, N. C., to Columbia, S. C., a year later. The capital stock of the company is $10,000,000, and the authorized bonded debt $10,000,000.

Two locomotives for Sweden have just been shipped from the Baldwin Locomotive Works. They are of the mogul type, with 16 x 24 cylinders, and cost $9000 each, delivered. The weight of each engine is 68,000 pounds.

The trades school of the Master Builders' Exchange in Philadelphia has graduated its second yearly class, 41 young men receiving certificates.

The bursting of a boiler on one of the new French cruisers killed 15 men.

The Germans have had three severe military reverses since they started their trading colony on the east coast of Africa.

The big leather firm in Boston, Allery Brothers & Place, who failed a year ago for over $500,000, have paid their creditors in full with 6 per cent. interest.

Philadelphia desires to encourage foreign commerce; yet two steamers have been waiting in the Delaware River since early in the month for want of wharf accommodation.

American petroleum has suffered in Japan for a year past by Russian competition.

During the month of May there were launched from Scotch shipbuilding yards 32 vessels, aggregating 26,968 tons, as compared with 26,590 tons in the corresponding month of last year.

A new passenger and freight line from Philadelphia to Liverpool is contemplated by the Reading Railroad Company in addition to the freight line to London already running.

Recently there was a notice of filing of a judgment against the National Chuck Machine Company, the predecessors of the National Chuck Company. As this is likely to cause some comment, it should be noted that this judgment in no way affects the latter company, which is controlled by William Whitlock, who bought the plant and effects from the receiver of the National Chuck Machine Company, and is conducting the business under the style of the National Chuck Company. They are moving their factory to 132d street and Park avenue, New York City, where they will be in operation in a few days with improved facilities.

D. C. Templeton, widely known in the Northwest through his connection with the plow and other agricultural implement interests, has accepted the agency for the Ahquippa Steel Company of Pittsburgh, and established an office in room 939, The Rookery, Chicago. The company will manufacture Plate and Sheet Steel, Soft Center Plow Steel and other Steel Products.

The Iron Age

New York, Thursday, June 30, 1892.

JOHN S. KING, - - - - BUSINESS MANAGER.

The Copper Combination.

On the whole, the comments made by those authorities in the copper trade who are not directly connected with the producers are unfavorable to the international agreement. which to some extent partakes of the character of the "gentlemen's understanding," at one time conspicuous in another leading American industry. The great mining companies on both sides of the Atlantic have come together and have practically decided not to crowd the market too much. According to English advices, the European companies, representing about one-half the total production, have agreed to place a limit on their production, in some cases reducing by 5 per cent. that of the year 1891, while in others they have been allowed an increase, amounting in one important instance to 10 per cent. We believe that this deals practically with the large Spanish mines. At first the Europeans held out for some promise that the exports of American copper be placed at a certain maximum. This, as we understand it, they failed to carry, so that they must be content with hoping for the best in view of the restriction of the American mines. It is reported that nine companies, controlled by five interests, have undertaken to keep their output for one year from July 1 down to 226,000,000 pounds. These are the Anaconda with 75,000,000 pounds, the Calumet & Hecla with 60,000,000, pounds, the Bigelow-Lewisohn with 65,000,000 pounds, the Parrot with 14,000,000 pounds and the Quincy with 12,000,000 pounds. This includes the majority of those who place large quantities of copper abroad. As we pointed out some time since, these interests made in 1891 204,000,000 pounds, so that the "restriction" did not look very formidable.

We believe, however, that the record of the first six months of the current year will show that as a matter of fact a yearly product of 226,000,000 pounds is very much below the rate which they have been running at, and that full work would carry the figures higher still. We have the data to estimate the product for the first six months of 1892 of the Calumet & Hecla, Quincy, Tamarack, Osceola and Kearsage on Lake Superior, and the Anaconda, Boston & Montana and Parrot, at not less than 140,000,000 pounds. For the greater part of the time the Butte & Boston was idle. With that plant going and all the others running at full capacity, the interests alluded to would put on the market during the year beginning July 1, 1892, not less than 300,000,000 pounds of copper. If they adhere to their agreement to produce only 226,000,000 pounds, they will keep the European market from a very dangerous collapse.

At first blush this arrangement of a few interests, leaving out very important groups of mines, may seem a very weak one. But it must not be forgotten that they are practically the ones which are the heavy exporters. Really the only great concession has been made by the largest Montana concern, and generally speaking, the producers of the Butte district are in a position where it is imperative with them to export largely. There are not in this country now refining facilities large enough to take care of all the Montana matte made, not to speak of the material which would be produced running full. A large share of the product must go abroad, and if the American mines were to go on at their full rate they would swamp the European market, which would very seriously react on our own.

It is well known that this condition of affairs will not continue indefinitely. The leading Montana concerns are now getting ready to do their own refining by building electrolytic plants. The large establishments which this calls for cannot be created in a day; in fact, years may elapse before they cease to ship their matte to foreign countries. But the day is coming when the exports of copper matte will be as unimportant as those of ore now are, and American copper will go out in ingots, wire bars and slabs. Then the American mines will be the absolute dictators in the world's copper markets.

Indorsing the World's Fair.

The managers of the World's Fair at Chicago have accomplished a neat stroke of business in securing the indorsement of the two great political parties to their appeal for national aid. The Republican National Convention at Minneapolis, on the 9th inst., adopted the following resolution as a part of their platform:

> The World's Columbian Exposition is a great national undertaking, and Congress should promptly enact such reasonable legislation in aid thereof as will insure a discharging of the expense and obligations incident thereto and the attainment of results commensurate with the dignity and progress of the nation.

The Democratic National Convention at Chicago incorporated the following plank in its platform on the 22d inst.:

> Recognizing the World's Columbian Exposition as a national undertaking of vast importance in which the general Government has invited the co-operation of all the powers of the world, and appreciating the acceptance by many of such powers of the invitation so extended, and the broad and liberal efforts being made by them to contribute to the grandeur of the undertaking, we are of opinion that Congress should make such necessary financial provision as shall be requisite to the maintenance of the national honor and public faith.

These utterances would appear to commit both parties unequivocally to the support of either the bill formulated by the World's Fair Committee of the House of Representatives or something akin to it. Such an expression of popular approval as each party has thus made would seem strong enough to overcome any fear that the body of the people are opposed to a liberal appropriation for the fair. Members of Congress may, it is true, regard these conventions as irresponsible organizations, while they, on the other hand, are especially intrusted with the management of the affairs of the Government. But it would hardly be possible to get the sense of the people on this question as satisfactorily as through these two great conventions. We have here every section of the entire country represented, and by both parties. The unanimous adoption of the resolutions in both cases would therefore appear to have very great weight.

Cost of Pig Iron.

With so many furnaces out of blast all over the country, it seems almost ridiculous to speak of profits in manufacturing pig iron. Most furnace managers will say that profits are out of the question, and that losses would be the correct term to use in connection with the results of the business. The logical deduction from the numerous idle furnaces is, of course, inability on the part of owners to figure out a profit on operating. This is undoubtedly true in the case of a large majority of the idle furnaces, and perhaps with some in operation if the facts were known. Yet it must be admitted that among those who are now making pig iron less complaint is heard of inability to produce at prevailing prices than of marketing it when produced. We are not violating confidence when we say that figures of cost which have been given us by furnacemen in various localities, East, West and South, show that a fair return could even now be realized on their output of pig iron if the market would only take all of it. In corroboration of this statement we have but to refer to the recent annual report of the Tennessee Coal, Iron & Railroad Company, who made more money in their fiscal year ending April 1, 1892, than in any preceding 12 months of their existence; to the statement of the cost of anthracite pig iron published in *The Iron Age* of May 26, and to the blowing in of furnaces in different parts of the country within the past month. Furnaces once blown out would hardly be started up at such a time as this if their owners did not see their way clear to the production of pig iron at a profit.

The situation is a curious one in this respect. Prices have fallen to figures previously unknown in the history of the American iron trade, but economies have evidently been introduced which have kept pace with the downward tendency of prices Ores are lower, freights on raw materials have been modified to some extent, labor has been reduced, but not seriously cut, and concessions on fuel are claimed to have been made by coke manufacturers. Those who are dependent on the Connellsville coke region for their fuel supply have not been favored with a reduction, but are so urgently demanding it, and with so much justification on their

part, that it is difficult to see how their claims can be refused. The adjustment of such inequalities as this will serve to put pig-iron makers on a better basis to endure the era of low prices now on us.

Persistent attempts are being made to create the impression that the men in the rolling mills are being ground to the level of wretchedly paid laborers by their grasping employers. Wage percentages are being paraded to enlist sympathy, while no reference is made to the circumstances which have gradually worked up the pay of tonnage men in spite of the constant decline in selling prices. A few figures will best tell the story. At a well-equipped mill in western Pennsylvania, working under the Amalgamated scale, the following wages were paid in the finishing department during the year 1891:

Seven-Inch Mill, 422 Turns.

	Total.	Per turn.
Roller	$5,826.98	$13.81
Heater	2,914.49	6.90
Catcher	1,457.24	3.45
Rougher	1,457.24	3.45

Ten-Inch Mill, 468 Turns.

	Total.	Per turn.
Roller	$9,248.44	$19.76
Heater	4,624.22	9.88
Catcher	2,312.11	4.94
Rougher	2,312.11	4.94

Guide Mill, 514 Turns.

	Total.	Per turn.
Roller	$7,160.32	$14.93
Heater	3,580.16	7.47
Catcher	1,790.08	3.73
Rougher	1,790.08	3.73

Bar Mill, 276 Turns.

	Total.	Per turn.
Roller	$2,146.66	$7.78
Heater (two furnaces, 552 turns)	3,220.00	5.83
Catcher	1,180 66	4.28
Catcher's rougher	843.33	3.05
Rougher	1,073.33	3.90

In all, the crews on these four mills were paid $52,939.45 during the year, and the earnings of each per turn certainly show that what is really not a very high order of skilled labor is exceedingly well paid.

The rainfall in Chicago and vicinity during the present month has been phenomenal up to the 25th inst. The amount of precipitation in June was 9½ inches. This surpasses all previous records for that district, the monthly average rainfall being but 2½ to 3 inches. In fact, the June record would for the time place Chicago in the list of localities in which the rainfall is excessive. The rain storms were accompanied by peculiar and destructive electrical phenomena and in frequent instances by violent winds of a cyclonic character. Great damage has been wrought by the flooding of basements, the bursting of sewers, &c., while outdoor work was seriously interrupted. The month of May was also rainy, stormy and destructive, the total downpour of that month having been nearly 7 inches. The lake region has not had its usual amount of rain for several years, and 1892 seems likely to bring up the average at once, much to the discomfort of those who live and conduct business operations in that section.

CORRESPONDENCE.

S. D. Brewer and the Hussey Re-Heater Steam Improvement Company.

To the Editor: It having been brought to my attention within a day or two that printed matter is being circulated wherein my name appears as general manager of the Hussey Re-Heater & Steam Improvement Company, I would state that I have not been connected with that company for two years.

For your further information I would advise you as follows:

In 1888 Mr. Hussey patented two reheaters for reheating exhaust steam. These reheaters were manufactured and sold by Mr. Donaldson and Mr. Hussey conjointly; afterward by Mr. Donaldson, and in 1884 by the Donaldson Heater Company, of which I was secretary. Within a few months I, individually, secured the exclusive right to manufacture and sell them.

In 1888, on the strength of certain promises, I organized, with others, the Hussey Re-Heater & Steam Plant Improvement Company, of which I was general manager. But after two years with the company I resigned as its general manager, at the same time withdrawing such interests as I had, and since then I have had no further connection with it.

I intended at the time to open an office for the continuation of my business, but while making the necessary arrangements I concluded to spend a short time in the electrical business, since I knew very little about electricity and realized that it was to play an important part in the steam business. I entered the Edison Company, and only recently left it.

How long my name has been in the manner mentioned I do not know, but I wish, even at this late day, to state that I am not interested, either directly or in directly, in any business except my own.

Very truly yours, S. D. Brewer,
Hussey Re Heater System.
New York June 18, 1892.

The Magnetic Separator Suit.

To the Editor: In the issue of *The Iron Age* of June 23 we noticed a communication from the International Ore Separating Company by Harvey S. Chase, treasurer, denying the fact of a suit having been brought by the Magnetic Separator Company against the International Ore Separating Company for infringement of certain patents on ore separators and processes of separating ores owned by the former company. Notwithstanding the denial, the fact remains that suit was brought by the Magnetic Separator Company in the United States Circuit of New Jersey, as stated in your issue of June 9 or 16, the complaint having been filed with the court at Trenton, N. J., and the subpœna issued May 16, 1892.

The motive of the defendant company in denying the fact of the suit having been brought is not fully apparent to us. Some difficulty has been encountered by the United States Marshal in obtaining personal service, but such service cannot long be evaded. We have taken pains to procure certified copies of the bill of complaint and subpœna from the files of the court at Trenton, N. J., and herewith inclose the same to you.

Very truly yours,
The Magnetic Separator Company,
By C. M. Ball, Manager.
New York, June 24, 1892.

The regular meeting of the Western Pennsylvania Engineers' Society of Pittsburgh was held in that city on Monday evening the 20th inst., Capt. A. E. Hunt in the chair. W. L. Scaife of Pittsburgh read a paper on Rail Joints of Railroads. The paper was descriptive of the various styles of rail joints in use on different railways and of the different uses made of the angle irons used at the joints. At the conclusion of the reading of Mr. Scaife's paper the members present indulged in quite a discussion of it. No further meeting of the above organization will be held until September next.

The Sheet Scale Adopted.

As we announced in *The Iron Age* of last week, the Conference Committees representing the Amalgamated Association of Iron and Steel Workers and the Iron and Steel Sheet Manufacturers' Association have agreed on a wage scale, governing wages in sheet mills for 1892–93. Some concessions were made by both sides, and a scale had finally been adopted. A number of changes have been made, which are indicated in the scale as printed below:

Sheet Mill Scale.

It is agreed that at a 2-cent Western Iron Association's Card, the prices for rolling on a sheet and jobbing mill shall be as follows, with 2 per cent. additional for each one-tenth advance of said card, and 2 per cent. decline for each deduction of one-tenth from said card:

Gauges.	Price for rolling on a 2-cent card, per ton, 2,240 pounds.
No. 8 and heavier	$3.60
Nos. 9 to 11	4.00
Nos. 12 to 14	4.80
Nos. 15 to 17	5.60
Nos. 18 to 21	6.80
Nos. 22 to 24	8.00
Nos. 25 and 26	8.80
No. 27	9.60
No. 28	10.40
No. 29	11.20
No. 30	12.00

AMALGAMATED ASSOCIATION OF IRON AND STEEL WORKERS' WEIGHT OF GAUGES FOR IRON AND STEEL PLATES AND SHEETS.

No.		No.	
16	2.50	24	1.00
17	2.1875	25	0.90
18	1.875	26	0.80
19	1.71875	27	0.72
20	1.5625	28	0.64
21	1.40625	29	0.56
22	1.25	30	0.50
23	1.12		

1. When sheets are rolled lighter than the gauge they represent the mean between that and the next lighter gauge to be taken for the rolling price.

2. Ten per cent. added on all steel, by whatever name called, No. 23 and lighter.

3. All sheets, No. 18 and lighter, over 32 inches wide, 10 per cent. extra on above prices.

4. All sheet iron or sheet steel shall be weighed by the company after being sheared and opened.

5. Twenty per cent. added for changed iron and steel.

In paragraph 6 the words "except shearman" have been added, and paragraphs 6 and 7 in the new scale read as follows:

6. For pickle finish or pickled in the rough, either iron or steel, worked on sheet mills, 33⅓ per cent. extra shall be added for the same, except shearman.

7. All iron or steel rolled on sheet or jobbing mills, sheared to patterns of irregular shapes or circles, shall be paid for at the weight of the square sheet. This clause shall not apply to boiler and tank heads or any plates or sheets where the waste does not exceed 10 per cent. above square sheets; but where the waste does exceed 10 per cent. above square sheets the company agree to pay 20 per cent. extra above scale prices.

In the old scale paragraph 8 read as follows:

8. Sheet and jobbing mills working three turns, the shearing shall be divided between two shearmen, and no shearman be allowed to shear for more than two turns.

This has been changed very materially, and in the new scale reads as follows:

8. Sheet and jobbing mills working three turns, the shearing shall be divided between two shearmen on jaw or crocodile shears, and no shearman be allowed to shear for more than two turns on jaw or crocodile shears or three turns on squaring shears.

Paragraph 9 in the old scale read as follows: "9. The shearman receives one-fifth, the same to be paid by the roller." In the new scale it now reads as given below:

9. That shearman receive one-fifth on jaw or crocodile shears, the same to be paid by the roller. That on sheet mills using squaring shears the price for shearing shall be one-sixth.

Paragraphs 10, 11 and 12 are unchanged and read as follows:

10. That the rollers on sheet mills shall not be permitted to hold more than two turns.
11. Sheet mills working three turns that make tin and black plate shall be permitted to work three turns of eight hours each, or seven heats each turn.
12. Roll hands on sheet and jobbing mills shall be paid one day's work at laborer's wages for changing rolls.

In the old scale Paragraph 13 read as follows:

13. Heater to receive one-fourth of the above prices, and 3 cents per bundle extra, to be paid by the company, for all iron, No. 20 and lighter, annealed in an open furnace; Shearman, one-fifth; roller to receive balance and pay rougher and catcher.

This has been changed to the following:

13. Heater to receive one-fourth of the above prices, and 3 cents per bundle extra, to be paid by the company, for all iron, No. 20 and lighter, annealed in an open furnace; Shearman, one-fifth on jaw or crocodile shears; roller to receive balance and pay rougher and catcher. This clause not to apply to mills using improved shears as provided for in Clause 9.

Paragraphs 14, 15, 16, 17 and 18 have not been changed, and read as follows:

14. That plates be designated as ending at No. 8 gauge and fire bed commence at No. 9 gauge and end at No. 19 gauge, and sheets to commence at No. 20 gauge.
15. That all mills working plates and fire bed to No. 19 gauge shall be termed jobbing mills.
16. That all mills working sheet iron or steel when on fire bed shall work under the same rules and rates as jobbing mills.
17. That neither of the above 15th or 16th clauses shall interfere with Clause 12 of sheet mill hands scale.
18. That the roller pays extra for working the spanner on chill rolls where there are two sets of rolls.

In the sheet mill hands' scale no change has been made down to Paragraph 4, except in Paragraph 2, and this has been changed from "doubled in pairs, 84 pairs per turn" to "doubled in pairs, 96 pairs per turn," and the scale as adopted to Paragraph 4 reads as follows:

Sheet Mill Hands' Scale.

SINGLE MILL.

Pair heating, per day	$2.25
Matching, per day	2.00

LARGE DOUBLE MILL.

Pair heating, per day	$2.00
Doubling, per day	1.75
Matching, per day	1.85

SMALL DOUBLE MILL.

Pair heating, per day	$1.85
Matching, per day	1.60
Doubling, per day	1.50

1. For all iron trimmed and annealed in an open furnace 3 cents per bundle extra to be paid to the pair heater, matcher and doubler, each.
2. This scale of wages is based on 180 pairs, per turn, for single mills, and No. 25 gauge and upward, doubled in pairs 84 pairs per turn; doubled in threes 105 pairs per turn. Single iron, 14 to 19 gauge, inclusive, 105 pairs.
3. That the limited output per turn on three-turn mills be nine heats, and on two-turn mills ten heats.

In the old scale Paragraph 4 read as follows:

4. A furnace full of welding iron to constitute a heat; provided a furnace shall not hold more than 15 pairs.

This has been stricken out and the following inserted in its place:

4. Mills that do not double 20 to 24 gauge to work at the rate of single iron mills, 180 pairs.

Paragraphs 5 to 9 inclusive are unchanged and read as follows:

5. Doubling over iron on a single mill to be made at the same ratio as on doubling mills.
6. All finishers to be counted.
7. On all sheets 36 inches wide and over the company shall furnish the extra help necessary, not to exceed two men.
8. Roll hands on sheet and jobbing mills shall be paid one day's work at laborer's wages for changing rolls.
9. Sheet mills working iron or steel 120 inches long and over, the day hands shall be paid an average day's work for the same.

Paragraph 10 in the old scale read as follows. In the new scale nine heats are made a turn's work:

10. Mills working narrow widths and short lengths, below and including 28 inches wide and 84 inches long, shall be allowed to make nine heats for a turn's work, and for each turn of nine heats the day hands shall be paid in proportion. This clause shall only apply to mills that make a uniformly large amount of narrow width and short length sheets.

Paragraph 11 is unchanged, as follows:

11. On sheet and jobbing mills working two turns of eight heats each, and on mills working three turns of eight hours each, the day hands shall be paid a full turn's work in case of failure to make the eight heats in the time specified in memoranda of agreement on a two-turn mill, or a full turn on a three-turn mill.

Paragraphs 12 and 13 are new additions to the scale and read as follows:

12. All sheet and jobbing mills working sheets over 30 inches wide shall be classed as large double mills. Mills working 30 and under in width are classed as small mills, but mills classed as small mills that work over 30 in width and not exceed 34, the day hands to be paid large mill prices while employed on these widths, and when a part of a turn is ran over 30 and does not exceed 34, the whole turn is to be paid for at large mill prices. This is to apply to mills classed as small mills at present.
13. Mills working narrow widths and short lengths to make the equivalent to 15 pairs of sheets per heat, containing 15½ superficial square feet each sheet. This to be governed by Section 11 of Sheet Mill Hands' Scale, and Section 8, Article XVIII of the Constitution.

The scale of wages for tin and black plate mills has been rearranged considerably.

The new scale as adopted for tin and black plate mills is as follows:

Tin and Black Plate Mills.

It is agreed that at a 2-cent Western Iron Association Card the prices for rolling, shearing, doubling and heating on a tin and black plate mill shall be as follows, with 3 per cent. additional for each one-tenth advance of said card, and 3 per cent. decline for each deduction of one-tenth from said card:

Gauges	Rolling steel 2,240 lbs.	Doubling.	Heating.	Shearing on jaw or crocodile shears.
Nos. 8 to 11	$2.27	$1.03	$ .94	$ .76
Nos. 12 and 13.	2 37	1.07	1.00	.79
Nos. 14 and 15.	2.72	1.22	1.19	.91
Nos. 16 and 17	3.64	1.63	1.48	1.21
Nos 18 to 20	4.08	1.83	1.68	1.36
Nos. 21 to 24	4.51	2.05	1.79	1.49
Nos. 25 and 26.	4.86	2.20	2.00	1 61
Nos. 27 and 28.	4.96	2.36	2.19	1.65
Nos. 29 and 30.	5.89	3.00	2.76	1.95
No. 31	6.15	3.25	3.03	2.03
No. 32	6.56	3.52	3.18	2.18
No. 33	7.41	3.78	3.58	2.45
No. 34	8.06	4.04	3.85	2.67
No 35	8.84	4.21	4.12	2.92
No. 36	9.64	4.56	4.39	3.19
No. 37	10 52	4.83	4.68	3.49
No. 38	11.40	5.09	4.97	3.78

Fifteen per cent. less than the above prices for iron.

Shearman on modern squaring shears to receive $1 per turn. This clause only applies for shearing tin plate.

EXTRAS.

1. Twenty per cent. added for changed iron and steel.
2. Thirty-three and one-third per cent. added for pickle finished iron and steel, except shearman.
3. For all sheets sheared into circles on tin and black plate mills where the loss exceeds 10 per cent., 20 per cent. extra shall be paid.
4. That all sheets cut down to smaller sizes on tin and black plate mills be paid for at scale prices.

In connection with the above scale, it should be noted that it contains several items which have not as yet been agreed upon by the respective conference committees. In the sheet mill hands' scale the manufacturers insist on a paragraph being added as follows: "That if any mill in the Western District, in which Amalgamated Association men work, deviation be made from this scale whereby the labor cost of the product be reduced, the same deviation shall obtain in all other mills." This has not yet been agreed upon by the Amalgamated Association, and may cause trouble before it is finally settled. In addition to the above there are several other minor points to be arranged. In all probability, however, the entire scale will be amicably arranged at the next meeting of the conference committees.

Carnegie Steel Company, Limited.

On June 30, 1892, official announcement will be made at Pittsburgh to the effect that the Carnegie Steel Company, Limited, of that city would succeed to and carry on the business of the manufacture of iron and steel formerly conducted by Carnegie Brothers & Co., Limited; Carnegie, Phipps & Co., Limited; Allegheny Bessemer Steel Company and Keystone Bridge Company. The new organization will become effective on July 1, and will control and operate the following works: Edgar Thomson Furnaces and Edgar Thomson Steel Works, at Braddock, Pa., at which plants are turned out annually 850,000 net tons of Bessemer pig iron, spiegeleisen and ferromanganese, and 425,000 net tons of steel rails; Homestead Steel Works, Homestead, Pa., the product of which consists of blooms, billets, structural shapes, bridge steel and boiler, armor, ship and tank plate, the annual capacity being 180,000 net tons of Bessemer steel ingots and 200,000 net tons of open-hearth steel ingots; Duquesne Steel Works, Cochran Station, Pittsburgh, Virginia and Charleston Railroad, the product being rails and billets, which are rolled down from the ingots at initial heat, the annual capacity being 225,000 net tons of rails or billets; Keystone Bridge Works, Pittsburgh, Pa., whose product is finished bridge material of all kinds, the annual capacity being 18,000 net tons; Upper Union Mills, Thirty-third street, Pittsburgh, whose product is structural iron and steel and steel bars, iron and steel universal mill plates and light steel rails, the annual capacity being 85,000 net tons; Lower Union Mills, Twenty-ninth street, Pittsburgh, whose product is universal mill plates, car forgings, bridge work, angles, axles, pins, links and bar iron, with an annual capacity of 50,000 net tons; Lucy furnaces, Pittsburgh, with an annual capacity of 175,000 tons of Bessemer, forge and foundry pig iron; Beaver Falls Mills, Beaver Falls, Pa., with an annual capacity of 54,000 net tons of wire rods and 700,000 kegs of wire nails. This plant is also equipped for the manufacture of merchant steel bars to the extent of 30,000 net tons per annum, but this department has not been in operation for some time.

Included in the consolidation are also the concerns known as the Scotia Ore Mines, Larimer Coke Works at Larimer, Pa., and the Youghiogheny Coke Works, on the southwest branch of the Pennsylvania Railroad. The product of the Scotia Ore Mines and the two coke plants,

as noted above, is all consumed in the different plants of the Carnegie Steel Company, Limited. The general offices will remain at Pittsburgh as heretofore. When the amount of product, capital invested and number of hands employed is considered, the Carnegie Steel Company, Limited, undoubtedly represent the largest iron and steel manufacturing concern in the world. Although no official figures have been given out as to the number of men employed, it is safe to say that between 25,000 and 30,000 men are employed in the various plants of this firm. In addition to the general offices located at Pittsburgh, sales offices for the sale of the various products of the firm are located in the following cities: Boston, New York, Philadelphia, Buffalo, Cleveland, Detroit, Chicago, Minneapolis, Cincinnati, Atlanta, St. Louis, Denver and San Francisco. The following are the officers of the Carnegie Steel Company, Limited: H. C. Frick, chairman; John G. A. Leishman, vice-chairman; F. T. F. Lovejoy, secretary; H. M. Curry, treasurer.

LABOR AT PITTSBURGH.

With the exception of the adoption of the sheet scale governing wages in sheet mills for the year 1892 93, which is printed elsewhere in this issue, the labor situation at Pittsburgh does not show much change from that noted in our issue of last week. Some conferences have been held between the Conference Committee of the Amalgamated Association and the Pittsburgh iron manufacturers, and also the Carnegie Steel Company, Limited; but at this writing the indications are that a settlement of the wage scale is further off now than ever before. The adoption of a scale by the Iron and Steel Sheet Manufacturers' Association led many to believe that it would open the way for a settlement between the Amalgamated Association and the iron manufacturers. Such, however, has not proven to be the case.

On Friday at 3 p.m. the Conference Committee of the Amalgamated Association and the iron manufacturers of Pittsburgh held a meeting in the Ferguson building in that city which was in session for about five hours. Practically the same ground was gone over at this conference as at the previous conferences held the week before. Both sides re affirmed the positions taken at previous conferances, and neither side seemed inclined to make any concessions whatever. The committee appointed to represent the Amalgamated Association was given limited powers and insisted on the adoption of the scale as originally presented by that organization. On the manufacturers' side the position taken at previous meetings was reaffirmed and the assertion made that it would be utterly impossible for the manufacturers to sign the Amalgamated scale. A long discussion was had, and the different points in the scale were gone over carefully, but at the conclusion of the meeting there were no indications of a settlement being reached. The manufacturers insist on the adoption of the scale as presented by them, which calls for boiling at $4.50 on a 2-cent. card and proportionate reductions in other departments. As the present scale expires on Thursday, the 30th, it does not seem probable that a settlement will be reached this week, and the indications for a strike are strong. The Amalgamated Association officials are no doubt surprised at the firm stand taken by the Pittsburgh manufacturers. When the manufacturers' scale was first presented to the Amalgamated Association the officials of that body looked upon it as a large-sized bluff, and did not seem to feel that its enforcement would be demanded. However, events so far show that the position taken by the manufacturers is a determined one, and that unless concessions are made by the Amalgamated Association a strike is sure to come. After the conference on Friday, the 24th inst., had adjourned, no time was set for another conference, but one will probably be held during the present week. The Tyler Tube & Pipe Company of Washington, Pa., signed the Amalgamated scale last week. As is always the case when a concern signs the scale while it is in dispute, they were given to understand that they will be allowed to participate in any concessions that are made by the Amalgamated Association after they had signed the scale. The Tyler Tube & Pipe Company are manufacturers of skelp iron for boiler tubes, their works being located at Washington, Pa. Their plant contains eight forge fires, one run-out fire, four heating furnaces, two trains of rolls, 16 and 18 inch in size, and two hammers. This firm will also use the product of the Principio Forge Company, located at Principio, Md.

On Friday morning, the 24th inst., a conference was held between a Conference Committee appointed by the Amalgamated Association and the officials of the Carnegie Steel Company, Limited. The firm was represented by H. C. Frick, chairman; Otis H. Childs, F. T. F. Lovejoy and John A. Potter, superintendent of the Homestead Steel Works. The Amalgamated Association was represented by about 25 delegates who are employed at the Homestead Steel Works. The session was quite a long one, but no progress whatever was made looking to the adoption of a scale to govern wages in the Homestead Steel Works. As we have already announced in these columns, the minimum price in the present scale is $25 on 4 x 4 inch billets. In the new scale the minimum price was fixed by the firm at $22 per ton. This was strongly objected to by the employees, and at the above conference the firm decided to advance the minimum price from $22 to $23, while the employees would only agree to accept a reduction of $1 per ton on the minimum price, which reduced it from $25 to $24 per ton. This is a clear difference of $1 per ton between the firm and the men, and as neither side would recede from its respective prices nothing was accomplished.

Another point in connection with the arrangement of the scale which is giving considerable trouble is regarding the time at which the scale shall expire. The firm insist that the scale continue in force for 18 months from July 1, 1892, which would make it expire on December 31, 1893. The reason advanced by the firm for wanting to have the scale expire at this time of the year is the fact that improvements and repairs at the Homestead Steel Works are always made during the last week of the old year and the first week of the new. At this period the works are generally closed down for about two weeks, and the scale expiring at this period would be of considerable advantage to the firm. On the other hand, the employees objected strenously to have the scale expire on the last day of the year, and insisted that it should be arranged to expire when other scales do, which is on June 30 of each year. They agree to have a scale run for one, two, three or five years, but insist that it must expire on June 30. The firm emphatically declined to grant this point, and there the matter ended. The conference adjourned without any request from the Amalgamated Association for another meeting, and at this writing no arrangements have been made looking to another conference. The indications are that a strike will occur at Homestead, although it is hard to tell what two or three days may bring forth. In anticipation of trouble at the Homestead Steel Works, the Carnegie Steel Company, Limited, are said to have canceled a number of orders and declined in many instances to take orders for delivery during July and August, for fear they would have trouble in filling them. Preparations have been made for a strike, and the firm have endeavored in every way to fortify their position in case a shut down occurs. As the scale now in force expires on Thursday, the 30th inst., if a strike is to be averted prompt action must be taken during the first half of this week. It is certain the firm will not ask for another conference with the Amalgamated Association, and just what the next step will be it is impossible to state As we note above, however, indications point to a strike at the Homestead Steel Works, to commence on July 1.

On Friday, the 24th inst., the Conference Committee of the Amalgamated Association met the wire rod manufacturers in the Ferguson Building, Pittsburgh, and the scale of wages governing wire rod mills for 1892–93 was carefully gone over. It is understood that there are some portions of the scale which are not acceptable to the manufacturers, they claiming that there are some discrepancies existing which should be corrected. As the points at issue are of minor importance it is possible that the wire rod scale will be arranged to the satisfaction of both manufacturers and workmen during this week. It is probable another meeting will be held before the present scale expires on the 30th inst.

On Saturday the Conference Committee of the Amalgamated Association sent to the different iron manufacturers both in Pittsburgh and the Mahoning and Shenango valleys districts the scale of wages prepared by the Amalgamated Association to govern wages in rolling mills during the year 1892-93. This scale has already been printed in *The Iron Age*, and is virtually the same as the scale which expires on June 30. As the Amalgamated Association will have adjourned before replies are received from the manufacturers as to their intentions regarding the signing of the scale, the Conference Committee has been delegated with a certain amount of power to treat with the manufacturers in regard to the wage scale. A meeting of the Conference Committee of the manufacturers and the Amalgamated Association will undoubtedly be held during this week.

At the conclusion of the last meeting between the Conference Committee of the Amalgamated Association and the manufacturers of the Mahoning and Shenango Valley districts, a request was made by the manufacturers to the effect that, as soon as the Amalgamated Association had concluded their sessions at Pittsburgh, they should send their Conference Committee to Youngstown, to confer with the manufacturers of the two valleys. This request was assented to, and as the Amalgamated Association will have concluded its labors and adjourned on Wednesday, the 29th inst., the meeting asked for will be held in Youngstown on Thursday, the 30th inst. At this time it is not known whether the valley manufacturers will offer any other scale than that presented in Pittsburgh early this month and printed in *The Iron Age* of June 9, or not. As the valley and other Western manufacturers are treating with the Amalgamated Association entirely independent of Pittsburgh, it would not be surprising if a compromise scale is agreed upon at the above conference. That such will be the case is not known absolutely, but it is reported on good authority that the valley manufacturers, in order to effect a peaceful settlement, will offer some concessions if the Amalgamated Association will do the same. The outcome of this conference will be awaited with considerable interest.

The present agitation in labor circles at Pittsburgh is responsible for a large num-

ber of statements being printed in the daily press of that city in matters connected with the impending strike which are wholly devoid of the truth. One of these lately printed was in reference to the Oliver & Roberts Wire Company of that city. The statement was made that this firm last year received concessions from the Amalgamated Association in the way of a special scale in which rates of wages were 15 per cent. lower than called for by the regular Amalgamated scale. This statement has been denied by the firm in question in a letter addressed to the Pittsburgh *Commercial Gazette*, which reads as follows:

Editor Commercial Gazette:

In your local of this date you say that the Amalgamated Association last year "made terms with the Oliver & Roberts Wire Company conceding that company a reduction of 15 per cent. on scale rates," and that "the concession was made in violation of the constitution of the association," &c. The above statements are entirely untrue in all respects. The Oliver & Roberts Wire Company's arrangements and terms last year with the Amalgamated Association were precisely the same as those made with other companies and firms engaged in similar lines of manufacture, and as far as we know there was no concession and no "violation of the constitution."

It is very desirable, in the present state of the controversy between the manufacturers and workmen, that nothing but what is strictly the truth should appear in the public prints, and it is with this end in view that we ask you to publish this correction.

OLIVER & ROBERTS WIRE COMPANY.

Other misleading statements regarding other firms have been printed, which the firms in question have allowed to pass without going to the trouble of correcting them.

The scale, as signed by the Oliver Iron & Steel Company, applies only to the Clapp-Griffith department, and is as follows:

PITTSBURGH, PA., June 27, 1892.

The following agreement between the Oliver Iron & Steel Company of the first part and McGann Lodge No. 93 Amalgamated Association of Iron and Steel Workers of the second part, beginning July 1, 1892, and ending June 30, 1893. The following scale of wages:

Converting Department.

Position	Number employed.	Per 100 heats.
Cupolaman	1	$9.45
Cupolaman's helper	1	5.50
Troughmen, each	2	5.50
Vesselman	1	7.75
Vesselman's first helper	1	5.50
Vesselman's second helper	1	4.75
Ladleman and pourer	1	7 75
Ladleman's first helper	1	5.50
Ladleman's second helper	1	4 99
Tapper	1	5.50
Tapper's helper	1	4.50
Manganeseman	1	4.50
Capper	1	4.50
Pulpit boys, each	3	2.90
Pit foreman	1	6.00
Pit foreman's helper, each	3	5.50
Engineer blowing engine, per day, 12 hours	1	2.25
Engineer pit locomotive, per day, 12 hours	1	2.10
Stocker	1	1.50
Stocker's helper, each	4	4.50
Coke wheeler	1	4.50
Scrap wheeler, 12 hours per day.	1	3.50
Bottom maker, 12 hours per day.	1	2.35
Bottom maker's helper, 12 hours per day	1	1.90
Cindermen, each	3	3.50

Blooming Mill Department.

Position.	Number employed.	Per heat.
Heater	1	$0.10
Heater's helpers, each	5	.06
Roller's helpers, each	2	.07
Leverman	1	.09
Shearman's helpers, each	2	.05 1/8
Shear tongsmen	1	.05 3/4
Crane boy	1	.02 9-10

Billet Mill.

		Per 100 billets.
Rougher	1	$1.25
Catcher	1	1.10
Hook-up	1	.86
Buggyman	1	.86
Drag-outs, each	2	.86

Billets to weigh 200 pounds or over.

NOTE.

1. That no billets smaller than 4 x 3 be made on the blooming mill.

2. It is further agreed that in case of a mechanical breakdown in either department, causing a stoppage of the work, the men shall remain under orders for 30 minutes. At the expiration of 30 minutes the manager shall decide whether he will hold the men longer or not, and for all time afterward that he holds the men they shall be paid at the rate of 4⅝ heats per hour until work is resumed, after which the men shall be paid for what they make; in subsequent breakdowns on the same turn the rate shall be that if the men are held longer than half an hour and work is resumed the men shall be paid for the half hour at the rate of 4⅝ heats per hour; if work is not resumed at the end of the half hour no allowance shall be made for it.

3. That an extra tongsman be furnished by the firm when the new soaking pit is working.

4. That when blooming mill is off and converting mill is on and ingots being stocked, the men shall be furnished by the firm to stock steel back from the pusher.

5. That the vessel helpers be paid at the rate of 35 heats on patching days.

Note.—Roller and shearman on above scale are void, roller on day turn to have charge of both turns He is to look after and keep up the mills, for which he is to receive 12 cents per heat on all steel made in the day time and 1 cent per heat on all steel rolled in the night turn. The night roller is to receive 10 cents per hour on all steel rolled on his turn.

(Signed) OLIVER IRON & STEEL COMPANY,
By D. B. OLIVER.

JAMES MCMULLEN,
JOHN HONN,
GRIFFITH DAVIS, } Committee.

The only change is an advance for some of the ladle men.

(*By Telegraph.*)

JUNE 29, 1892.

Another meeting between conference committees of the Amalgamated Association and the Association of Iron and Steel Sheet Manufacturers was held in the Times Building, Pittsburgh, last night. The meeting was in session from 7.30 p.m. until 5 a.m. There are three points of difference still existing between the Amalgamated Association and the manufacturers, but these will doubtless be arranged at a conference to be held here to-day or to-morrow. No trouble is anticipated between sheet mills and the Amalgamated Association, for iron mills scale has been signed by National Rolling Mills of the National Tube Works Company, McKeesport, Pa. No change has occured at Homestead Steel Works, and a strike is certain. The entire plant will be closed down on the night of June 30, and extensive repairs will be made which will take about 15 days to complete.

The Mining Engineers.

(*By Telegraph.*)

The mining engineers opened their convention at Bluff Point, Clinton County, N. Y., Tuesday evening under most auspicious circumstances. The attendance is larger than at any of their former meetings, amounting to over 200, including about 50 ladies. The members and friends are delighted with the superb location and accommodations of the Hotel Champlain, at which the meetings will be held. The opening address was made by John Birkinbine, the president, his subject being the influence of location upon the pig-iron industry. At this late hour it is impossible to do more than note the salient points of this exceedingly interesting address, which dealt first with the reasons for locating in the early stages of the industry, second reasons for changing in later years, and the presentation of tables showing that during the past five years the production of Bessemer pig has not quite maintained the proportions that it did previous to 1888. The address of welcome was made by F. S. Witherbee of Port Henry, and was in a most happy vein, being full of interest in regard to the iron-ore industry and bristling with historic facts.

A very interesting programme has been prepared for the next three days, including trips to Port Henry, Crown Point and other places of interest.

OBITUARY.

JAMES O. RICHARDSON.

James O. Richardson, who died at his home in Philadelphia, was one of the best-known iron commission men and agents in Philadelphia, having been in the business upward of 40 years. He was a New Englander by birth, and was 66 years old. From Worcester, Mass., he went to New York, entering the hardware business afterward at Danville, Pa. Subsequently he became manager for Atkins Brothers' Pioneer Furnaces at Pottsville, and later agent for the Monocacy Iron Company. Among the companies represented by Mr. Richardson at his death were Heckscher & Sons' Swede Furnaces at Swedeland, Pa., and the Rockhill Iron and Coal Company, whose furnaces are at Orbisonia.

D. DEANE WAITE.

D. Deane Waite, secretary of the Hitchcock Lamp Company, died at Watertown, N. Y., June 19, aged 50 years and 2 months. He was born in Champion. In 1868 he engaged in business at Carthage. He came to Watertown in 1873 and was employed by the Agricultural Insurance Company. Later he engaged in the crockery business under the firm name of Waite, Allen & Co. He was also employed several years by the Sun Fire Company. He was engaged by the Hitchcock Lamp Company later, and in 1887 became a stockholder and director of the Gifford Mfg. Company. He had been secretary of the Hitchcock Lamp Company for two years. He leaves a wife and three daughters.

M. G. RUBEL.

M. G. Rubel, vice president of the American Cutlery Company, Chicago, died on the morning of the 23d inst. The deceased had been for 20 years actively associated with the table cutlery interests of the country, and leaves a large circle of mourning relatives and friends.

P. Seif, Jr., superintendent of the Lower Union Mills of Carnegie, Phipps & Co., Limited, at Pittsburgh, has resigned his position, to take effect on July 1 next.

M. R. Hunt terminates his four years' engagement as manager of the Ashland Iron & Steel Company, at Ashland, Wis., on July 1. His successor had not been appointed at last advices. Mr. Hunt has won enviable distinction in the charcoal pig-iron trade by his eminent success in conducting the operations of the Hinkle Furnace. Under his management an output was attained that far surpassed all expectations.

A press dispatch from Baltimore, Md., June 23, states that the tin-plate works of Coates & Co. were destroyed by fire Thursday morning.

The Allentown Rolling Mills have reduced puddlers' wages from $3.80 to $3.30 per ton, and the pay of other employees proportionately.

At the annual meeting of the stockholders of the Bethlehem Iron Company, Joseph Wharton and Beauveau Borie of Philadelphia and Robert H. Sayre, E. P. Wilbur, Robert P. Linderman, George H. Myers and John Fritz were elected a Board of Directors.

The Cleveland Stamping and Tool Company, Cleveland, Ohio, have about completed their new buildings and will be running in a few days.

MANUFACTURING.

Iron and Steel.

Jas. F. Larkins, for a number of years with the A. French Spring Company of Pittsburgh, has severed his connection with that firm and has accepted the position of superintendent of the works of the American Spiral Spring Company of Pittsburgh, manufacturers of all kinds of spiral springs. The works of the last-named concern are located at the corner of Shingiss and Bluff streets, Pittsburgh, and are being operated full time and turning out a large product. Their business was established in Pittsburgh a few years ago, and has increased very rapidly and is still growing.

Furnace F of Carnegie Brothers & Co., Limited, at Braddock, Pa., is now out of blast undergoing repairs. Ten feet is being added to the hight of this furnace, to correspond with furnaces H and I. Furnace F has also been relined, and it will probably go in blast early in July.

The regular annual meeting of the stockholders of the Stirling Steel Company of Pittsburgh, with works at Demmler, Pa., will be held at the general office of the company, Westinghouse Building, Pittsburgh, Pa., on Tuesday, July 12 next.

F. R. Phillips of Philadelphia is, this week, shipping one of the five-roll Morewood sets for bright tin to Wallace Banfield & Co., Limited, Irondale, Ohio.

J. H. Sternbergh & Son, Reading, Pa., report business as brisk in the line of bolts and nuts, rivets, &c. Their works have been running to full capacity for some time to keep abreast of orders, with every indication of a satisfactory continuation. They are now engaged upon perfecting some new lines of manufacture

The Lebanon Iron Company, Lebanon, Pa., are about to put in a new 8-inch rolling mill. Their works are running full; orders coming in plentifully the last few weeks, and condition of business stated to be very satisfactory considering the prevailing depression.

The Lickdale Iron & Steel Company, Lickdale, Pa., are now turning out 125 tons of steel billets and plates daily. They report a ready market for their goods among Pennsylvania manufacturers. The company expect to increase their facilities by the addition of new rolls and billet train shortly, the condition of their business lately having been encouraging. The Lickdale Iron & Steel Company have been reorganized lately in consequence of the decease of Mr. Lick, their late president. The present officers are Samuel Weiss, president, C. Penrose Sherk, managing director, Samuel Grob, superintendent, and James L. Rutter, secretary and treasurer. The company's office is at Lebanon, Pa.

The new universal mill which has been erected by the Pennsylvania Steel Company for the Central Iron Works, Harrisburg, Pa., is now completed as far as the structure is concerned. The rolling machinery and necessary equipment are now being placed and the mill will probably be put in operation about the middle of July.

Hon. Frank Lyman of Brooklyn, N. Y., who recently purchased the Covington Furnace at Covington, Va., is preparing to have it remodeled with a view of putting it in operation in connection with the Dolly-Ann, Iron Mountain and Stack mines, all of which he owns.

The Jenifer Iron Company, Jenifer, Ala., are building a new furnace. The stack is completed and they are now erecting two stoves furnished by Riter & Conley of Pittsburgh, Pa. They are also erecting a new washer at the furnace. The officers are: John W. Noble, president; W. D. Fields, secretary and treasurer, and A. E. Noble, superintendent.

The American Pipe Works at Anniston, Ala., recently sent out the heaviest shipment of pipe that was ever made from a Southern city. It was consigned to Lancaster, N. H., and consisted of a train of 20 cars.

At the recent annual meeting of the Anniston Rolling Mills, Anniston, Ala., Robert Frayer was elected president, and W. E. Robertson secretary and treasurer.

Last Wednesday the Griswold Wire Works of Troy, N. Y., started up after having been closed some time for repairs. The new turbine water wheel works very satisfactorily.

The West Superior Iron and Steel Company, West Superior, Wis., have decided to use the Ridgway steam-hydraulic system, and W. F. Mattes, the general manager, during his recent vacation East placed an order for Ridgway cranes for their new hammered ingot department.

The Yale Steel Company, recently incorporated, are now remodeling the old plant of the New Haven Nut Company, at Westville, Conn., preparatory to commencing the manufacture of polished steel drill rods, needle wire, &c. Latest improved special machinery and power equipment is now being put in. The new concern expect to be ready for business by August 1. The officers of the company are Samuel Hodkinson, president, and Charles C. Long, secretary and treasurer. William Kidd, formerly of Kidd Steel Wire Company, Sharpsburg, Pa., is to be superintendent.

F. R. Phillips of Philadelphia has been awarded the contract by the N. & G. Taylor Company of Philadelphia for the whole of the "old style" tinning sides as well as the entire outfit of five-roll Morewood tinning sets for their new plant in Philadelphia.

The Le Clair Steel Company, Belleville, Ill., have been incorporated, with a capital stock of $50,000, to manufacture nails, merchant iron and other manufactures. The incorporators are Jas. C. Waugh, C. W. Stanley and W. M. Switzer.

It is reported that a company composed of Bellaire, Wheeling and Pittsburgh capitalists have purchased the plant of the Ætna Glass and Mfg. Company, at Bellaire, Ohio, which they will remodel for the manufacture of stamped ware. It is proposed to turn out tin and granite ware and tubular lanterns. The capital stock of the new concern is reported to be $150,000, with privilege of increasing to $250,000.

The Pennsylvania Steel Company, at Steelton, Pa., are building a slabbing mill capable of taking 36 x 52 inch ingots. They will also build four additional open-hearth furnaces.

Stanhope Furnace has been blown out.

The Fulton Iron Works, recently destroyed by fire, will not be rebuilt at San Francisco, but will seek some other location on the coast, probably Oakland.

The plant of the Crescent Horseshoe Works, at Max Meadows, Va., for the manufacture of horseshoes and bar iron, is nearing completion.

Work has begun on the foundations for the Malleable Iron Works, at West Troy, N. Y.

Machinery.

At a meeting of the Board of Directors of the Westinghouse Air Brake Company, held in Pittsburgh last week, the regular quarterly dividend of 5 per cent. was declared, also an extra dividend of 5 per cent., payable on July 9, to stockholders of record on July 1. For the first six months of this year the Westinghouse Air-Brake Company have declared dividends amounting to 25 per cent. Two more regular dividends of 5 per cent. each will probably be declared this year, which will make 35 per cent. in dividends paid for the year 1892. It is also probable that one or two extra dividends will be declared during the coming six months.

In the United States Circuit Court at Pittsburgh last week there was on trial the case of the Consolidated Ice Machine Company of Illinois against the Union Ice Mfg. Company of Pittsburgh. The suit is to recover $72,000, claimed to be due on machines for the manufacture of artificial ice sold to the defendant company.

A machine shop will be erected at Kilgore, Texas, by E. C. Scott.

The Vulcan Iron Company of New Castle, Pa., have just completed the erection of a new foundry and machine shop. The former is a brick structure 60 x 160 feet, with structural steel roof, and is fitted with two 15-ton cranes, two Colliau patent cupolas, with steam elevator for carrying up the metal, and latest improved core oven. The machine shop is 120 x 60 feet, and equipped with the latest modern machinery. The company have been established six years. They make a specialty of rolling mill stock.

R. H. Hammond & Co. have succeeded to the business hitherto known as Grove & Hammond of the Union Boiler Works, Lebanon, Pa., engineers and constructors of boiler, gas works, blast furnace and steel plant work.

The Weimer Machine Works Company, Lebanon, Pa., have just shipped a large blowing engine to the Sloss Iron and Steel Company of Birmingham, Ala. The engine weighs 185 tons, with 96-inch air cylinder, 54-inch steam cylinder and 84-inch stroke. The company are busy on the manufacture of their patent Weimer tilting cinder car for handling blast furnace cinders or other molten materials. Four of these, each having a capacity of 160 cubic feet, the largest yet built, have recently been made for the Illinois Steel Company of Chicago, and 12 more of the same size are to follow. One of these cinder cars has also been shipped within the last few days to the New Glasgow Coal, Iron and Railroad Company, New Glasgow, Nova Scotia. The Weimer Machine Company are contemplating embarking in the manufacture of large sized engines, of 100 horse-power of the Corliss cross compound and tandem types, which will necessitate some extension of plant. A number of new machines of their own make, adapted for special purposes in connection with their lines of manufacture, have recently been added, notably a heavy boring mill, with four borers and a capacity of 16 feet under the head. The mill has a 20-ton crane.

Harrisburg Foundry & Machine Company, Harrisburg, Pa., continue their condition of activity, with works running full on double turn. They have several important contracts on hand for Ideal engines and road rollers. The company have received, during the last few weeks, a number of letters testifying in the highest terms to the efficiency of the double engine road rollers made by them for various parties at Chicago, Augusta, Ga.; Hartford, Conn.; Sedalia, Mo.; Cincinnati, and Troy, N. Y.

The Adams Iron Works, which recently burned out at Dubuque, Iowa, will rebuild their foundry at once. The wholesale hardware firm of Schreiber, Conchar & Westphal Company, who also manufacture a line of hardware specialties, will jointly occupy the new building. It will have a length of 200 feet by a depth of 100 feet and will have a switch track at the rear, connecting with all roads coming into Dubuque.

The Tupelo Foundry & Machine Company of Tupelo, Miss., will enlarge their plant.

The new railroad shops to be erected at Meridian, Miss., by the Queen and Crescent, will cost $30,000 and be one-third larger than the old shops which were burned. The contract calls for completion by October 1. W. S. Davis of Birmingham, Ala., is the contractor.

The firm of Brettell & Wilson, manufacturers of planers and special machinery, at Rochester, N. Y., have been succeeded by William A. Wilson, he having purchased Mr. Brettell's interest. Mr. Wilson announces that he has built new patterns for his planers and has improved them. He is now in position to fill orders promptly both for his improved planers and for the machinery for which he is agent.

The Royersford Machine Company of Royersford, Pa., report satisfactory progress in their extensive line of manufacture. The company were formed nearly two years ago, with a paid-up capital of $40,000, S. H. Egolf being president, J. J. Nix vice-president, A. Loomis secretary, S. B. Latshaw treasurer, with Y. C. Freed as general manager. They have met with a very satisfactory amount of success, and are now increasing their lines of goods very materially, for which purpose ground has been purchased for the erection of additional buildings, including a brass foundry. They are at present in occupation of a handsome five-story building, 120 x 80 feet, adjoining the tracks of the Philadelphia & Reading Railroad, well provided with machinery and all necessary equipments. The Royersford Machine Company have lately commenced the manufacture of iron and steel shafting, hangers, couplings, &c., as well as engines, mill supplies, glass molds, pumps and elevators, which are their staple productions, for which a ready market has been found, particularly in the immediate district. The company are sole agents in the United States for the Rennyson & Nix's fuel-gas generator, for which they have some substantial contracts on hand.

The Campbell & Zell Company of Baltimore have been awarded the contract for one 250 horse-power Zell improved water-tube safety boiler by Messrs. Badenoch Bros., Chicago, Ill.

Lincoln & Co., Hartford, Conn., have recently begun the manufacture of a line of improved bleaching, dyeing and finishing machinery heretofore made in England. The new department is in charge of E. A. Rusden, formerly connected with Mather & Platt, Manchester, England. A number of important mills have been fitted out with these machines, and Lincoln & Co.'s works are running full time.

N. P. Hyndman of Pittsburgh, agent for the Hazard Mfg. Company, Wilkesbarre, Pa., has on exhibition in his office in that city a piece of steel-wire cable, taken from No. 9 cable, Chicago City Railway Company, placed in service April 26, 1891, and removed on May 15, 1892. Its record is as follows: Days of service, 385; miles per day, 285, or 14¼ miles per hour; total mileage, 109,725 miles; best mileage ever made by the Chicago city railway system; diameter was 1 5-16 inches; weight per foot, 2.86 pounds. This mileage service is remarkable, when considering that a fair average of street cable service is 60,000 miles and considering also the immense traffic of the Chicago City Railway Company's system.

The announcement has been made by Homer Ramsdell of Newburg, N. Y., that his machine shop, &c., formerly occupied by William Wright, was for sale or rent. This has given an impression to a great many that the Wright Steam Engine Works have gone out of business. The facts are that he vacated Mr.

Ramsdell's shops on May 1 to occupy new and extensive works of his own, which he has been building for the last two years. The new works are located upon the Hudson River at the north end of Newburg and are not only larger than Mr. Ramsdell's shops, but are fitted up with all modern and special tools, electric and steam cranes, &c. Mr. Wright is now in a position to do much more work of the heaviest description than he could do in the old shops. He is full of orders, among them being a 400 horse-power for San Juan Smelting Company of Durango, Col.; a 1500 horse-power for Amoskeag Mfg. Company, Manchester, N. H.; a 600 horse-power for the Everett Mills of Lawrence, Mass.; a 1000 horse-power for the Coney Island & Brooklyn Electric Railroad Company of Brooklyn, N. Y.; a 300 horse-power for the Geo. W. Wheelwright Paper Company of Boston, and a 1000 horse-power for the New York and Brooklyn Bridge, Brooklyn, N. Y., and others.

The Rodney Hunt Company are building an addition to their machine shop at Orange, Mass. The addition will be 75 x 40 feet, two stories high.

The Atwood Machine Company of Stonington, Conn., have received an order from Moscow, Russia, for silk machinery.

The Morris Machine Works have been incorporated, with a capital stock of $300,000, to carry on business at Baldwinsville, N. Y.

The Burr & Bailey Company have been incorporated, with a capital stock of $60,000, to conduct a machine shop at Wilmington, Del.

Morse, Williams & Co. of Philadelphia have recently placed a hydraulic passenger elevator in the Masonic Temple, Richmond, Va. They also have contract to place a hydraulic passenger elevator in the Masonic Temple now being erected in Camden, N. J.

Hardware.

Scranton Axle Works have been organized at Scranton, Pa., with a capital stock of $150,000. The officers of the company are: J. M. Kemmerer, president; Thomas J. Moore, secretary, and E. H. Ripple, treasurer. A building is now in course of erection, and with the machinery, which is nearly all purchased, will cost about $60,000. The company hope by November next to turn out from 300 to 400 sets of axles daily. They are the owners of 11 new patents relating to the manufacture of axles.

Udell Wooden Ware Works, North Indianapolis, Ind., have recently made an addition to their power plant by adding three boilers and a fine Corliss engine. They have also put in a new electric-light plant and erected a wing to their factory, 92 x 72 feet, three stories high, and are intending to build another structure 270 x 70 feet, three stories high.

S. B. Howe, manufacturer of handles, at Logansport, Ind., has been so crowded with orders recently that he finds himself unable to make prompt shipments. Hard wood is becoming so scarce in that section of the country that he is contemplating the removal of his handle factory to the South.

Cincinnati Mfg. Company, Cincinnati, Ohio, advise us that they have recently put in new and improved machinery at their Hammond street factory for the manufacture of brass and art metal work of every description used in bank railing, elevator inclosures, grille work, &c., and are now in a position to manufacture this work to the best advantage.

The Lackawanna Hardware Company, with a capital stock of $30,000, have been incorporated at Scranton, Pa., for the manufacture and sale of hardware. The incorporators are Chas. McMullins, N. C. Cawles and John Ferber.

Miscellaneous.

Patch & Swift, Streator, Ill., advise us that they are doing a fairly satisfactory business in both stove repairs and architectural iron work, and that they have been making some work for the World's Fair buildings at Chicago and for other buildings throughout the State. They have added a pattern shop and a new office to their works this year.

The Waterbury Brass Company of Waterbury, Conn., are putting up their new wire mill, which will be of iron designed and furnished by the Berlin Iron Bridge Company of East Berlin, Conn. The rolling mill will be 100 feet wide and 160 feet long, with a wing (to be used for drawing wire) 40 feet wide by 280 feet long.

The Sunset Metal Cross Tie Company have filed articles of incorporation at Los Angeles, Cal., the purpose of the company being the manufacture of Sweet's steel cross ties and fastenings and other railroad appliances. The capital stock is $1,000,000, of which $950,000 are said to have been paid in.

The factory of the Ontario Wire Fencing Company, at Picton, Ont., has been totally destroyed by fire. The loss is $10,000.

TRADE REPORT.

Interest, of course, centers in the labor situation in the West, to which we devote a good deal of space elsewhere. A sharp distinction should be made between the Steel and the Iron mills, although in many cases both are made by the same concerns. First of all, the Rail mills are not involved, nor are quite a number of Steel works which are non union. The keenest struggle will be made at the Carnegie Homestead mill, or "Fort Frick," as it is now called in Pittsburgh. Thus far the men have been outgeneraled, the machinists, mechanics and engineers having made their own terms. The Steel mills running under the Amalgamated scale are Jones & Laughlin, and Oliver (who has signed) in Pittsburgh, the Bellaire and Mingo in the Wheeling district and Belleville in Illinois. We are advised that no signatures are expected at Wheeling for a week or two. The Open Hearth works running under Amalgamated scale are Linden, Jennings Brothers, Apollo and Kirkpatrick. The Iron mills working under the Amalgamated are much more numerous, and among them the only important one which has signed thus far is the National Tube Works. The Wire-Rod and Sheet mills have practically signed. The men have abandoned the effort to have two weeks' holiday in July, thus putting some pressure on the recalcitrant manufacturers. It should be understood, also, that those who sign the new scale receive the benefit of any concessions subsequently made. Looking over the whole field, there seems little prospect that the capacity East and West which will not be affected will not be fully able to cope with the current demand. The Lehigh mills in eastern Pennsylvania have announced a lowering of wages.

Probably the most interesting matter in connection with the markets of the country, taken as a whole, is the fact that the large Western Agricultural Implement makers are arranging for a 12 months' supply of Raw Materials. They have been trying to buy Foundry Iron for a year's delivery at present prices, but have found some Southern makers unwilling to commit themselves beyond this year. They are figuring in Chicago on about 20,000 tons of Bars, and one of them has already bought there last week 7000 tons of Merchant Steel.

The lowering of vessel rates on Ore to Cleveland is interesting principally because some of the large Ore contracts by buyers this year were made on the basis of a guarantee of rates by the Steel works. It may be of interest to note also in this connection a somewhat unusual series of transactions made a few weeks since, but not yet alluded to in print. A very large concern in Pittsburgh bought 50,000 tons of Bessemer Pig from four makers, two of them in Pittsburgh and one of them in the Mahoning Valley, paying for the Iron in Lake Superior Ore.

In Pig Iron there has been quite an active move in the Eastern primary markets, Chicago noting a number of renewals of contracts for local Coke at low prices. In the East it is practically decided that a cut of $1 per ton will be made. Pittsburgh records some sales of Bessemer at a shade under $14.

Billets, Rods and Rails are dull in all markets, and the only transactions in Old Materials which have come to the surface are 2000 tons of Old Rails at $18.25, Chicago, under special circumstances, allowing of a slightly higher price than the market.

Copper is not holding its own. Tin is speculatively active, while Lead is arousing more interest.

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 80 Dearborn street, CHICAGO, June 29, 1892.

The continued excessive rainfall of the past week has caused considerable interruption to transportation and to some extent interferes with building operations and other outdoor work affecting some branches of the Iron trade. The interruption is, of course, but temporary, and may result hereafter in increased orders for material of different kinds, but just at present it is very annoying to those who are anxious to have their business continue in good condition.

Pig Iron.—The general situation is certainly no worse than it was, but on the contrary presents features of encouragement. Local Coke Iron has been quite active the past week. Sales are noted aggregating 5000 to 6000 tons for scattered deliveries. The business can hardly be called new, as it consists largely of renewals of old contracts. Inquiries are fairly good, indicating further purchases in the near future. More Iron is now being shipped from the local furnaces than was the case about a month or so ago, indicating increased consumption. Prices show no tendency to advance, but maintain the level of the past with little indication of any lower point being reached unless conditions occur which are not now anticipated. Southern Coke Iron is rather quiet, which is only to be expected in view of the recent large purchases. The Charcoal situation appears to be very firm. The contest of endurance between the large malleable manufacturers and the Charcoal producers bids fair to settle itself in favor of the latter, who have maintained a firm front so long that they have evidently but a little longer to hold out. Large transactions have occurred in Charcoal Iron in other centers, so that the available supply is being narrowed for those who must use this class of Iron. Smaller consumers realize this state of affairs and are buying as their wants require at current market rates, with the evident belief that they will not be able to do better by postponing their purchases any longer. Quotations are as follows, cash, f.o.b. Chicago:

Lake Superior Charcoal	$16.50 @ $17.00
Local Coke Foundry, No. 1	14.50 @ 15.00
Local Coke Foundry No. 2	14.00 @ 14.50
Local Coke Foundry No. 3	13.50 @ 14.00
Local Scotch	15.00 @ 16.00
Ohio Strong Softeners	16.25 @ 17.00
Southern Coke No. 1	15 00 @ 15.50
Southern Coke, No 2	13.60 @ 14 00
Southern Coke, No. 3	13.25 @ 13.60
Southern, No. 1 Soft	13.50 @ 14.00
Southern, No. 2, Soft	13 25 @ 13 50
Southern Gray Forge	12 75 @ 13.25
Southern Mottled	12 75 @ 13 25
Tennessee Charcoal, No. 1	17.50 @ 18.00
Alabama Car Wheel	21.00 @ 23.00
Coke Bessemer	@ 16 00
Hocking Valley, No. 1	17.00 @ 17.50
Jackson County Silvery	17.00 @ 17.50

Spiegeleisen.—The demand for Spiegel has latterly been very light, but manufacturers firmly maintain the price of 20 % at $28.50.

Bar Iron.—The Bar-Iron situation is turning more in favor of the manufacturers. It is very difficult now to find any of the Ohio mills willing to take contracts for reasonably early delivery. Mills located nearer this market have picked up considerable business in the past week. Among the transactions reported is one for 1000 tons of Car Iron. Considerably more business could be done if the mills were in a position to guarantee delivery within the next six weeks. The large agricultural implement works are endeavoring to place orders for the deliveries covering the next 12 months, but find some difficulty in securing bids at satisfactory prices from mills having an established reputation. They are anxious to place orders at a little under present quotations, while the mills want a slight advance. Contracts in this way aggregating over 20,000 tons

are in sight. Part of this business may be turned to Steel, but the Iron contracts will certainly cover a large part of the amount stated. The ruling rate on recent transactions has been 1.60¢, half extras, Chicago, for Common Iron. Such of the valley mills as have been in shape te take orders have refused anything less than 1.50¢, at mill, for the Straight Bar orders. Soft Steel Bars continue to be quoted at 1.70¢, Chicago, from mill. Jobbers are quoting Bar Iron from store at 1.75¢ @ 1.80¢, and Bar Steel at 1.90¢ @ 2¢.

Structural Iron.—Figuring is now being done on a number of large buildings, one or two of which may be closed this week. The Beam transactions of the past week covered a few contracts of 300 to 500 tons, with a great many smaller orders. Prices are firmer on Beams in consequence of the expected shut down of Western mills, and are now quoted at 2.05¢ @ 2.25¢, Chicago. A considerable amount of Bridge work is in sight, some of which will be placed the latter part of this week. The elevated railroad for the World's Fair grounds, which will be several miles in length, will take a large quantity of Plates, Angles, &c. Another contract is about to be placed, comprising some 2000 tons of Bridge material. Mill shipments of Angles are quoted at 1.90¢ @ 2.10¢, Chicago; Sheared Plates, 2¢; Universal Plates, 1.90¢; Tees, 2.35¢ @ 2.40¢. Small lots from store sell at an advance on these prices.

Plates, Tubes, &c.—The boiler makers' strike has not ended, but the shops are again running tolerably full, the owners being able to secure more men from week to week. It now looks as if the workmen would be defeated in their contest. The demand for Plates is running about the same as last week. Current business is satisfactory, but large orders are rather scarce. This, of course, is due to some extent to the refusal of mills to accept carload orders or larger for early delivery. The situation in Boiler Tubes remains as it was, the local supply being very largely in the hands of one house. Quotations from stock are as follows: Iron Sheets, Nos. 10 to 14, 2.40¢ @ 2.50¢; Steel Sheets, $2.50¢ @ 2 75¢; Tank Steel, 2.20¢ @ 2.40¢; Flange Steel, 2 75¢ @ 3¢; Boiler Tubes, 65 % @ 75 % discount, according to the character of the order.

Sheets.—The situation in Black Sheets is becoming more difficult to describe, as so many mills are out of the market for the present, and others are refusing to consider inquiries for early delivery. It is possible that some mills may take orders for No. 27 Iron at 2.75¢ at mill, but they are very few. Prices are gradually working upward, as might be expected under the circumstances. Jobbers are quoting on a basis of 3.20¢ for No. 27 Iron, but say that this rate will be advanced by the time their regular fall trade sets in. Galvanized Iron is firm and jobbers are no longer selling at the extreme prices which recently prevailed. An effort is being made to work the price up to 60 and 10 % for Juniata quality from stock. The manufacturers report a continued good demand, which is in some cases beyond their ability to supply, owing to the expected shut down. They now ask 70 and 5 % @ 70 and 7½ % for delivery within the next month or two.

Merchant Steel.—Contracts were placed last week for about 7000 tons of special Steel Shapes by an agricultural implement works in the vicinity of Rock Island, covering requirements for the next 12 months. Other large inquiries are in the market and the amount of business closed in this line during the next two or three weeks promises to be very large. Competition is keen for this class of work, but, as before indicated, prices are not quite down to the low level which was reached last year. Mill quotations for Open-Hearth Machinery, Spring and Tire Steel are unchanged at 2¢ @ 2.25¢, Chicago. Dealers quote from store Open-Hearth Spring Steel, 2.50¢; Tire, 2 25¢ @ 2.30¢; Crucible Spring, 3.50¢ @ 4¢; Crucible Machinery, 4 50¢ @ 5¢; Tool Steels, 6.50¢ @ 8¢ and upward, according to quality.

Billets and Rods.—The past week has shown renewed activity in these markets, and inquiries approximating 17,000 tons of Rods have resulted in sales of between 11,000 and 12,000 tons, and while the price of $34 50 last quoted has been somewhat shaded, the willingness of consumers to buy in large quantities and the unwillingness of sellers to sell as far ahead as buyers were willing to buy indicates a very much improved condition of affairs. There are inquiries in the market for round lots of Steel Billets, and some small sales have been made very close to our last quotations, and some of the larger negotiations are likely to be brought to a head any day; while the market remains at $24.50, the indications are that this price is the very bottom and will not be shaded.

Rails and Track Supplies.—Business in Steel Rails is improving and local manufacturers look forward to increased demand from this time. The past week witnessed the closing of quite a number of contracts, but among them were no very large transactions. The rumor is denied that the Illinois Steel Company recently received a very large order for Rails. Prices are continued at $31 @ $31.50 for standard sections. Splice Bars continue to be in good demand in reasonable quantities at 1.70¢ @ 1.80¢ for Iron or Steel, according to the buyer. Track Bolts with Hexagon Nuts are quoted at 2.60¢ @ 2.70, according to quantity. Spikes continue to be held at 2.10¢ @ 2.15¢.

Old Rails and Wheels.—Sales are reported amounting to 2000 tons of old Iron Rails at $18.25 for deliveries spread over the next three months. These rails have been sold at a little above the present market value, but special circumstances are said to have governed the price. Under ordinary conditions it is believed that Old Rails could be purchased here at possibly under $18. Old Steel Rails have been sold at $13 for short pieces, while longer lengths are held at $14 @ $15, according to their condition. Old Car Wheels have been very quiet, with holders asking $14.50 @ $15 50, according to quantity.

Scrap.—The situation of Old Material is difficult to report. On the one hand, railroads and manufacturers find much difficulty in disposing of accumulations of Scrap as rapidly as they would desire, except at prices which are far below the intrinsic value of the material as related to the prices going for finished products, while on the other hand consumers who occasionally enter the market are unable to purchase from dealers at prices which are reported to be current. Dealers quote selling prices as follows, per net ton: No. 1 Railroad, $16 @ $16.50; No. 1 Forge, $15 @ $15.50; No. 1 Mill, $11; Pipes and Tubes, $11; Horseshoes, $16; Sheet Iron, &c., $7; Cast Borings, $5 75; Wrought Turnings, $8; Axle Turnings, $8.50 @ $9; Machinery Cast, $11.50 @ $12; Stove Plate, $9; Malleable Cast, $10; Car Axles, $18; Fish Plates, $17.25; Mixed Steel, gross ton, $10.50 @ $11; Coil and Leaf Steel, gross ton, $15.50. These are the prices asked by those having stocks and which parties are obliged to pay who purchase on time. Cash sales, which are now rather rare, would be made at better rates, and brokers who are not carrying stocks would also sell closer on such material as they are handling. A very fine lot of Railroad Wrought was sold direct to a consumer the past week at the equivalent of $15.50, net ton, Chicago, cash. Only two dealers in this market are known to have any considerable stock of Wrought on hand, the others having managed to clean up their yards. The small mills recently started in Indiana have taken quite a quantity of Old Material recently. The failure of a local Scrap dealer to-day will throw a considerable quantity of Mill Scrap on the market. It is said that he was carrying in the neighborhood of 1000 tons of this material.

Metals.—The Copper market has been very flat. Carload lots of Lake Copper continue to be held at 12½¢, and less than carload lots 12⅝¢. Casting Copper is quoted at 11⅝¢ in carload lots, and 11.50¢ in small lots. The inquiry for Spelter is very good, and some large sales have been made. One sale amounted to 250 tons, which was closed at a shade under the open quotation. It is now quoted at 4.70¢ spot, and 4.75¢ @ 4.80¢ futures. Brokers in Pig Lead report that July Lead is almost impossible to get, simply because the capacity of most of the refiners will be taxed to fill what orders they have in hand. This market opened very quiet with offerings at 3.97½¢, and sales of some 400 tons at that price and 4¢. On Wednesday signs were visible of a shortage in the metal, and values continued to rise until at the close prices were firm at 4 10¢ @ 4 15¢ asked for Desilverized, with little offering.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., June 28, 1892.

One half of the year has passed, which, on the whole, has been a source of serious disappointment to those engaged in the manufacture of Iron and Steel. The volume of business would ordinarily be considered large, but the increase in production has been so much larger that prices have been weak, almost without a single reaction. At this writing there are some slight indications of a check to the downward tendency in Finished Material, but Pig Iron is weak, and the general feeling is restless and unsettled. Something will doubtless depend upon the arrangements made in regard to the labor scale, but for the present there is no reason to suppose that prices in the immediate future will show very much change either for better or worse. The one thing that seems pretty well assured is that the fall trade will be larger than the one during the first half of the year.

Pig Iron.—The feeling in this department is very weak, and in spots prices are a little lower. Standard brands make a comparatively good showing, but even these are unsettled, and it is a serious question with makers whether to keep on making Iron and meet outside competition or blow out some of their furnaces. Whatever may be the outcome later on, the immediate outlook is certainly not encouraging, and lower prices, temporarily at all events, are not improbable. Considering how very low quotations are already, it seems impossible that there can be anything lower, but it is the constant chipping off, a little here, and a little there, and as the process has been continuous for the past six months, lower quotations are made almost imperceptibly. Of course there must be a change sometime, and as prices are at the lowest ever known, and cost at a point which seems to admit of no further reduction, it is not unreasonable to assume that the point at which selling prices will be adjusted in proportion to cost is not far distant. The coming month is likely enough to be one of weakness and irregularity, but that any general break in prices will be met with is an extreme improbability. Some leading companies are talking of $1 reduction, but as that has been more than anticipated in other brands, an annoucement of such revision of prices will have little or no effect on the general market. Meanwhile quotations are about as follows, subject to the

usual reductions on Southern Iron when delivered at points 50 to 100 miles south or west of this market:

American Scotch, No. 1x	$17.00 @ $17.50
American Scotch, No. 2x	16.00 @ 16.50
Standard Penna (Lake Ore), No. 1x	15.50 @ 16.00
Standard Penna. (Lake Ore), No. 2x	14.50 @ 15.00
Standard Penna. (Lake Ore), No. 2 plain	13.50 @ 14.00
Medium Quality, No. 1x	15.00 @ 15.25
Medium Quality, No. 2x	14.00 @ 14.50
Standard Virginia, No. 1x	14.50 @ 15.00
Standard Virginia, No. 2x	14.00 @ 14.50
Medium Va. and Southern, No. 1x	14.25 @ 14.50
Medium Va. and Southern, No. 2x	13.75 @ 14.00
Standard Penna. and Virginia Forge	13.50 @ 14.00
Ordinary Forge	12.75 @ 13.00
Hot-Blast Charcoal	18.50 @ 21.00
Cold-Blast Charcoal	24.00 @ 26.00

Muck Bars.—Market unsettled, but there is so little demand that prices are barely maintained. Nominal prices are $24 @ $24.50 at mills, but in some cases sales have been made at the inside figure delivered, although under ordinary circumstances makers would stand out for at least 50¢ @ 75¢ more money.

Steel Billets.—The prospect of an amicable arrangement with labor in the West has taken some of the stiffness out of the market for Billets and Slabs. Nominal prices are $24.75 @ $25, delivered at near-by points, but it would be impossible to place large lots at these figures. One or two 500 or 1000 ton lots have been taken at figures supposed to be near to $24.75, but for fall deliveries buyers' ideas are not over $24.50, and bids at that figure are not made with very much freedom. The disposition for the present is to hold off, under the impression that the low prices of pig metal will be reflected later on in quotations of Billets, &c.

Steel Rails.—Market not specially active, although there is rather more inquiry, and a somewhat larger business—chiefly in small lots An order for 40,000 tons is being competed for by foreign concerns, who have expressed their willingness to accept bonds, providing they secure the order for the Rails. It is, therefore, purely a matter of finance. If the money can be raised in this country the order will be placed here, otherwise it goes to Belgium, but the road will be built. Prices unchanged at $30, f.o.b. cars at mills.

Bar Iron.—The demand has been active during the past week in anticipation of a possible scarcity during the coming month. There is some talk of difficulties with labor at several of the mills hereabouts, but it is extremely improbable that any extended fight will be made, as the demand is not large enough to keep all the mills going, and the price not remunerative enough to induce capital to recede from the position it has assumed. Meanwhile the market is stronger, but as already intimated, this is due more to temporary influences than to any actual change of conditions. Prices remain at 1.65¢ @ 1.70¢ for city deliveries, and from $\frac{1}{20}$¢ to $\frac{1}{10}$¢ less at interior points.

Plates.—A very encouraging degree of activity may be noted at some of the Plate mills, and in nearly all cases slightly better prices are being realized. Two or three leading concerns have taken in a very large amount of bridge work, and for several weeks, if not for months, to come they will be virtually out of the market. In other cases, while there has been no accumulation of work, the demand for small lots is very much better, so that the outlook is regarded with much hopefulness. Prices are still lower than they ought to be, but manufacturers try to keep as near to the following figures as may be possible:

	Iron	Steel.
Tank Plates	1.80 @ 1.90¢	1.75 @ 1.85¢
Shell		2.10 @ 2.20¢
Flange	2.70 @ 2.90¢	2.30 @ 2.40¢
Fire Box	3.00 @ 4.00¢	2.60 @ 2.80¢
Special qualities		3.25 @ 3.75¢

Structural Material.—There has been quite a good deal of business placed recently, and some of the mills are very much crowded, while in other cases the position is just the reverse. There is a large amount of work in prospect, however, and as competition will be less keen there ought to be a general filling up without further cutting in prices. Some who are independently situated as regards work on hand are already asking more money, but there is no difficulty in placing orders at last week's prices, viz.: From 1.80¢ to 1.85¢, delivered, for Bridge Plates; 1.80¢ @ 1.90¢ for Angles, and 2¢ @ 2.20¢ for Beams, Channels or Tees, price depending on size of order.

Sheet Iron.—A good deal of activity is reported, and, with but few exceptions, mills have all the work they can handle. Prices unchanged, and for best makes quotations are about as follows:

Best Refined, Nos. 14 to 20	2.40¢ @ 2.60¢
Best Refined, Nos. 21 to 24	2.90¢ @ 3.00¢
Best Refined, Nos. 25 to 26	3.10¢ @ 3.15¢
Best Refined, No. 27	3.30¢ @ 3.40¢
Best Refined, No. 28	3.40¢ @ 3.50¢

Common, ¼¢ less than the above.

Quotations given as follows are for the best Open-Hearth Steel, ordinary Bessemer being about ¼¢ lower than are here named:

Best Soft Steel, Nos. 14 to 20	3¢ @ 3⅛¢
Best Soft Steel, Nos. 21 to 24	3¼¢ @ 3⅜¢
Best Soft Steel, Nos. 25 to 26	3½¢ @ 3¾¢
Best Soft Steel, Nos. 27 to 28	3¾¢ @ 4¢

Best Bloom Sheets, ¼¢ extra over the above prices.

Best Bloom, Galvanized, discount	@ 70 %
Common, discount	@ 72½ %

Old Material.—Market very dull, and prices difficult to quote, as much depends on whether the sale is under pressure to realize or in response to a legitimate want. Nominally, quotations are about as follows, but, as already stated, there is a good deal of irregularity. Iron Rails, $19.50, delivered; Steel Rails, $15.50 @ $16.50, delivered; No. 1 Railroad Scrap, $17.50 @ $18, Philadelphia, or for deliveries at mills in the interior $17.50 @ $18.50, according to distance and quality; $12.50 @ $13 for No. 2 Light; $13 @ $14 for best Machinery Scrap; $13 @ $14 for Wrought Turnings; $9 @ $10 for Cast Borings, and nominally $22 @ $24 for Old Fish Plates, and $15 @ $16 for Old Car Wheels.

Wrought-Iron Pipe.—Sales are not being pressed as much as they were some time ago, but requirements are freely met at 5 % @ 10 % less than nominal discounts, which are as follows:

Butt-Welded Black	57½ %
Butt-Welded Galvanized	47½ %
Lap-Welded Black	67½ %
Lap-Welded Galvanized	55 %
Boiler Tubes, 2¼ inch and under	60 %
Boiler Tubes, 3 to 6 inch	65 %
Boiler Tubes, 7 inch and larger	55 %

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fourth and Main Sts.,
CINCINNATI, June 29, 1892.

There has been less activity in the Pig Iron market during the week, but there was a fair volume of consumptive orders which in the aggregate were about 15,000 tons and embrace nearly all kinds of Iron for sale in this market. Standard brands of Iron continue to be firmly held, but it is to be observed that they are not selling in a large way and while full prices are realized for small lots, the general market cannot be said to have improved. The fact that there have been liberal sales here and in other Western markets during the month of June causes more confidence on the part of holders, but does not induce buyers to take hold any more freely. There is no great urgency to sell, but it is well understood that Iron can be bought at quotations for the remainder of this year, while buyers contend for longer deliveries, and it is rumored that they have in at least one instance secured a moderate quantity for delivery up to May next, but generally an advance is insisted upon for anything beyond this year. The more liberal buying of Iron in small lots for current consumption is taken as an indication that consumers are not receiving as much as they have been on previous contracts, and that when the market turns they will be anxious buyers for forward delivery. There appears to be an undertone of confidence, but at the same time there is plenty of Iron on hand that sellers would be glad to see go into consumptive channels promptly. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$13.75 @ $14.00
Southern Coke, No. 2	12.50 @ 13.00
Southern Coke, No. 3	12.00 @ 12.50
Ohio Soft Stone Coal, No. 1	16.00 @ 16.50
Ohio Soft Stone Coal, No. 2	15.00 @ 15.50
Mahoning and Shenango Valley	16.60 @ 17.25
Hanging Rock Charcoal, No. 1	19.75 @ 20.00
Hanging Rock Charcoal, No. 2	19.00 @ 19.50
Tennessee and Alabama Charcoal, No. 1	16.50 @ 17.00
Tennessee and Alabama Charcoal, No. 2	15.50 @ 16.00

Forge.

Gray Forge	11.50 @ 12.00
Mottled Neutral Coke	11.25 @ 11.50

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	18.75 @ 19.00
Lake Superior Car Wheel and Malleable	17.75 @ 18.00

Cleveland.

CLEVELAND, OHIO, June 27, 1892.

Iron Ore.—The buying movement has been a little less pronounced during the past week, although considerable Non-Bessemer Ore has been sold at prices considerably shaded from last year's quotations. Recent sales have been fully 10 % below those signalizing the opening of the market several months ago. The total sales to date may aggregate 4,500,000 tons, although this is doubtful. A few thousand tons of Red Hematite Bessemer have been sold at about $4.25, lower lake delivery, and a few sales of high-grade Specular Ores are reported. Nominal quotations are as follows:

No. 1 Specular and Magnetic Ores, Bessemer quality	$5.00 @ $6.00
No. 1 Specular and Magnetic Ores, Non-Bessemer quality	4.15 @ 4.65
Red Hematite Ores, Bessemer quality	4.25 @ 4.50
Red Hematite Ores, Non-Bessemer quality	3.40 @ 3.80

There has been a great fight over vessel rates during the past week, and the Escanaba rate has been forced back to 70¢ ₱ ton, with $1.05 as the charge from the head of Lake Superior. About 68,000 tons of Ore were unloaded on the local docks during the past week, as compared with only 8000 tons for the same week in 1891. The total receipts at all lower lake ports last week aggregated close upon 160,000 tons, as against 30,000 tons sent down in the same seven days last year. The shipments to furnaces keep up well, 30,000 tons having gone forward last week, while for the same week in 1891 only 21,000 tons were shipped away. Dealers look for an active buying movement early in July, at prices considerably shaded from those announced when the market was unexpectedly opened in February. Not even half of the Ore to be mined this year has yet been sold, and in the present condition of the Pig-Iron market no improvement in prices can be expected. Non-Bessemers are said to be selling with considerable freedom this week at $3.40 @ $3.65, Cleveland delivery.

Pig Iron.—Only a few scattering sales are reported, but the decrease in the amount of stocks on hand encourages dealers to believe that a change for the better is near at hand. All in all, the

record of the past seven days is an improvement over that of the preceding week, although the amount of Iron sold was small. Dealers look for better prices early in July, and this, of course, means a better demand. It seems almost certain that the heavy cut in production will bring about this result. Present quotations are as follows:

Nos. 1 to 6 Lake Superior Charcoal	$17.50 @ $18.05
Nos. 1, 2 and 3 Bessemer, per ton.	15.00 @ 15 20
No. 1 Strong Foundry, per ton..	15.00 @ 15 50
No. 2 Strong Foundry, per ton..	14.00 @ 14.50
No. 1 American Scotch, per ton.	..... @ 15.60
No. 2 American Scotch, per ton.	.....@ 14.60
No. 1 Soft Silvery, per ton.....	15.50 @ 16.50
Mahoning and Shenango Valley Neutral Mill Irons, per ton....	13.50 @ 14.00
Mahoning and Shenango Valley Red Short Mills, per ton.....	14.00 @ 14.50

Old Rails.—No change of importance has occurred, and Old Americans are to be had in ample quantities at $19 @ $19.50.

Barb Wire.—The demand is excellent and the mills are crowded to their full capacity. The Wire manufacturers are much elated over the outlook for the season.

Nails.—There is a fair demand, and Steel Wire Nails are still quoted at $1.70 ℔ keg in stock. Cut Nails are in fair demand at $1.65 ℔ keg.

Scrap.—The market is dull and prices are uncertain. Quotations are nominally as follows: No. 1 Railroad Wrought, $16.25 @ $16.50; Cast Scrap, $12 @ $12 25; Wrought Turnings, $11 @ $11.50, Cast Borings, $8 @ $8.50.

Bar Iron.—The market continues active, and the mills are well engaged. Prices are unchanged, 1.65¢ being still paid at the mills.

Pittsburgh.

Office of *The Iron Age*, Hamilton Building, PITTSBURGH, June 28, 1892.

The question as to whether the various wage scales which expire on the last day of this month will be amicably arranged between the manufacturers and the Amalgamated Association continues to be widely discussed, not only by those directly interested, either as workmen or employers, but by the entire business community as well. In a city like this, where the manufacture of Iron and Steel is the chief and leading industry, a shut down of the mills causes hardships in every other class of business. For this reason every move made by either side that has a bearing on the settlement of the labor question for another year is watched with intense interest. Since our report of last week, some conferences have been held between manufacturers and workmen, but without result. As matters look now a strike in many of the mills is inevitable. It is believed, however, that the Amalgamated scale will be signed by some of the mills during the present week, which for various reasons are not in position to stand a siege of idleness. The situation at Homestead is grave in the extreme, and unless the unexpected happens, a strike is sure to come. Every preparation has been made by the Carnegie Steel Company, Limited, to fortify their position in case the conflict should be a prolonged one. Ample arrangements have been made to protect their large interests at Homestead in case trouble should arise between their workmen and the strikers. All indications point to a bitter conflict and a long strike between the firm and their workmen, unless a settlement should be reached at the last minute, which, however, is not expected. The situation here at the present time is a precarious one, and regrets are expressed on all sides that a peaceful settlement of the difficulties was not effected. There has been little change in the Iron or Steel markets since our last report. Mills everywhere are making desperate efforts to clean up all orders on hand before July 1, in order to be prepared for the coming siege of idleness. In many lines buyers have largely anticipated their wants, and this has caused a stiffening to some extent in prices. It is not expected that there will be much done in July or August, although, as stated above, some of the mills will sign the Amalgamated scale during this week and continue in operation.

Pig Iron.—The prospective shut down of the mills on account of labor troubles is having the effect of causing furnace operators to redouble their efforts to dispose of their product, with the result that prices have weakened to a visible extent. The offering of favorable prices to buyers, however, has not had the effect of stimulating sales, and no large transactions for the week under review are reported. The recent activity in the sales of Forge Iron, caused by the mills working up to the limit of their capacity, has disappeared, and this brand of Iron is now as dull as the other kinds. The large reductions in stocks and output, as shown by recent reports, are received by the trade as an indication that the situation will soon improve and that bottom prices have probably been touched. It is also believed that as soon as present labor troubles have cleared away a buying movement will set in, as it is known absolutely that stocks in the hands of consumers are very small on account of the hand to-mouth buying policy which has been prevalent for so long. Within a week or ten days Mary stack of the Ohio Iron and Steel Company at Lowellville, Ohio, will be closed down for repairs. A new bosh will be added and some other improvements made. This furnace has been in successful operation for more than two years and in that time has made over 100,000 tons of Ohio Scotch Foundry Iron, of which 86½ % was strictly No. 1. Another stack in the Shenango Valley will probably go out early in July for repairs. Sales for the week under review were confined to small lots and at prices ruling the previous week, which we quote as follows:

Neutral Gray Forge	$12.60 @ $12.75,	cash
White and Mottled	12.25 @ 12 50,	"
All-Ore Mill	12.50 @ 12.75,	"
No. 1 Foundry	14.35 @ 14.60,	"
No. 2 Foundry	13 35 @ 13 60,	"
Bessemer Iron	14.00 @ 14.15,	"
Cold-Blast Charcoal	24.00 @ 24.25,	"

We report a sale of 5000 tons of Bessemer, equal deliveries from July to November, at $14.15, delivered to buyer's mill; 3000 tons of Bessemer for July, August and September delivery, at $14, delivered and a number of other sales ranging from 500 to 1000 tons for delivery from July to September at prices ranging from $14 to $14.10. It is reported that $14 has been shaded slightly in several cases where the Iron was for prompt delivery and a favorable freight rate was available We also note a sale of 500 tons of Gray Forge at $12.65, delivered, for July and August delivery.

Ferromanganese.—The market does not show any change; a fair amount of domestic is being sold at prices ranging from $62 to $62.50, delivered.

Soft Steel Billets.—As we note elsewhere in this issue, the Amalgamated Association has rescinded the action taken some time since by which all mills under its jurisdiction were to remain idle for a period of two weeks, to date from the first Monday in July. As the recent sharp advance in the price of prompt Billets was brought about by the expectation that all Steel plants would be idle during this period, it is probable that this action of the Amalgamated Association will check any further advance in the price of Billets. Should one or two mills making Billets sign the Amalgamated Steel scale, a decline in prices may be the result. Of course there may not be any signers to the Steel scale for some time yet, but it is impossible to tell just what will be done within the next week in this respect. Billets for prompt delivery continue to command from $23.50 to $24, and in one case the last named price has been refused. We are not advised of any contracts being closed for Billets for late delivery.

Steel Rails.—Contrary to expectations, no change was made in prices at the meeting of the Steel Rail Association held last week. It is not expected that the Edgar Thomson mill will participate in the coming shut down of the other mills, as the wages scale in force at that plant was agreed to in January last for a period of three years, and as repairs are not necessary, it is thought this mill will continue in operation right along. Prices remain unchanged, being $30, f.o.b. at mill, for standard sections.

Wire Rods.—The movement in Wire Rods is very slow, little or no buying doing when for immediate delivery. Mills are well sold up for some time yet, and buyers seem to be fixed in the same way. For Rods for delivery after July $31.75 @ $32 is asked, although one or two makers state that they will not book any orders for future delivery at less than $32 at mill. The Wire Rod makers and the Conference Committee of the Amalgamated Association held a meeting last week for the purpose of arranging a wage scale for Wire Rod mills. It is understood that several discrepancies exist which the makers are anxious to have remedied before the scale is signed. It is not expected that there will be any trouble, however, in settling these points of difference, and it is believed that the Wire Rod scale will be arranged without any difficulty.

Steel Plates.—The heavy buying for the past two or three weeks in anticipation of the shut down of the mills is about over. It is understood that makers have cleaned up orders pretty well and are now in position to close down for a considerable length of time. The active demand caused by buyers largely anticipating their wants has stiffened up prices considerably, but we make no change in our quotations of last week, which are as follows: Flange, 2¢ @ 2.10¢; Fire Box, 3.50¢ @ 3.75¢; Shell, 2¢ @ 2.10¢; Tank, 1.75¢ @ 1.85¢, f.o.b. Pittsburgh.

Structural Material.—The large demand brought about by buyers anticipating their wants has stiffened prices to some extent. Should a lengthy shut down of the mills making Structural Shapes take place an advance may come, as we are advised that stocks are pretty low. We repeat quotations of last week, as follows: Beams and Channels on a basis of 1.90¢ @ 1.95¢ for desirable orders and 2¢ @ 2.05¢ for small lots; Angles, 1.80¢ @ 1.85¢; Universal Mill Plates, Iron, 1.80¢ @ 1.90¢; Universal Mill Plates, Steel, 1.80¢ @ 1.90¢; Tees, 2.35¢; Refined Iron Bars, 1 65¢ @ 1.70¢; Steel Bars, 1.65¢ @ 1.70¢; Sheared Bridge Plates, 1.95¢ @ 2¢.

Merchant Steel.—A fair demand for the different grades is going. Orders for agricultural Steel have picked up considerably of late, and a good business is looked for from now until the close of the season. A very satisfactory demand for the different grades of Tool Steel is going, and as a whole the situation is much better than a month or six weeks ago. Competition among the mills keeps prices from advancing to any great extent, but in some lines better figures are being obtained. We quote as follows: Tool Steel from 7¢ up, according to grade; Crucible Spring Steel, 3¼¢ @ 4¢; Crucible Machinery Steel, 4¼¢

@ 5½¢; Spring, Tire and Machinery Steel from 2¢ to 2.40¢, according to quality.

Barb Wire.—There is nothing new to report. A number of the mills will doubtless close down in July for repairs. Orders are pretty well cleaned up, in order to be prepared for this stoppage. Prices remain as follows: $2 25 @ $2.30 for Painted and $2.65 @ $2.70 for Galvanized, f.o.b. at factory, the lower price named being in carload lots.

Muck Bar.—There is no improvement in demand, and in view of the coming shut down of the mills none is expected. While some trade papers continue to quote Muck Bar at $24 @ $24.50, delivered at buyers' mill, we are informed that no Muck Bar of standard quality has been sold at less than $24 50, and in some cases a slightly better price than this has been obtained. We quote best grade of Muck Bar at $24.50, delivered at buyers' mill.

Wire and Cut Nails.—As in the case with other lines of manufacture, the Wire and Cut Nail mills expect a shut down for a considerable length of time, and as a result few orders for delivery during July and August have been booked. This month always has proved to be a dull month in both Wire and Cut Nails, and as it is expected that many of the mills will be idle during this two months, but few orders are being received. As an exception to other lines, the prospective close down of Wire Nail mills did not stimulate buying to any extent, which is taken as an indication that stocks in the hands of jobbers are pretty large. Prices do not show any change and we quote Wire Nails at $1.55 @ $1.60 in carload lots, while $1.65 is obtained for less quantities. The Cut Nail mills are doing very little business and have been for some time past. The demand for Cut Nails is growing less year by year, and it is believed that within a very short time a few mills will be able to take care of all the business going. We quote the market at $1.47½ @ $1.50 for carload lots, 30¢ averages, in Wheeling and Mahoning Valley districts. A few Iron Nails are still being made and we quote these at $1.50 in carload lots for 30¢ averages in Shenango Valley district.

Wrought-Iron Pipe.—With the exception of a few fair-sized orders placed during the past week there is no change to note in this industry. Prices do not show any improvement whatever, and in view of the active competition among the mills for the business being offered none is expected. It is stated on good authority that the best of feeling does not prevail among some of the members of the Wrought Iron Pipe and Tube Manufacturers' Association, and this is given as one reason for the active competition that is prevailing. There is no change in discounts and but little attention is being paid to these discounts by makers.

Skelp Iron.—The improvement in demand and also in price noted several weeks since continues, and some very fair orders are being placed. The several gas lines now being constructed are the cause of this improvement in the demand. The recent discovery of gas in large quantities in what is known as the Pinhook district, a few miles from Pittsburgh, will probably cause an active demand for large sized Pipe. This in turn will cause a good demand for Skelp. Prices are unchanged and we quote as follows: 1.55¢ @ 1.60¢ for Grooved and 1.70¢ @ 1.75¢ for Sheared, four months, or 2 % off for cash.

Manufactured Iron.—In two days from now the Amalgamated scale governing wages in rolling mills in the Pittsburgh district will have expired, and at this writing a strike in a number of the mills seems certain. It will be remembered that some time since it was printed in these columns that the Amalgamated Association would insist on a shut down of mills for two weeks to commence from the first Monday in July. We are now informed that this action of the association has been rescinded and all mills that sign the scale will be allowed to run right along or stop for repairs, as they see fit. This action of the Amalgamated Association in doing away with the two weeks shut down is looked upon by many in the trade as a very sharp move, and it is certain that had the mills signed the Amalgamated scale as promptly as it was signed last year, the two weeks shut down would have been insisted upon. As it is, however, mills that sign the scale will probably continue in operation right along and secure what trade is going. Since our report last week another conference was held between the Bar Iron manufacturers of the Pittsburgh district and the Amalgamated Association, but no results looking to the signing of the scale were obtained. The manufacturers insist on their scale based on $4.50 for puddling being adopted, while the Amalgamated Association, on the other hand insist just as strongly on the Amalgamated scale based on $5.50 per ton for puddling being adopted. Neither side seems inclined to offer a compromise, and as long as this continues a settlement is out of the question. Within the past week three firms have signed the Amalgamated scale, two of these signing the scale governing wages in rolling mills and one signing the Steel scale. The Tyler Tube & Pipe Company of Washington, Pa., and the Muncie Nail Company of Muncie, Ind., signing the rolling mill scale, the Oliver Iron & Steel Company of Pittsburgh signing the Steel scale for the converting department and the blooming mill of their Clapp Griffith plant. It is stated on good authority that a number of other signatures to the Iron scale are expected during the present week. The recent buying brought about by the coming shut down of a number of the mills has stimulated prices, and we quote No. 1 Bars of the best grade at 1.60¢ and 1.65¢. It is reported that in several cases 1.70¢ was obtained. Bars made from Old Rails we quote at 1.50¢ @ 1.55¢; Steel Sheared Plates we quote at 1.85¢ @ 1.90¢, and Iron Sheared Plates at 1.75¢ @ 1.85¢; No. 24 Sheet at 2.40¢ @ 2.50¢; all 60 days, 2 % off for cash.

Scrap Iron and Steel —Since our report of last week we are not advised of a single transaction in Old material of any kind that would aggregate even a respectable amount. Dealers in Scrap material endeavoring to make sales have offered both Iron and Steel Scrap material at exceedingly low prices, but in nearly every instance their efforts to sell were met with the remark that in view of the shut down of the mills no material of any kind was wanted. In the absence of business on which to base sales, we can only repeat our quotations of last week, which are as follows: No. 1 Railroad Wrought Scrap, $14.50 @ $15 ℔ net ton; Cast Scrap, $11 @ $11.50 ℔ gross ton; Billet and Bloom Ends, $15.50 @ $16; Cast-Iron Borings, $7 @ $7.50 ℔ gross ton; Mixed Country Steel, $13 ℔ gross ton; Railroad Coil Springs, $17 @ $17.50 ℔ gross ton; Leaf Springs, $19.50 @ $20; Old Steel Axles, $20 @ $20.50; Machinery Cast Scrap, $11.50 @ $12.

Old Rails.—As is the case with the Scrap Iron and Steel market, there is no demand for either Iron or Steel Rails. Efforts to sell Old Iron Rails in Pittsburgh during this week at $19.50 delivered at buyers' mill were unsuccessful. Old Iron Rails cannot be sold at any price, offers at $19 @ $19.50 having been declined. We repeat nominal quotations of last week, as follows: Old Steel Rails which do not require sorting, $15 50 @ $15.75; miscellaneous lengths we quote at $15 @ $15.25, and long lengths at $15.75 @ $16.

St. Louis.

Office of *The Iron Age*,
Bank of Commerce Building,
ST. LOUIS, June 27, 1892

Pig Iron.—The past week was one of the most interesting, so far as volume of business is concerned, which this market has experienced for some months past. Sales were principally made for deliveries during July and August, and while it is true prices were low, they were really no lower than the same Irons could have been purchased for two months since. The gradual shutting down of furnaces is having a beneficial effect on the output, which continues to show a steady decrease. A serious question confronts this industry, however, in the anticipated labor troubles. Should the matter resolve itself into a strike, Finished Iron, it is true, would be largely benefited. But, on the other hand, Pig Iron would receive a black eye, and prices would more than likely go even lower than at present quoted. Should this occur, however, additional furnaces would be forced to blow out and they would probably remain out until the market showed conclusively that it was in a position to stand their re-entry. Buyers should take these points into consideration in making their purchases, and by so doing may probably be able to purchase advantageously, which is a difficult thing to do in the present state of the market. Inducements by furnacemen are not so tempting as they were a few weeks since, proving to a certain extent either one of two things—that the market is in better shape, or that prices have reached a level that precludes further shaving. For ordinary quantities the following quotations prevail, which are for cash, f.o.b. St. Louis:

Southern Coke, No. 1 Foundry,	$14.00 @ $14.25
Southern Coke, No. 2 Foundry,	13.25 @ 13.75
Southern Coke, No. 3 Foundry,	13 0 @ 13.00
Gray Forge,	12.25 @ 12.50
Southern Charcoal, No. 1 Foundry,	16 25 @ 16.75
Southern Charcoal, No. 2 Foundry,	15.50 @ 16.00
Missouri Charcoal, No. 1 Foundry,	14 50 @ 15.00
Missouri Charcoal, No. 2 Foundry,	14 00 @ 14.25
Ohio Softeners,	17.00 @ 17.25

Bar Iron.—A steady trade is reported by both mills and jobbers. There is an unusual amount of uncertainty prevalent, caused by the anticipated labor troubles, and jobbers particularly are undetermined what action to pursue. It is pretty generally believed that should a strike ensue it would only be of short duration, while there are many well-informed people who do not look for more than the usual shut down for repairs, &c. The local market is quiet but steady. Mills quote 1 62½¢ @ 1.65¢, half extras, East St. Louis. Jobbers quote 1.70¢ @ 1.75¢ for lots from store.

Barb Wire.—The demand continues to be fairly active, but prices are inclined toward weakness. The exteme wet weather prevailing in the West has caused some considerable let up in the demand and the season is now too far advanced to expect much improvement until the early fall months. Mills have issued a new price-list under date of 23d inst. as follows: Painted, $2.30; Galvanized, $2.75 for carload quantities. Less than car lots 10¢ ℔ cwt. additional. The above prices are subject to 60 days, or 2 % discount for cash.

Wire Nails.—This department has somewhat improved since our last report. The effort of the mills to withdraw the extreme low quotations which were freely made ten days since has been successful and it now seems quite probable that prices are in a position to be steady even if they do not advance. Local mills quote $1.75 rate for any quantity, which is an advance of about 10¢ ℔ keg over the prices quoted last week.

(*By Telegraph.*)

Pig Lead.—During the past few days this department has improved materially. A fair demand is in progress and sales are reported at 4¢. Sellers are firm at 4.05¢, with no sales, however, at this figure. It is generally thought that the advance noted will be merely temporary.

Spelter.—This metal does not change either way. Sales are light and offerings at 4.60¢ are not taken. There does not appear to be much chance of any immediate improvement in this department so far as prices are concerned.

John H. Heimbuecher, American Central Building, St. Louis, Mo., has severed his connection with the Old Colony Rivet Company, with whom he was associated some 15 years and has accepted the agency in the West for the Falls Rivet & Machine Company of Cuyahoga Falls, Ohio. With 15 years' experience Mr. Heimbuecher is in a position to appreciate the wants of the trade and to cater to the same accordingly.

Louisville.

LOUISVILLE, KY., June 27, 1892.

There has been no improvement in prices and considerable difficulty in placing Iron. Furnaces are willing to sell for deliveries throughout the year at current figures and are not hopeful for an advance. The expected action of the Pennsylvania furnaces in further reducing prices in Central Pennsylvania and New England, together with low offers of Virginia Irons, does not lead Southern furnaces to expect much assistance from that territory, and it is probable that sales of their Iron there will be temporarily curtailed. The encouraging feature of the situation is that there will be no trouble between manufacturers and the Amalgamated Association, and that increased buying will follow, as unquestionably many orders have been held in abeyance awaiting the settlement of this question. The indications of another heavy crop are such as to promise excellent business in the West, and it is felt that in the event of these expectations proving true, the Iron interest cannot but be benefited in the increased prosperity that will follow. We quote for cash, cars, Louisville:

Southern Coke, No. 1 Foundry	$13.75 @ $14.25
Southern Coke, No. 2 Foundry	12.75 @ 13.25
Southern Coke, No. 3 Foundry	12.00 @ 12.50
Southern Coke, Gray Forge	11.50 @ 12.00
Southern Charcoal, No. 1 Foundry	15.75 @ 16.75
Southern Car Wheel, standard brands	18.00 @ 19.00

Detroit.

WILLIAM F. JARVIS & Co. of Detroit, Mich., under date of June 27, 1892, write: There has been continued activity in Lake Superior Charcoal Iron. The purchases, however, have been more numerous, but not of quite so large volume as reported during the previous few weeks. The lots range in size from 300 to 800 or 1000 tons. Indications are now that the buying has been nearly completed, with the exception of a few of the large users, who have yet to come into the market, but the general malleable trade in nearly all sections of the country have made their contracts. It will be a matter of considerable interest to know just what the balance of Iron on hand, unsold, will be at the furnaces July 1. It certainly will show quite a large falling off. With the exception of Lake Superior Charcoal, the trade has been very quiet indeed, no large transactions for any grade of Southern or Ohio Coke Irons having been reported. The usual current demand from the smaller foundries has been kept up fairly well, with prices unchanged and quotable to-day as follows:

Lake Superior Charcoal, all numbers	$16.50 @ $17.00
Lake Superior Coke, Bessemer	16.00 @ 17.00
Lake Superior Coke Foundry, all ore	16.50 @ 17.00
Ohio Blackband (40 per cent.)	17.00 @ 17.50
Southern No. 2	15.00 @ 15.50
Southern Gray Forge	13.25 @ 13.75
Jackson County (Ohio) Silvery	17.75 @ 18.25

New York.

Office of *The Iron Age*, 96-102 Reade street,
NEW YORK, June 29, 1892.

Pig Iron.—Although the announcement will not be officially made until after July 1, there is little doubt that the prices of the Thomas Iron Company will be reduced $1 ℔ ton, so that our quotations are merely nominal. The market is exceedingly dull, sellers reporting very little business. We quote Northern brands at $15.50 @ $16 for No. 1; $14 50 @ $15 for No. 2; $13.50 @ $14 for Gray Forge, tidewater. Southern Iron, same delivery, $14.50 @ $15 for No. 1; $13.75 @ $14.50 for No. 2 and No. 1 Soft; $13.25 @ $13.50 for No. 3 Soft; $12.75 @ $13 for Gray Forge.

Spiegeleisen and Ferromanganese.—A lot of 100 tons of Wigan Ferromanganese has been freely offered in this market during the past week under somewhat peculiar circumstances by an outside party. It claimed that it was purchased under a misapprehension, due to a mistake in reading a cable code price at £10, c.i.f., instead of £11, c.i.f. It has been offered at $59 without finding any taker as yet.

Billets and Rods.—In this market there is absolutely nothing doing either in foreign or domestic.

Steel Rails.—No transactions of any consequence are reported by the Rail mills. Rumors of business for Ohio delivery, for the Great Northern and for the Pacific Coast do not seem to possess any foundation. On the 1st of this month all the mills together had about 300,000 tons on their books, and, so far as the Eastern mills are concerned, have probably gained considerably on this during June. The price remains stationary at $30 for standard sections, Eastern mill.

Manufactured Iron and Steel.—During the week contracts have been closed for two structures calling for about 1200 tons of Beams. Some round lots of Bars have also been placed with local merchants, and in some instances a slight advance has been secured. Plate orders have not been numerous or important. As yet the trouble with the Architectural Iron workers has not been serious. The principal interest centers, of course, on the situation in Pittsburgh, with indications that the contest will not be protracted, so far as the Iron mills are concerned. Nominal prices, subject to concessions on good specifications, are as follows: Beams, 2.25¢ @ 2.65¢ for small lots and 2.15¢ @ 2.50¢ for round lots, according to sizes; Angles, 1.85¢ @ 2¢; Sheared Plates, 1.8¢ @ 2.25¢; Tees, 2.30¢ @ 2.75¢; Channels, 2.25¢ @ 2.50¢, on dock. Car Truck Channels, 2¢ @ 2.10¢. Steel Plates are 1.8¢ @ 1.9¢ for Tank; 2¢ @ 2.25¢ for Shell; 2.30¢ @ 2.65¢ for Flange; 2.5¢ @ 2.75¢ for Marine, and 3¢ @ 3.25¢ for Fire Box, on dock; Refined Bars are 1.7¢ @ 1.9¢, on dock; Common, 1.6¢ @ 1.65¢. Scrap Axles are quotable at 2¢ @ 2.10¢, delivered. Steel Axles, 2¢ @ 2.1¢, and Links and Pins, 2.05¢ @ 2.20¢; Steel Hoops, 1.90¢ @ 2¢, delivered.

Track Material.—The market is very dull, with quotations as follows: Spikes, 1.90¢ @ 2¢, delivered; Fish Plates, 1.55¢ @ 1.60¢, at mill; Track Bolts, square nuts, 2.50¢ @ 2.60¢, and hexagon nuts, 2.70¢ @ 2.80¢, delivered.

Metal Market.

Copper.—Business has been slow. Negotiations with consumers reveal the fact that a majority of the larger concerns are comfortably off for supplies, and the presumption is that recent purchases from bankers' holdings have filled up quite a gap. There are indications also of contracts having been made elsewhere, including with some prominent producers, and it is no secret that certain smaller concerns have been better sellers than holders. In any event, the market for Lake Superior product has a rather flat appearance at the present time. For Ingot 12¢ stands as the popular "nominal" price, but 11¼¢ is still common in current offering and a rate at which there appears to be more sellers than buyers. Cakes and Wire Bars are quoted about ⅛¢ @ ¼¢ over Ingot, according to delivery required and size of lot. Common casting brands at 11¢ are freely offered; sales have been running light and the demand at present is not meeting former expectations. Apropos of the producers' agreement, which we discuss editorially, James Lewis & Son, Liverpool, remark in their circular of June 17:

"The nine principal mining companies in the United States have agreed among themselves that their production shall, for the year commencing July 1 next, be 100,893 tons, against 90,625 tons in 1891. The production not included in this agreement amounted to 36,160 tons in 1891, when the total was 226,785 tons. European mining companies, producing about one-half of the total production, have agreed to place a limit on their output, in some cases reducing by 5 % that of the year 1891, while in others they have been allowed an increase, amounting in one important instance to 10 %. Chilian producers are not included in the agreement, their production last year having suffered considerably from the war. We may, therefore, look for some increase from this source. Instead, therefore, of a reduced production for the coming 12 months, an increase of fully 15,000 tons appears assured; while for the year 1892 it will probably be much larger, no limit having been placed on production for the first half of the year either in the United States or elsewhere. The future of values will mainly depend upon whether the consumption will be sufficiently large to absorb this increased quantity. Should it prove equal to that of last year, it probably will, as European stocks then decreased 11,000 tons."

Pig Tin.—The movement in prices has been within decidedly narrower limits the past week, and the market seems to have developed rather steadier tone. That the controlling influence centers in just about the same localities that it did when speculation was livelier and the fluctuation in values wider, is obvious, however, and there is as much uncertainty shrouding the market. Hence ventures in futures are engaged in cautiously, and purchases for consumption gauged as closely as possible by actual requirements, since it remains to be determined whether the "bull" interest is strong enough to not only carry their present surplus holdings, but to take care of future supplies. It is suggestive in this connection that the discount on futures in the London market has been widened to £1. 10/ @ £2, whereas futures still command a premium in New York, thus lessening the chances for profitable shipments from this quarter for delivery on London "short" sales, and at the same time encouraging the suspicion that the leading manipulators may be unload-

ing futures in the foreign market while supporting spot prices there. Looked at from any point of view, the market is undoubtedly more than usually dangerous for outsiders. Transactions recorded during the past week involve a total of about 350 tons, chiefly prompt June and July delivery at 21.20¢ @ 21½¢, including some parcels purchased against sales of shipments from the Straits in the London markets. At the close bids were not above 21.15¢, net cash, for spot lots, but 21½¢ stood as low rate with sellers.

Pig Lead.—The position of buyers and sellers has been reversed during the past few days. Instead of anxiety to sell there is now a very reserved offering and supreme indifference on the part of buyers has given place to rather livelier interest. With this change there is a turn for the better in values, and, upon the whole, a more cheerful market. At from 4.10¢ up to 4.15¢ about 400 tons have been sold, while up to 4.20¢ @ 4¼¢ was realized for single carloads. Bids of 4.15¢ prevailed at the close in this market and relatively as good figures were advised from Western markets.

Spelter.—Eastern consumers are still very indifferent buyers of this metal, and, now that the European producers combination has ceased to exist, the support of possible export business has departed. As an offset to this, however, producers gain more or less advantage from good purchases latterly by Western galvanizers that promise to take up a considerable percentage for production some little time ahead. Early shipments have realized 4.80¢ @ 4.85¢ here, and the prices are quoted on favorite brands for August shipment.

Antimony.—There has been no change to speak of. Prices show no more than about ¼¢ fluctuation and dealings are still of commonplace character. We quote at 10¾¢ @ 11¢ for Hallett's, 11¾¢ @ 12¢ for LX and 14½¢ @ 14¾¢ for Cookson's, in wholesale quantities.

Tin Plate.—Roofing size Terne Plates, the spot supply and assortment of which are rather poor, command somewhat higher prices for the time being. Coke finish and Charcoals are, however, obtained without difficulty at former quotations, the supply of these being ample. In some slightly lower rates are named on ordinary Coke Finish Bessemer Steels. We quote as follows for full weights: Coke Tins—Penlan grade, IC, 14 x 20, $5.25; J. B. grade, do., $5.37½; Bessemer do., $5.25; light weights, 100-lb, 10¢ less; 95-lb, 20¢ less; 90-lb, 30¢ less than full weight; Siemens Steel, $5.37½. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60 @ $5.65; Siemens Steel, IC basis, $5.75 @ $5.80; IX basis, $6.80. IC Charcoals—Melyn grade, ½ X, $6.40; for each additional X add $1.50; Allaway grade, $5.75; Grange grade, $5.85; for each additional X add $1.20. Charcoal Ternes—Worcester, 14 x 20, $5.75; do., 20 x 28, $11.45; M. F., 14 x 20, $7.37½; do., 20 x 28, $15.25; Dean, 14 x 20, $5.45; do., 20 x 28, $10.80; D. R. D. grade, 14 x 20, $5.35; do., 20 x 28, $10.40 @ $10 45; Mansel, 14 x 20, $5.30; do., 20 x 28, $10.45; Alyn, 14 x 20, $5.45; do., 20 x 28, $10.65; Dyffryn, 14 x 20, $5.65; do., 20 x 28, $11. Wasters—S. T. P. grade, 14 x 20, scarce; do., 20 x 28, $10; Abercarne grade, 14 x 20, scarce; do., 20 x 28, $9.80.

Hoadley Cochran, president of the defunct Ainsley-Cochran Foundry Company, at Louisville, Ky., and Thomas F. Smith, who was also connected with the establishment, are preparing to start up a machinery supply and brokerage business in that city.

Coal Market.

At the meeting of agents, appointed for Wednesday afternoon, the design was to advance the prices of Anthracite 15¢ @ 25¢ ℔ ton, and some were prepared to go still further, predicting that Stove would go to $5 before the snow flies. For all this there is no lack of Free Burning, and straggling lots in the harbor can be got a shade below the schedule from outside parties. Lehigh, though not in the combine, follows closely in sympathy. One lot of Lehigh Pea sold this week at $2.25. The telegraph brings news of the death of Mrs. Ario Pardee, an event having an important bearing on the settlement of an estate valued at several million dollars.

The White Star Steamship Company's contract for about 140,000 tons of Bituminous Coal, to be delivered during the ensuing year, has been awarded to the agents of the Pocahontas Coal.

The Reading collieries last week started work with four days of ten hours each, instead of nine hours, as heretofore, and all of those drowned by the recent heavy rains have resumed operations. Shipments for the week ending June 18 show a large decrease from the corresponding week last year, but the comparison since January still shows a gain of nearly 1,000,000 tons over the same time in 1891. The official statement is as follows:

	1892. Tons.	1891. Tons.
Wyoming region	480,988	499,017
Lehigh region	104,314	139,599
Schuylkill Region	230,677	264,232
Total	815,979	902,848
Total for year to date	17,707,788	16,726,992

The production in May was 3,531,000 tons, an increase of 191,586 tons, but this is said to have been unintended.

Pittsburgh papers speak of unusually large shipments to the ports on Lake Erie, equal to 27,000 tons a day.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, June 29, 1892.

Speculation in Pig Iron warrants has been moderate. Scotch prices have changed very slightly, but Cleveland advanced to 42/6, while Hematites sold at as low as 49/. It is reported that the London syndicate have transferred their holdings of warrants to other outside hands and there is yet a scarcity of the warrants for prompt delivery. The advance in Cleveland is attributed to continued diminution of stocks and consequent disinclination to sell. At present there are only 40,000 tons in warrant stores. The stock of Scotch has further declined and is now 431,000 tons. Latest quotations on warrants were 41/5 for Scotch, 42/6 for Cleveland and 49/ for Hematite.

In Pig Iron a large business has been done during the week at regular prices. Advices from the American market are still employed for speculative purposes and used to explain both declines and advances in prices

Bear operations on Continental accounts have somewhat unfavorably affected the Copper market, as also did the depression in Tin. The agreement to restrict production is having no visible effect upon the market.

No change in the Tin Plate situation. Prices are firmly held, but dealers buy sparingly, and orders are confined to small quantities for quick delivery.

There is rather more activity in some branches of the Steel trade.

Scotch Pig Iron.—No change in character of demand for makers' brands and prices remain as before:

No. 1 Coltness,	f.o.b.	Glasgow	53/6
No. 1 Summerlee,	"	"	52/
No. 1 Gartsherrie,	"	"	50/6
No. 1 Langloan,	"	"	50/6
No. 1 Carnbroe,	"	"	44/
No. 1 Shotts	"	at Leith	51/
No. 1 Glengarnock,	"	Ardrossan	50/
No. 1 Dalmellington,	"	"	47/6
No. 1 Eglinton,	"	"	46/6

Steamer freights, Glasgow to New York, 1/; Liverpool to New York, 7/6.

Cleveland Pig.—Business moderate, but, owing to light supplies, makers very firm at 42/6 for No. 3 Middlesborough, f.o.b.

Bessemer Pig.—Dealings have been light and the market is weaker at 50/ for West Coast brands, Nos. 1, 2 and 3, f.o.b. shipping port.

Spiegeleisen.—Very quiet market and no change in sellers' price. English 20 % quoted at 77/6, f.o.b. shipping port.

Steel Rails.—Slightly more inquiry, but only moderate sales thus far. Heavy sections quoted at £4. 2/6, f.o.b. shipping port.

Steel Billets.—The market remains quiet and without change. Bessemer, 2½ x 2½ inches, quoted at £4. 5/, f.o.b. shipping point.

Steel Blooms.—Sales light and prices unchanged. Makers quote £4 for 7 x 7, f.o.b. shipping point.

Steel Slabs.—Dull market and no change in prices. Bessemer quoted at £4. 5/, f.o.b. at shipping point.

Old Iron Rails.—Business moderate and the demand slow. Tees quoted at £2. 17/6 and Double Heads at £3, f.o.b.

Scrap Iron.—No change in this line. Demand continues light. Heavy Wrought Iron quoted at £2. 10/ @ £2. 12/6, f.o.b.

Crop Ends.—Very little doing and prices as before. Bessemer quoted at £2. 12/6 @ £2. 15/, f.o.b.

Manufactured Iron.—Demand throughout continues slow and the market is without special change. We quote, f.o.b. Liverpool:

	£	s.	d.		£	s.	d.
Staff. Ordinary Marked Bars	8	10	0	@		...	
" Common "	6	5	0	@	6	7	6
Staff. Bl'k Sheet, singles	7	5	0	@		.....	
Welsh Bars (f.o.b. Wales)	5	10	0	@		.....	

Tin Plate.—Prices the same as last week and demand quiet. We quote, f.o.b. Liverpool:

IC Charcoal, Alloway grade	14/6 @ 15/
IC Bessemer Steel, Coke finish	12/6 @ 12/9
IC Siemens " " "	12/9 @ 13/
IC Coke, B. V. grade 14 x 20	12/6 @ ....
Charcoal Terne, Dean grade	12/ @ 12/3

Pig Tin.—Market closed soft at £99 15/ @ £100 for spot, and £98. 15/ for three months' futures.

Copper.—Market barely steady at the close. Merchant Bars quoted at £44. 17/6, spot, and £45. 5/, three months' futures. Best selected, £49. 10/.

Lead.—Demand moderate and the market barely steady at £10. 7/6 for Soft Spanish.

Spelter.—Market quiet, but rather steadier at £21. 15/ for ordinary Silesian.

HARDWARE.

Condition of Trade.

BUSINESS generally is referred to as of diminished volume, many of the travelers being at home, and merchants naturally disposed to purchase moderately at the end of the month and half year. There is, however, a fair trade doing in a small way and many assorted orders are reported. Seasonable goods are still moving, the trade in these lines having been exceptionally good. Prices on the whole are unchanged and the tone of the market is without special modification, although in one or two exceptional lines there is a slight improvement perceptible. Collections continue fair.

Chicago.

(By Telegraph.)

The Hardware trade is remarkably good here, considering the circumstances. The rainy season in the Northwest is not over, although an occasional day of sunshine is vouchsafed the suffering people. Whenever the rain stops orders pick up at once. The demand then experienced covers all kinds of goods, but in seasonable articles, such as Screen Doors, Window Screens, Wire Cloth and Refrigerators, the volume of business has been extraordinarily large. Jobbers, even with greater stocks than usual, have been unable to meet the calls on them, and in spite of urgent appeals to the factories are still behind in filling orders. Ice Cream Freezers have literally sold by the thousand. The supply of Wire Cloth is particularly short. The very wet weather is not regarded as a calamity of wide effect if it does not last too long. In some sections crops have been washed out by the floods, but a hundred have been benefited by the rains to one which has suffered. A little fair weather now will insure immense crops in places which have been almost barren on account of lack of moisture. Building operations have been interfered with to a great extent, yet Builders' Hardware is being ordered remarkably well. The demand for Heavy Hardware keeps up to its record for the month. Wagon stock continues scarce and dear. Collections are reported very fair in all branches of the hardware trade.

St. Louis.

(By Telegraph.)

The improvement which has been prevalent for some weeks past continues, notwithstanding the extreme warm weather which prevailed the better part of last week. The retail trade is keeping up remarkably well, and seasonable goods, of course, are largely called for. There is at present a large amount of building being done in and around St. Louis, and Builders' Tools and Hardware are in strong demand. Prices are practically unchanged, with the exception of Barb Wire, which is a trifle lower, and Wire Nails, which are now selling at an advance of about 10 cents per keg over prices quoted one week since. Collections are excellent.

Notes on Prices.

Cut Nails.—The Cut Nail market both in the East and West remains in about the same condition as at our last report. No further shrinkage in prices is reported and quotations are on the same basis as heretofore. In the West $1.50 at mill on a 25-cent average fairly represents the market, though both lower and higher prices are sometimes named. The Eastern mills are still selling under their understanding, and $1 55 at mill for Steel Nails on 30-cent average, with equalization of freight, is still the general quotation. Iron Nails are 3 cents a keg less. On carload lots a discount of 5 cents per keg is made.

Chicago, by Telegraph.—Makers of Steel Cut Nails are receiving larger specifications than for some time, indicating that jobbers' stocks are running low. If some of the idle factories do not soon start up a shortage of Cut Nails in this market seems imminent. Makers' stocks are not large enough to stand the constant drains, and some sizes are now very scarce. They quote for factory shipment $1.57½, Chicago, on 30-cent average Jobbers' prices are irregular, depending upon the character of the Hardware order of which they form a part, or else upon the assortment of sizes. The usual price from stock is $1.70 base, subject to the above qualifications.

Wire Nails.—A slightly improved condition is found in the Wire-Nail market, but prices are somewhat uneven. One or two of the mills are holding to $1.60 at mill, refusing to meet lower quotations. Other manufacturers refuse to quote a lower figure than $1.55, having withdrawn former quotations and evincing a determination to get a better price for their goods. It does not, however, appear that the quotation of $1.50 has been withdrawn by all the manufacturers, and while the market as a whole is certainly firmer, it is possible that this figure can still be obtained on large and desirable orders. Small lots from store in New York are held at $1.85.

Chicago, by Telegraph.—Jobbers are endeavoring to advance the price of Wire Nails from stock, but are not acting in concert. A leading house now quotes $1.70, but other sellers have not quite come up to this figure. The present good demand and a little firmness on the part of sellers should, however, help the situation, which cannot be agreeable to the trade in general. Manufacturers are now quoting $1.60 to $1.70, Chicago, and it would seem to be short-sighted policy to sell from stock at the same price.

Barb Wire.—The demand for Barb Wire in the East is referred to as moderate, and manufacturers are in a position to accept orders. While $2.65 for Four-Point Galvanized at mill fairly represents the market, this figure is slightly shaded, and the market is not characterized by quite so strong a tone. Small lots from store in New York are held as before.

Chicago, by Telegraph.—Barb Wire manufacturers maintain a firm front, some of them not yet having caught up with their back orders. We quote $2.35 for Painted and $2 80 for Galvanized for early delivery. Jobbers report a light trade from the Northwest, but continue to quote small lots at $2.50 for Painted, and $3.00 for Galvanized.

Loaded Shells.—The Union Metallic Cartridge Company, Bridgeport, Conn., and 313 and 315 Broadway, New York, are about to issue, under date July 1, a revised price-list of their Loaded Shells, which supersedes all previous lists. Prices are unchanged, except for Shells loaded with Nitro Powders. In the circular which accompanies the list the company state that hereafter they will load New Club Shells with Black Powder only and Smokeless Shells and Trap Shells with Nitro or Black Powder. They refer to the fact that the great demand for these goods renders it necessary to establish and strictly adhere to fixed principles of loading, and to make no variation that will in their judgment reflect in any way upon the quality of the goods. To this end they state that they must determine the proper size and kind of Wadding, the kind of Shells best adapted to Nitro Powders and the quantity of such Powders; also the quantity and size of grain of Black Powder best adapted to the various loads. Their new Smokeless and Trap Shells are primed with U. M. C. No. 3 Primers, and are intended to overcome the objections to cheap Shells when loaded with Nitro Powders. They guarantee that these new Loaded Shells will give quick ignition and complete combustion of the Nitro Powder charges. They call attention to the fact that Nitro Powders are not correctly measured by drams or bulk measure, and they will therefore hereafter label Nitro Loaded Shells in grains, and suggest that the trade adopt this change in their prices. The comparative table of Nitro Powders in drams (bulk measure) and in grains is given below. It is stated that special loads A, B and C (Black Powder) are formulated with great care and uniformity, to give high velocity, close and uniform pattern and great penetration, the essential points for a perfect trap load. The quality of the Powder is referred to, as well as the system of wadding. The list is given below and is subject to a dis-

count of 40 and 10 and 10 per cent., with an additional 2 per cent. for cash:

U. M. C. Loaded Shells, Black Powder.

New Club.—12 Gauge.

Load No.	Adapted to shooting.	Weight of Powder.	Weight of Shot.	Size of Shot.	Price per 1000.
		drs.	oz.

587	Ruffed grouse	2¾	1	7	26.00
616	Ruffed grouse and teal	3	1	6	26.50

20 Gauge, same prices as for 16 Gauge.

Special Loads.

New Club, 12 Gauge, Extra Quality Black Powder.

Load No.	Weight of Powder. Drams.	Weight of Shot. Ounces.	Size of Shot.	Price per 1,000.
A	3	1⅛	8	$26.00
B	3	1¼	8	27.00
C	3¼	1¼	8	27 50

These Special Loads will be supplied with 6 and 7 Shot when desired, but no other variation.

U. M. C. Loaded Shells, Nitro Powder.

Smokeless Shells.—Schultze, S. S., E. C. or Am. Wood.

			Price per 1000.
	12 Gauge.		
Load No. 1—	2¼ drms. (measure)	1⅛ oz.	$47.00
" 2—	2⅜ " "	1⅛ "	47 50
" 3—	2¾ " "	1¼ "	48.50
" 4—	3 " "	1⅛ "	48 00
" 5—	3 " "	1¼ "	49.00
" 6—	3¼ " "	1¼ "	49.50
	10 Gauge.		
" 7—	3¼ drms. (measure)	1⅛ oz.	56.00
" 8—	3¼ " "	1¼ "	57.00
" 9—	3½ " "	1¼ "	57.50
" 0—	3⅝ " "	1¼ "	58.00

It is stated that experience shows that the best results with Nitro Powders in Smokeless Shells are obtained with the above loads; therefore these Shells will not be loaded in any other manner. Above loads are equally well adapted to Trap Shells (metal reinforced). Heavier charges will be loaded to order in Trap Shells only.

	Per 1000.
Extra for Trap Shells, more than Smokeless	$8.00
Extra for each ¼ drm. (measure) Nitro Powder	.50

The following comparative table of Nitro Powders is given:

Drs.	Schultze. Grs.	"S. S." Grs.	"E. C." Grs.
2¼ (measure) Black Powder equal	35	34	36
2⅜ (measure) Black Powder equal	38	36	40
3 (measure) Black Powder equal	42	38	44
3¼ (measure) Black Powder equal	45	40	47
3⅓ (measure) Black Powder equal	48	43	50
3⅜ (measure) Black Powder equal	51	46	53

1 pound equals 256 drams equals 7000 grains.

The following basis for list prices is furnished, by which the list for any load may be computed:

	Per 1000.
12 gauge, 3 drams, 1 ounce Shot, Black Powder	$25.00
10 gauge, 3¾ drams, 1 ounce Shot, Black Powder	27.00
16 gauge, 2¾ drams, ⅞ ounce Shot, Black Powder	25.00
20 gauge, 2¾ drams, ⅞ ounce Shot, Black Powder	25.00
For each ¼ dram of Powder, add or deduct	.50
For each ⅛ ounce of Shot, add or deduct	1.00
Chilled or Buck Shot	1.00
Pink-Edge Wads, 12, 16 and 20 gauge	1.10
" " 10 gauge	1.60
Ducking Powder, more than regular Black	8.00
For Smokeless Shells, more than New Club, 12 gauge	7.00
For Smokeless Shells, more than New Club, 10 gauge	8 50
For Trap Shells, more than New Club, 12 gauge	15.00
For Trap Shells, more than New Club, 10 gauge	16.50

It is recommended that excessive charges of Nitro Powders be not used. The best results, it is stated, will be obtained with:

2¾ to 3 drams (measure) for 12 gauge.
3¼ " 3¾ " " " 10 "

Shot.—Under date June 23 the Associated Shot Manufacturers announce another advance. The prices for small lots are now as follows, terms net cash, 30 days, or 2 per cent. discount for cash in 10 days:

Drop Shot, sizes smaller than B, per 25-pound bag	$1.45
Drop Shot, sizes smaller than B, per 5-pound bag	.35
Drop Shot, B and larger sizes, per 25-pound bag	1.70
Drop Shot, B and larger sizes, per 5-pound bag	.40
Buck and Chilled Shot, per 25-pound bag	1.70
" " " " 5 " "	.40
Dust Shot, per 25-pound bag	2.00
" " " 5 " "	.45

In lots of 2000 pounds and upward taken at one time, a discount of 20 cents per 100 pounds will be allowed. Freight is equalized with any Shot manufacturing point.

Strap and T Hinges.—Some irregularity continues, as for some time past, to characterize the Strap and T Hinge market, and it is understood that some of the manufacturers are accepting orders at lower figures than are permitted by their agreement. The matter will undoubtedly receive attention at their meeting tomorrow.

Cordage.—No change has for some time been made in the announced prices of Cordage, and the market on the whole is fairly regular. Manilla and Sisal Rope can, however, be purchased at cut prices from some of the representatives of the National Cordage Company, as well as from outside parties. Thus Manilla Rope, which is sold regularly at 11¼ cents base, can be purchased at 10¾ cents base, while Sisal Rope can be obtained in round lots at 1 cent less than regular price.

Glass.—There is little activity in the Glass market, as the demand is light. Prices remain unchanged, and are fairly well maintained, as orders are not large or numerous enough to encourage the cutting of prices to secure additional business. Factories have been going out of blast for the past week, the total capacity reported as having shut down to June 25 being 142 pots. The rest of the factories will probably have closed for the summer by July 1. Reports indicate that there is a prospect of a shortage of American Glass for the summer months, as stocks are low at the factories. French Glass is in fair demand, and prices are reported as being firm. Quoted prices on Glass are as follows: American Window Glass, 1000-box lots or more, 80, 10 and 5 per cent. discount; carloads, 80 and 10 per cent. discount; less than carloads, 80 and 5 per cent. discount; French Window Glass, 80 and 5 per cent. discount; American Plate is held at a discount of 50, 10 and 5 per cent., and imported Plate at a discount of 60 per cent.

Anti-Rust.

THE INQUIRY of a correspondent in our issue of June 23 for a preparation to prevent polished steel from rusting has called out a number of replies. Wilcox, Crittenden & Co., Middletown, Conn., manufacturers of Marine Hardware and Ship Chandlery, advise us that for several years they have been using an article called "Non-corrodent," furnished by Chas. E. Wheelock, Milbury, Mass., which they state is the best thing they have found to prevent rust on polished iron or steel goods.

A Western manufacturer has found a transparent varnish effective in preventing rust on bright goods. The directions for preparing it are given as follows:

In a 5-quart pail is suspended a tin vessel with a brass strainer cloth bottom, the inner vessel being smaller at the bottom than at the top. The strainer bottom

should not quite touch the bottom of the pail. In the inner vessel put 15 ounces of rosin, on which pour 1 gallon of 63° benzine, and cover over to prevent evaporation. This should stand over night, or until the rosin is dissolved. One-fourth ounce of sugar of lead and ¼ ounce of verized alum are put in enough water to dissolve them, and are stirred into the benzine after the rosin is dissolved. Time is then allowed for all to settle, and all but the settlings are poured off, then the varnish is ready for use. The addition of pulverized plumbago makes, it is stated, a splendid stove polish.

Another correspondent advises the use of lime as an absorbent of moisture to prevent rust. He suggests that a small lump of lime be put in an uncovered box, and placed in the case with the polished steel goods. When the lime becomes air slacked, which, he states will take at least six months, it should be replaced by new lime. If the goods are handled they should be wiped off before being replaced in the case. We should be pleased to have further information from our readers on this subject.

Louisville.

(From a Special Correspondent.)

THE HARDWARE trade of Louisville, Ky., while of a very satisfactory volume for the time of year, is not doing a rushing business. Nearly all houses are in the midst of stock taking. If it were not for such extreme close profits ruling, a good balance would show on most books, as a large amount of goods have been handled during the last six months.

The heavy sales of Pig Iron during the past week would, under ordinary circumstances, indicate a general improvement in prices, but the fact that they were made by the furnaces coming down to buyers' views, shows only that low prices will rule for another season. No dealer or consumer will ever complain of low prices if lower ones are not threatened as a consequence.

A very good seasonable demand has been exhibited for Bar and Sheet Iron, Cut and Wire Nails. Shelf Hardware is going out well, and Heavy Hardware is always on the move from this city.

House-Furnishing Goods, especially those tending to alleviate man's discomfort in hot weather, are in great demand. There never was so much Fly-Screen Wire put up as this year. Genuine hot summer weather is accountable for this growing business, coupled with the fact that reduced prices have placed all such luxuries in the reach of all.

The near approach of July 1 has caused the withdrawal of a great many prices on staple lines from the mills. Already dealers are ready to pay 5 cents per 100 pounds advance on some articles—Wire Nails for one—but the mills hold strong at 10 cents advance over extreme prices. There has been nothing to cause prices to advance, but curtailment may cause a scarcity and make it difficult to get orders filled on time.

Harvesting machinery is still crowding the shippers. This has been a good year for them, and a fine crop is now being gathered of wheat, although it is too early to say how it will turn out. Another great staple crop of Kentucky and Tennessee, tobacco, has had a fine start and promises well.

General business prospects are good, but nothing exciting is expected. All are well satisfied with the end of the half year, especially the Hardwaremen.

Combined Steel Goods and Glass Rack.

A CHEAP AND CONVENIENT RACK for Steel goods and Glass is shown in the accompanying illustration, Fig. 726. The lower part, which is used for Glass, is 3 feet 10 inches high, and the entire hight of the Steel goods rack from the top of the table is 4½ feet. The two cross bars form convenient resting-places for short and long-handled goods. The pegs separating the handles are of ⅜ round iron, and are designed to prevent the tools from falling sideways. The table is 3 x 12 feet in size, the top being made of 2-inch material. Under the table the

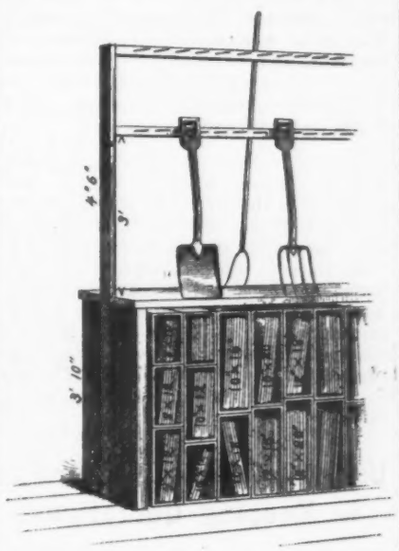

Fig. 726.—Combined Steel Goods and Glass Rack.

arrangement of the smaller sizes of Glass is shown. The combined rack can be modified in size to suit individual requirements.

Sporting and Athletic Goods.

THE INCREASED ATTENTION given to Sporting Goods is forcibly illustrated by the handsome catalogues which are published by the wholesale houses in this line. These catalogues are in many cases not mere price-lists, with the illustrations of the articles offered for sale, but are truly works of art, in which enticing pictures of camp, marsh, rapids, mountain and prairie send a thrill of enjoyment through the sportsman.

There is a marked increase in the number of Hardwaremen who are making more of a specialty of Sporting and Athletic Goods each year, and are finding this a profitable department of their business. There is no reason why this line of trade should not be monopolized by the Hardwaremen, instead of letting it drift into the book and news stores and the toy stores.

It will be noticed that *The Iron Age* has devoted considerable attention to the late productions of Bicycles, Fishing Tackle, Guns, &c., and has awakened considerable interest in the subject of the display of Sporting Goods. We have in preparation additional matter bearing upon this subject, and shall value any suggestions from the trade in regard to it.

Trade Items.

IN OUR LAST ISSUE in the description given of the Broom Holder recently put on the market by Slaymaker, Barry & Co., Lancaster, Pa., we referred to Surpless, Dunn & Alder as their agents. This was, however, incorrect, John H. Graham & Co., 113 Chambers street, New York, being the general agents for the sale of all of their goods.

R. H. DANA COMPANY have removed from 25 Beaver street, New York, to more commodious offices in the Kemble Building, 15 to 25 Whitehall street. The company have increased their capital stock to $75.000, and we are advised that they are intending to send travelers abroad before long. Their advertisement will be observed on another page.

JOHN T. HENRY & SON, Hamden, Conn., have organized into a joint stock company under the statute laws of the State of Connecticut. The style of the firm is now the J. T. Henry Mfg. Company, of which John T. Henry is president. Owing to their increasing business the company have commenced the erection of a new brick building which, when completed, will, we are advised, more than double the size and capacity of their plant. The company will continue the manufacture of a full line of Pruning Implements and Garden Tools. They have also added a special department for the production of Wire and Sheet Metal Novelties, and are prepared to furnish estimates on tools and sample lots.

JARVIS CALL has purchased and is carrying on the Hardware business of Albert A Duer at 522 South Second street, Philadelphia.

COLUMBIA GREY IRON COMPANY, Columbia, Pa., manufacturers of Toys, Novelties, Builders' Hardware and Small Castings, have appointed O. N. Stein as their Eastern agent, with office at 64 Federal street, Boston. The Columbia Grey Iron Company were incorporated August 19, 1891, with a capital stock of $50,000. They announce that they have built an entirely new plant, fully equipped with improved modern machinery and appliances. H. S. Stauffer is general manager and Wm. M. Spera superintendent of the company.

J. C. MCCARTY & Co., 97 Chambers street, New York, issue a card in which they call attention to the fact that they are agents for the Peters Cartridge Company, Cincinnati, Ohio, a complete assortment of whose Loaded Shells is carried in stock. They remind the trade that the capacity of the company's factory has recently been doubled, so that they are now in a position to execute orders, large or small, with reasonable dispatch.

S. M. SMITH has purchased the interest of his partner. J. G. Carnahan, in the Hardware business at Washington, Ind. He will continue the business at the old stand, 124 Main street.

ST. JOSEPH PUMP COMPANY, St. Joseph, Mo., advise us that their Perfection Water Elevator and Purifying Pump is meeting with increasing favor at the hands of the trade, the company being sometimes compelled to decline orders for their cheaper grade of Pumps that they may take care of those for the Perfection. This popularity is attributed to the company's endeavors to improve and strengthen the Pump. They have just completed a machine at a cost of over $1000 which is designed to make the wire links comprising the chain of this Pump. This machine, we are advised, turns

off a complete link every two seconds, or 30 per minute and 1800 per hour, so that running ten hours per day 18,000 links are thus turned off, equal to 12,000 feet of chain or buckets. Packing 40 feet of chain with each Pump, which is sufficient for a 17½ foot well or cistern, they have chain enough to equip 300 Pumps per day of ten hours. The proportions to which their business has thus grown will be better understood when their capacity five years ago, at which time the manufacture of the pump was commenced, was but 10 to 15 complete Pumps per day. It is stated that the trade on this Pump comes from all parts of the United States, there being also several good foreign customers on the company's books.

On June 15 the Chicago office of the Kilmer Mfg. Company, Newburg, N. Y., was removed to rooms 609 and 610 of the Bort Building, 21 Quincy street, immediately east of the post office and about one-half block west of State street. For some time past the company have felt the necessity of having an office more centrally located in the business portion of the city, and the location above is referred to as a very convenient one, being easily reached from the various railroads. The storehouse of the company will still be located at 543 and 545 State street, and the removal of the office will provide more room and greater facilities for carrying a complete stock of Bale Ties, Barb Wire and Coil Wire.

The National Wringer & Mfg. Company, Canton, Ohio, advise us that they have purchased all patents, machinery, patterns, &c., formerly the property of the Erie Wringer Company of Erie, Pa., and the Erie Wringer Mfg. Company of Pittsburgh, Pa. Owing to the increasing demand for these goods the company are now putting up an extensive plant, into which they expect to move about August 15. For the convenience of the trade the campany have established branch offices at 53 River street, Chicago, and 202 Market and 3 Pine streets, San Francisco, where large stocks of these goods will be carried for immediate delivery. The company are manufacturing the Erie, King, Daisy, "77," Prime, Diamond, Columbia and Pittsburgh brands of Wringers, and refer to the strength, cleanliness, durability, &c., of the iron frame Wringer. John H. Werner is president of the company, Joseph Schott secretary and treasurer and James M. McNeill general manager.

The Peters Cartridge Company, Cincinnati Ohio, advertise their Shotgun Cartridges by cards about 2 x 5 inches in size, following the outlines of a loaded Cartridge, cut away so as to show the manner in which they are loaded. The Cartridge is printed in colors, and makes an attractive medium with which to interest consumers. On the other side are printed the names of the merchants handling the goods and testimonials.

E. F. Hays, dealer in Oil-Well Supplies, Hardware and House-Furnishing Goods, &c., Chicora, Pa., was burned out on the 20th inst. Mr. Hays advises us that he will rebuild immediately.

Some time since we announced that a contract had been executed by which the products and business of the Branford Lock Works, Branford, Conn., will after July 1 be controlled and handled by the Yale & Towne Mfg. Company, Stamford, Conn. Formal announcement of the carrying into effect of this arrangement is made in our advertising columns of this week, from which it will be observed that hereafter full lines of Branford goods will be carried in stock at the branch houses of the Yale & Towne Mfg. Company in New York, Chicago, Philadelphia and Boston. Orders of the larger kinds will be filled directly from the Branford works, especial care being given to correct and prompt deliveries. Smaller assorted orders will be filled from the branch houses.

The Wire Fabric Company, Homer, N. Y., manufacturers of Wire Cloth and other Wire and Hardware specialties, call particular attention to their Elastic Enameled Evaporator Cloth, which, it is claimed, contains no zinc or other poisonous matter, is acid proof and is not affected by high temperatures. This is made in 2, 4, 5 and 8 mesh, and is adapted to all the different uses to which the galvanized goods are usually put.

The Upson & Hart Company, Unionville, Conn., have added to their business the manufacture of Solid Nickel Silver Goods under a new process which, we are advised, was invented by H. C. Hart, secretary and superintendent of the company. The great economy of this process is referred to, and we are advised that the process will be leased to other manufacturers. The advertisement of the company will be found on another page.

American Stamping Company, successors to Joseph Scheider & Co., with factories at Brooklyn, E. D., N. Y., and Portland, Conn., refer in their advertisement on another page to the fact that they have recently opened sample and sales rooms at 104 and 106 John street, New York. They also mention that they are manufacturers of Plain and Retinned Stamped Tinware, Tinners' Trimmings, plain and heavy; Polished Pieced Tinware, Japanned and Galvanized Ware, Cuspidors, &c.

Use of a Cabinet Letter File in Keeping Quotations.

A SUCCESSFUL SYSTEM, one that works smoothly and accurately, is usually built up with the business. Day by day, as experience demonstrates, the necessary parts are added, simplified or perhaps modified. To take a particular system outright and introduce it into an established business is like buying a ready-made coat. It may fit nicely and wear splendidly. It usually does, but then again it may be a bad botch and cause disappointment. What will work evenly and satisfactorily under one man's guiding hand will be a source of annoyance and friction under another. It is with this view that in taking up this fraction of a system of keeping prices no particular way is especially recommended over another, the sole object being to strengthen that which is already in use.

You are an economizer of time and your system is quite simple, you merely mark the inside price of discount in the catalogue or price-list. It is a good plan, but are you sufficiently careful to have the particular one you want always on hand? If not, would it not be practicable to procure a cabinet with, say, 12 drawers, each drawer marked on the outside "A B," "C D," "E F," &c., and each having an index, in which to put circulars, letters and memoranda; the catalogues to be merely put in the drawer on top of index according to the alphabetical letters to which they belong. You, of course, use a cost price, which is different from your selling mark, and also unlike what any of your competitors or fellow buyers have. If not, you should. It will also be advisable to make your memoranda on the catalogues, &c., what you bought, when you bought, how the goods sold, what you sold the goods at, what your competitors sold them at, &c.

The Cabinet Letter File has greater possibilities than any other labor-saving office appliance. Its adaptability is simply wonderful, and we will therefore stay by it a little longer. This file may have any desired number of drawers from one upward. Our buyer prides himself on his judgment, his knowledge of goods, his ability to foresee the market. He rather resents the idea of running a book of any kind. He claims to be a buyer, not an office man. Then, indeed, is this little scheme dear to his heart. On his desk lies a memorandum block; it is, say, six inches square in size, and while of good weight is not a paper of perfect finish. In steps Mr. Smith, representing Jones, Brown & Co., manufacturers of Tea Kettles, and relates his little tale. Our buyer reaches for the memorandum block, pulls out his pencil and writes:

Tea Kettles.

No. 1, Copper.....5 in. Nth doz.
" 1, " .....6 " Nte "
" 1, " .....7 " Neh "
" 2, Tin Cop. Bottom.....5 " Eth "
" 2, " " .....6 " Ete "
" 2, " " .....7 " Eeh "

In gross lots five per cent. trade, 2-10 net 60 days. Delivered in Chicago. Jones, Brown & Co, Cincinnati, June 25, 1891. This memorandum he puts on a spindle, in a clip or in a drawer until the stock or office boy has time to index it. The index in the cabinet is as follows:

Taa to Tax.
Tay to Taz.
Te.
Tha to Thi.

The memorandum in due course is put in the file under the subject, which is "Tea Kettles." It is consequently placed in the apartment "T," where it is always possible to get it without a moment's delay. This method is simple, reliable and quick.

The plan just explained is modern, and for a change we will go backward. As a letter is received giving quotations it is entered in a book under the heading of "Firms," as follows: No. 1. Brown, Smith & Co., Tea Kettles. It is folded over from each side so as to be but the width of a postal card, and on the upper end of the back the number in the book is written. It is then again entered in the same book, but in another part, under the heading of "Subject," the same number being used. Where the quotations are given verbally a memorandum is made as explained in the previous described plan, and then handled in the same manner as just mentioned above. These letters are then tied with a string, or held with a rubber band, and are, of course, kept in rotation according to number. The indexing in the book by subjects should be alphabetically. If this is done then it is possible to dispense with the headings "Firms." C. R.

Lamps.

CRAIGHEAD & KINTZ COMPANY, 33 Barclay street, New York, advise us that they have heretofore furnished their Daylight Lamps exclusively with the ratchet wick-raising device, and still consider this form of wick raiser in every way superior to any other device, as the hight of the flame can be more readily and accurately regulated by means of this appliance. However, a large share of the public have been educated to ask for the pull-bar wick-raising device, and they have perfected a superior system of this style of wick raiser, and can now offer customers a choice. They also supply their Lamps with an indicator showing when the Lamp is full of oil. The indicator is of glass, which is referred to as having advantages over a cork float.

It Is Reported—

That Geary & McCarthy have opened a new Hardware store at Havana, Ill.

That Grant & Hobson, Hardware merchants, Aurora, Ill., are out of business.

That Doolittle Bros. is the style of a new firm dealing in Hardware at Estherville, Ohio.

That E. S. Scoullar & Co., dealers in Hardware, Vancouver, B. C., have been succeeded by the Cunningham Hardware Company.

That Disosway & Churchill is the title of a firm which has recently commenced the Hardware business at New Berne, N. C. They will make a specialty of Machinists' and Mill Supplies The firm is composed of J. J. Disosway and B. L. Churchill. Messrs. Disosway and Churchill are young men and were formerly in the employ of J. C. Whitty & Co., Hardware merchants, of New Berne.

That in a conflagration at Chicora, Pa., on the 14th inst., the Hardware and furniture store of E. F. Hayes was destroyed. Loss, $15,000.

That C. A. Lee has commenced work on his new Hardware store at Sterling, Ohio.

That George H. Spang of the Hardware firm of Bressler & Spang, Lebanon, Pa., has retired from business, His place has been taken by S. S. Schnehl, who formerly conducted a Hardware store in the same city. The firm are now known as Bressler & Schnehl, and have a flourishing business at 760-762 Cumberland street, Lebanon, where they occupy a spacious store having excellent arrangements for storage and display of a full line of Hardware, Stoves, Trimming and Roofing Goods, &c.

That N. O. Ward and C. H. Smith have formed a partnership for the purpose of carrying on the business of retailing General Hardware and Farming Implements at Stanwood, Mich.

That Mr. Ferland has bought out the Hardware stock of the Port Gardner Hardware Company, Everett, Wash., and has opened a store in the Zindorff Building.

That J. C. Redgrave's Hardware store at Lyons, N. Y., was robbed on the 20th inst. About $60 worth of Revolvers, Ammunition and Cutlery was taken.

That John Nicholson, manager of the Bolivar branch of the Jarecki Oil Well Supply Company, has purchased the Hardware stock of George L. Tucker at Belmont, N. Y., and will take possession July 1.

That Howard & Smith, Hardware dealers, Wyalusing, Pa., are building a large addition to their store.

That J. L. & F. L. Brender are erecting a Hardware store at Eudora, Kan.

That G. L. Davis & Son, Falconer, N. Y., have rented their building to a company who will put in a large stock of Hardware.

That G. L. Peirce has sold his Hardware store at Miller, Neb., to Mr. Morey.

That George Hewitt of Michigan has opened a Hardware store at Knowlesville, N. Y.

That William Hall, dealer in Hardware and Furniture, Moville, Iowa, was burned out recently. Loss, $8000; insurance, $3000.

That A. L. Goodrich of Oneonta, N. Y., has purchased a Hardware store in Worcester.

That R. J. Humphrey & Co. have purchased the stock of Hardware, Stoves, Cutlery, &c., of W. Z. Evans, Delaware, Ohio.

That the Albany Hardware Company, Albany, N. Y., have filed a certificate of full payment of capital stock with the Secretary of State. The capital is $25,000, and the directors are Charles H. Turner, Peter Kinnear, Seth Wheeler, J. H. Dunscomb and J. Townsend Lansing.

That J. W. Hamrich, Danville, Ind., has disposed of his Hardware store to W. F. Sandy who will continue the business as formerly.

That Charles Fish, Agricultural Implement dealer at Sauk Center, Minn., has been succeeded by a new firm, the style of which is Townsend & Fish.

That J. B. Heck has just opened a Hardware store at Petersburg, Neb.

That Wood & Atwood's Hardware establishment at Flint, Mich., was entered by burglars on the 10th inst., and some cutlery stolen.

That Frank Miller has, with Floyd Rice, opened a Hardware store at Elkland, Pa.

That the Hardware stores of Evans & Kelly and Smith Bros., Savannah, N. Y., were burglarized on the 9th inst.

That Hawkins & Son, Hardware merchants at Chico, Cal., have dissolved partnership. A new firm has been organized under the style of Hawkins & Eliot, who will continue the business.

That George Armstrong will continue the business formerly conducted by George Armstrong & Co., San Francisco, Cal., under the same style of firm name.

That Persons & Myers have commenced the Hardware business at Harvey, Ill.

That Sanquist Bros. are a new Implement firm at Orion, Ill.

Price-Lists, Circulars, &c.

OSWEGO INDURATED FIBER COMPANY, Oswego N. Y.: Illustrated catalogue C, Indurated Fiber Bath Tubs, Foot Tubs, Seat Tubs, Lavatories, Laundry Trays, Pantry Sinks, Child's Baths, Cisterns, Seats, Pipe Boards, Tiling and Wainscoting. The manufacturers claim that their Indurated Fiber Ware combines beauty, cleanliness, durability, lightness, easy of care, economy in the use of hot water, compliance with the latest sanitary regulations and cheapness.

PATCH & SWIFT, Streator, Ill.: Architectural Iron Work, Store Fronts, Columns, Pilasters, Blacksmith Tools, Lawn Vases, &c. Illustrations of various designs in the line are given in their catalogue, also a catalogue of Stove Repairs covering 85 pages.

THE VANDERGRIFT MFG. COMPANY, Jamestown, N. Y.: New Improved Western Washer, Improved Pan-American Washer, Self-Weighing Shot Case and American Hand Seed Planters. We are advised that a patent was recently granted on both the Washers on the manner of placing the gearing or operating parts inside the machine for shipping. This mode of packing is referred to as obviating any danger of the castings getting broken in transit.

E. BEMENT & SONS, Lansing, Mich.: Farm and Garden Implements, Stoves, &c. These various lines of goods are shown in great variety, with descriptions, price-lists, &c. They also present a view of their plant.

NOVELTY WIRE & IRON WORKS, H. R. Vaneps, Peoria, Ill.: Wrought-Iron Fence, Window Flower Garden, Flower Baskets, Flower Stands, Trellis, Barrel and Basket Covers, Counter, Desk and Window Guards, &c.

MINNESOTA THRESHER MFG. COMPANY, Stillwater, Minn.: Threshing Machinery. Attention is directed to their Separator, Engine, Horse Power, Self Feeder, Automatic Stacker, Automatic Wagon Loader, Automatic Bagger and Portable Sawmill.

JACOB J. VOLLRATH MFG. COMPANY, Sheboygan, Wis.: Enameled Iron Ware. A line of Hollow Ware is shown in colors, in which the finish varies, some being white inside and colored outside, while others are gray enamel inside and outside. The manufacturers refer to the "Vollrath Ware" as fine, large and complete.

DEERE & CO., Moline, Ill.: Plows, Cultivators, Harrows, &c. A catalogue of 150 pages is devoted to this line of goods, which is fully illustrated and described.

BERGER BROS., Philadelphia, Pa.: Tinners' Hardware, Fine Malleable and Gray Iron Castings and Roofers' Supplies. They call attention to their Handy Barrel Truck, Eave Trough Hangers, Malleable Pipe Straps, Pail Ears aand Saucepan Handles. A discount sheet accompanies their catalogue.

THE NORTHWESTERN HORSE NAIL MFG. COMPANY, Chicago, Ill.: Horse Nails. These are made with regular, Goodenough and city heads; also Plate Nails. They have recently introduced two new styles of Nails known as Kent Special Plate Nails, for Covington and Kent Racing Plates, and Countersink Heads for stamped shoes.

GOWANDA AGRICULTURAL WORKS, Gowanda, N. Y.: Gowanda Steel Plows. These are referred to as being light of draft, easy to handle, turning a good furrow and as hanging well. They are furnished with Cutter Points for stubble or stony ground, and have solid steel collar or jointer, as preferred.

H. H. PERKINS MFG. COMPANY, Kewanee, Ill.: Perkins' Boss Huskers. These are shown in Styles A, B, E, O, P, Q and R. The manufacturers state that in making Huskers only the best materiels are used. Styles A, B and E are forged from polished steel and nickel plated. The Leather used is selected yellow calf; the boxes in which the Huskers are packed are referred to as first class and in keeping with the goods.

BOSTON WOVEN HOSE AND RUBBER COMPANY, Boston, Chicago, and San Francisco: Cross-Stitch-Sewed Belt without seam. This is a Rubber Belt, on one side of which the threads run longitudinally, while on the other side they are tied together by threads running transversely. Thus it is claimed the Belt is tied together thoroughly in all directions.

SYRACUSE TWIST DRILL COMPANY, Syracuse, N. Y.: Twist Drill Bits for both metal and wood, Clark's Double-Cut Countersinks and Sweet's Measuring Machines. It is stated that while this machine is superior for making and testing standards, its greatest benefit is found by putting it to daily and continuous use. The machine has been recently improved in the form of the screw, which is now thoroughly protected from dust, and by a new form of friction nut. The machines are in use by a large number of manufacturers in different parts of the country.

THE WOLCOTT HARDWARE COMPANY, Hartford, Conn.: Wolcott's Sash Locks. Illustrations and price-lists are given of various styles and finishes of burglar-proof Sash Locks, which are manufactured, it is stated, under patents of which the whole and undivided interests are owned and controlled by the manufacturers. Particular attention is directed to the Monarch Sash Lock, which, it is claimed, will not mutilate or break the sash, and will draw the meeting rails closely together and securely lock the same.

BUNDY MFG. COMPANY, Binghamton, N. Y.: The Bundy Automatic Time Recorder. The object of the Recorder is to record in a permanent printed form the hour and minute at which persons arrive and depart in the morning, at meal times, or at any time of the day or night. It is recommended for use in factories, shops, stores, offices and in fact in every establishment where men's time is required to be noted.

NASON MFG. COMPANY, New York: Trade sheet of discounts, under date June 25, 1892, to apply to their new catalogue as revised October, 1891. They are sending out an indexed diary, which is never out of date, advertising their "10 to 1" Boilers.

OUR HARDWARE FOR HOT WEATHER: Rector & Wilhelmy Co., Omaha, Neb. A price current of Refrigerators, Lemon Squeezers, Ice Picks, Ice Tools, Oil and Alcohol Stoves, Gasoline Stove Furniture, Screen Doors and Windows, Spring Hinges, Oilers, Apple Parers, Freezers, &c. The arrangement of the front cover emphasizes the summer's heat.

THE NORWALK METAL SPINNING AND STAMPING COMPANY, Norwalk, Ohio: Superior Sheet Metal Stove Furniture. Illustrations are given of Copper Tea Kettles in various styles and sizes, polished and nickel plated; Wash Boilers, Tea or Coffee Urns, Cuspidors, Umbrella Stands, covered Sauce Pans, Wash Basins and Copper Measures.

HENION & HUBBELL, Chicago, Ill.: Special catalogue and price-list of Well Machinery, Well Tools and Well Supplies, including Wrought-Iron Pipe Fittings, Artesian Well Casing, Tubular Well Pipe, Pipe Tools, &c. Illustrations and price-lists of these goods are given.

A. LESCHEN & SONS ROPE COMPANY, St. Louis, Mo: List A, Wire Rope and Fittings of every description. Special attention is called to their Hercules Wire Rope, the wires of which, it is stated, are drawn from a patent steel especially for this brand of Rope, which makes a tough and strong Rope. The manufacturers claim that it is uniform in density, texture, strength and elasticity.

STAR HEEL PLATE COMPANY, Sacks & Richmond, proprietors, Newark, N. J.: Star Heel and Sole Plates, Star Jacks, Iron Stands, Combination Last, Lap Irons, Foot Rests, Awl Hafts, Malleable Iron Hob Nails, Crucible Cast-Steel Book Calk and Punches, &c.

THE PAYSON MFG. COMPANY, Chicago and New York: Pendulum Parlor Door Hanger, Double Truss Hangers Payson's Palace Double-Acting Spring Butts, Transom Lifters, Sash Locks, Casters, &c. A catalogue illustrates these goods with price-lists.

UTICA STEAM GAUGE COMPANY, Utica, N. Y.: Ordinary Gauges, Locomotive Gauges, Test Gauges Test Apparatus, Revolution Counters, Clocks, Hydraulic Gauges, &c. Their catalogue is an attractive one, well arranged, much care having been given to the cuts and typographical work of the book.

SHIMERSVILLE HARDWARE WORKS, Wm. Shimer, Son & Co., proprietors, Freemansburg, Pa.: Hardware and House Furnishing specialties and Iron Founders. Illustrations are given of Sad Irons, Scales, Brackets, Hat and Coat Hooks, Hammers, Hatchets, Boot Jacks, Match Safes, Toy Banks, Toy Pistols, Toy Trains, &c.

THE M. SEWARD & SON COMPANY, New Haven, Conn.: Carriage Hardware. The catalogue is devoted to price-lists and illustrations of Clips, Gear Irons, Dash Feet, Foot Rails, Shifting Rails, Joint Ends, Fifth Wheels, &c. Attention is called to their new plan of numbering their Clips. The new numbers correspond to the length of the flat part of the Clips, so that parties ordering by the flat part will not be obliged to refer to the catalogue to ascertain the number required.

STEEL EDGE STAMPING AND RETINNING COMPANY, Boston, Mass.: Stamped and Japanned Ware, House-Furnishing Goods and Wooden Ware. Illustrations are given of Steel Edge Dust Pans, Cuspidors, Japanned Goods, Deep, Plain and Retinned Stamped Ware, Wooden Ware, &c. They call attention to their line of Japanned and Painted Wares and specialties, and refer to the quality, finish and artistic decoration of the goods.

COLUMBUS BUGGY COMPANY, Columbus, Ohio: Buggies, Phaetons, Surries, Carriages, &c. They refer to their line of vehicles as handsome and complete, and to their style, finish and quality.

PETERS DASH COMPANY, Columbus, Ohio: Dashes, Fenders, Washers, Roll up Straps, &c. Illustrations and prices of these goods are given in their catalogue. They state that the stitching on these goods is close, about ten stitches to the inch, and the finish perfect.

THE SILVER MFG. COMPANY, Salem, Ohio: Ohio Ensilage and Feed Cutters and Carriers; also a treatise on silage and ensilage, with a plan of a 100 ton Silo. They also manufacture a line of Carriage and Wagon Builders' and Blacksmiths' Tools and Machines and Butchers Tools.

C. W. SCUDDER, St. Johnsville, N.Y.: Fifth Wheels and Forgings. Illustrations are shown of the various styles of Fifth Wheels, as follows, Derby, Cincinnati, Ohio, Wilson, Brewster, Timken and Flat Circles; also of Finished Shaft Couplings, Double-Reach Clips, Canopy-Top Standards, Body Loops, &c.

THE IOWA FARMING TOOL COMPANY, Fort Madison, Iowa: The Columbia Socket Forks. A pamphlet is devoted to illustrations and descriptions of these goods. They are referred to as being of an extra quality, the sockets, shanks and tines all being made of steel.

CINCINNATI MFG. COMPANY, Cincinnati, Ohio: Brushes and Wire Goods Illustrations and prices are given of Brushes of all kinds, Bird Cages, Fire Guards and Fenders, Stove Fixtures, Wire Moss Baskets, Iron and Steel Wire Cloth, Fences, Bank and Counter Railing, &c. They remark that Brushes should not be kept in a warm or dry place, and if from any cause Brushes have shrunk, that they can generally be restored by putting them in a cellar or a moderately damp place.

HUMPHREYSVILLE MFG. COMPANY, Seymour, Conn.: Augers, Auger Bits, Gimlets, &c. Illustrations and price-lists of these goods are given in their catalogue, covering a full line. Views are also given of Sperry's Bit Box, arranged to hold a set of Bits.

JOHN C. JEWETT MFG. COMPANY, Buffalo, N. Y.: Refrigerators, Water Filters, Water Coolers. Bird Cages, Brass and Nickel-Plated Goods, Toilet Ware, &c. These goods are shown in a variety of styles, in a well-arranged catalogue, with price lists, descriptions, &c.

GOODELL COMPANY, Antrim, N. H.: Knives and Forks, Carvers, Steels, Butcher and Miscellaneous Knives, Shoe Knives, Apple Parers, Cherry Stoners, Case Openers, Seed Sowers, Hammock Chairs, Champion Carriage Wrench, &c.

EAGLE MFG. COMPANY, Davenport, Iowa: Agricultural Implements. Corn and Cotton Stalk Cutters, combined Lister and Drills, one-horse Corn Drill, Cultivators, Sulky Plows, Plows, &c.

I. E. PALMER, Middletown, Conn.: Canopy Fixtures and Canopies, Window Screen and Piano Cloth, Hammocks and Suspension Devices. Illustrations show a large line of these goods, particular attention being directed to Hammocks and Hitching Devices. The manufacturer claims that all goods represented in the catalogue will be found of the highest type of excellence.

NASHVILLE SPOKE & HANDLE COMPANY, Nashville, Tenn.: Hickory Handles, Wagon and Carriage Spokes. The line of Handles manufactured by this company include Axe, Adze, Mattock, Pick, Maul, Hammer and Hatchet They also manufacture ironed Plow Singletrees and Doubletrees, and Wagon Singletrees not ironed.

SUTTON BROS. & BELL, Indiana, Pa.: Agricultural Implements. Stump Puller, Land Rollers, Iron Vases, Cant and Mill Hooks, Blacksmiths' Upsetters, Swages, Tire Benders and Tuyeres.

PENNSYLVANIA WIRE WORKS, Edward Darby & Sons, proprietors, Philadelphia, Pa: Wrought and Cast Iron Railings, Window Guards, Wire Goods, Bird Cages and Wire Work of every description. The company state that with the aid of improved machinery they are enabled to offer the very best inducements to customers.

MAINE MFG. COMPANY, Fairfield, Maine: Refrigerators, Window Screen Frames, Folding Tables, &c. Illustrations and price-lists of these goods are given in their catalogue. The manufacturers claim that their Refrigerators are constructed upon modern and scientific principles.

PREMIER CYCLE COMPANY, New York, and Orange, N. J.: Kohinoor Roadster, Kohinoor Light Roadster, Catford Premier Semi-Racer, Ladies' Premier, Standard Premier, Premier Racer, Outing Premier, and Lucas' "Cyclealities."

ROMER & CO., Newark, N. J.: Electrical Goods, Builders' Hardware, Padlocks, Night Latches, &c. Various catalogues are devoted to these different lines of goods.

CALIFORNIA WIRE WORKS, San Francisco, Cal.: Wire Ropes and Cables, Wire, Wire Nails, Barbed Wire, Wire Cloth, Wire Netting, Wire Staples, and the Hallidie Ropeway for the Transportation of Ore and other materials by means of an endless traveling Wire Rope Price-lists and illustrations are given in their catalogues, with valuable tabulated matter.

Exports.

PER BARK STAR OF THE EAST, JUNE 10, 1892, FOR DUNEDIN AND LYTTLETON.

By R. W. Cameron & Co—10 cases Fruit Jars, 7 packages Lawn Mowers, 1 crate and 20 cases Handles, 5 boxes Axes, 6 cases Handles, 1 case Hardware, 1 box Emery Wheels, 1 box Whetstones, 1 keg Tacks, 1 case Tire Shrinkers, 1 box Nails, 2 cases Handles, 3 cases Hardware, 1 case Wringers, 1 case Egg Beaters, 1 case Pumps, 1 case Wrenches, 1 case Traps, 1 box Whetstones, 12 cases Cartridges, 1 case Braces, 2 cases Handles, 5 boxes Agricultural Implements, 8 Stoves, 3 cases Hardware.

PER BARK MENTONE, JUNE 11, 1892, FOR ADELAIDE, AUSTRALIA.

By Henry W. Peabody & Co.—1 case Lead Pencils, 12 packages Hardware, 11 cases Nails, 2 crates Handles, 13 packages Hardware, 1 cask Pumps, 11 packages Lawn Mowers, 3 cases Wringers, 4 packages Hardware, 13 packages Hardware, 7 packages Pumps, 4 cases Hardware, 2 cases Handles, 10 cases Handles, 25 packages Hardware, 8 cases Agate Ware, 5 cases Axles, 3 packages Hardware, 1 case Mouse Traps.

By Arkell & Douglas.—2 cases Lanterns, 6 cases Wringers, 5 cases Wrenches, 26 crates Handles, 3 cases Rakes.

By R. W. Forbes & Son.—2 cases Cow Bells, 9 packages Carriage Hardware, 4 cases Wringers, 2 cases Carriage Bolts.

By Strong & Trowbridge.—5 cases Axes, 1 case Saws.

By Hussey, Binns & Co.—13 cases Shovels.

By Winchester Repeating Arms Company.—1 case Guns, 16 cases Cartridges.
By R. W. Cameron & Co.—36 kegs Nails, 100 reels Barb Wire.
By John A. Gifford.—16 packages Plows, 3 packages Hardware.
By W. H Crossman & Bro.—272 cases Agricultural Implements, 250 cases Hardware, 22 cases Handles, 9 cases and 2 barrels Hinges, 100 coils and 3 packages Sisal Rope.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

In the more staple lines of Paints and Colors and in several lines of specialties business has been very good. For that matter, the general distribution would appear to be fully up to average volume for the month of June, while in the instance of some few commodities the movement is in flattering contrast with that of the preceding week. To this favorable outline of the situation may be added the statement that values have shown remarkable steadiness in nearly all departments, making altogether a condition of affairs more enviable than that which has frequently been experienced at this season of the year. Operations, however, do not reach remarkably large proportions in any department. Instead, a good, even patronage seems to be enjoyed nearly throughout and prices, with hardly an exception, remain very steady.

White Lead.—Corroders report a good average distribution of their product in this and near by markets, with the movement covering various sized packages, but relatively the best in the instance of small kegs. Sales of mixed Leads also keep up very well, and while competition becomes keen at intervals, values are quite as steady as they have been at any time during the past 60 days. As a matter of fact, irregularity in quotations by jobbers is less conspicuous just now than it was during the early part of June, and manufacturers' lists are more closely followed, although still deviated from more or less where purchases of other goods prompt concessions on the pigment as a "leader." The condition of the market for base materials and the surroundings otherwise are not indicative of any impending changes in corroders' figures.

Red Lead, Litharge, &c.—In the lines specified and in Orange Mineral there is a fair average business passing, although buyers' operations are still chiefly of hand-to-mouth character, and former prices prevail throughout, giving the market decidedly steady tone.

Zincs.—Owing to revision of prices by the manufacturers, local agents have issued a new list on the Vieille Montagne Zinc Company's brands of Oxide, quoting as follows:

Dry, in Lots of Less Than Ten Barrels.

Antwerp Red Seal	$0.07⅛
Antwerp Green Seal	.07¾
Paris Red Seal	.07⅞
Paris Green Seal	.09

Discounts remain at 1 % on lots of 10 barrels, 2 % on lots of 25 barrels and 4 % on lots of 50 barrels, one or mixed grades.

Ground in Poppy-Seed Oil.

	In drums.	In cans.
Red Seal:		
Less than 1 ton	$0.10¼	$0.10¾
Lots of 1 ton	.10	.10½
Green Seal:		
Less than 1 ton	.11¼	.11¾
Lots of 1 ton	.11	.11½

Current business in the imported article is moderate and hardly up to the former average for this season of the year. Introduction of high-grade domestic Zinc is accountable for this in a certain measure, but more general use of the ordinary quality is not without effect. Of the latter, sales are of seasonably good volume and deliveries still quite liberal, while prices for the several grades remain without change.

Colors, &c.—The sale of most descriptions of Dry and Oil Colors continues very good; not as free, perhaps, as might be wished, yet quite as good as during the early part of June. First quality goods for house painters' use continue steady at former prices, lower grades show about the usual variation, and on bulk goods for grinders' use the fluctuation is moderate. Ready-mixed Paints are finding somewhat irregular yet very fair aggregate sale, and the market for the goods is devoid of really new feature.

Paris Green.—Manufacturers report continued free deliveries of this article, particularly in small packages, and, in some instances where production has been below the June average, deliveries are rather backward at the moment. Prices therefore remain very steady at first hands and extreme low quotations made by some jobbers a few weeks ago are not repeated.

Miscellaneous.—Block Chalk has been sold to a fair extent at $2, and the market is quite firm. Whiting moves freely on back orders, but is otherwise rather quiet. Putty is in fair demand and unchanged as to price.

Oils and Turpentine.

In this line about the only change of any importance is an advance of about 2¢ on Lard Oil, due to enhanced cost of raw material. On other Oils values have continued remarkably steady, and the general surroundings at present are not suggestive of any impending changes of a radical character. Business has been rather slow in most departments, yet general distribution on home account appears to be quite as full as it usually is at this period of the year, and accumulations of supplies in manufacturers' hands are represented as being moderate. Generally speaking, existing conditions are favorable to steady values in most departments.

Linseed Oil.—Prices for city brands stand precisely as they were a week ago and for outside brands former quotations are named by agents. From second hands the offering is not sufficient to have any pronounced effect. Distribution has continued good, and that fact, in connection with the condition of the market for raw material, keeps the market in favorable shape. At present prices there is no incentive for the use of adulterants or substitutes and the movement of pure Oil proceeds steadily, comparing favorably with the average of the past two or three months and preventing any serious unwieldy accumulation on crushers' hands.

Cotton Seed Oils.—Apart from about 1500 barrels of refined product taken for export account there has been little movement the past week, and the demand from all quarters is rather slow at the present time. However, steady inroads are being made upon the supply held by manufacturers, and prices for all grades are held quite firmly. Business has been chiefly at 29¢ @ 29½¢ for prime crude and 32¢ @ 33¢ for prime Summer Yellow, and corresponding figures for other varieties.

Lard Oil.—Prices for Lard Oil have been advanced considerably by speculative influence, and pressers' quotations for Lard Oil are correspondingly higher. City brands of prime are now quoted at 58¢ @ 59¢, while out of town brands, full test, are not offered at much, if anything, less than 57¢ on the spot or to arrive. Production in this quarter is said to be very closely absorbed, and the demand continues good for the season, making altogether a firm market.

Fish Oils.—Thus far there has been little improvement in the Menhaden fishing, and the Oil that comes forward is nearly all taken at previous prices, say 30¢ @ 31¢ for Northern and 29¢ @ 30¢ for Southern product. In crude Whale Oil there has been rather more business, but the market for crude Sperm remains quiet. The manufactured products are without change in price and sell very fairly.

Miscellaneous.—There is rather better tone to the market for common Olive Oil and Cocoanut Oil, but sales are chiefly of routine character and the general demand is rather slow.

Spirits Turpentine.—Early in the week prices improved to 30½¢ @ 30¾¢ for regular and 31¢ for machine barrels, but somewhat freer offering, together with rather slow demand, caused a reaction, and the market latterly has been rather flat. Late arrivals increased the stock in receivers' hands at this port to 2000 barrels and caused prices to recede to 30¢ for regular and 30½¢ for machine barrels at the close.

The Clauss Household Knives.

The Clauss Shear Company, Fremont, Ohio, are introducing these knives, as illustrated herewith. The knives in Figs. 1 and 2 have scalloped or serrated edges, which, it is stated, add greatly to the cutting quality of the knives, and are referred to as an improvement over the knife with a plain edge for cutting bread or cake. In cutting bread or cake the knife is used as a saw. The manufacturers claim that warm bread can be cut as easily as cold, and that the crowning point of the cake knife is that cakes with frosting can be cut with exact nicety by simply drawing the knife across the frosting with a slight pressure, which will cut it without breaking or cracking it in the least. The bread and cake knives are both highly polished and finished, and all have strong, durable malleable-iron handles, each securely fastened by two rivets. The paring knife is referred to as being superior for that purpose. The point is made that the handles will not rot or wear out when left lying in water.

Fig. 1.—The Clauss Bread Knife.

Fig. 2.—The Clauss Cake Knife.

Fig. 3.—The Clauss Paring Knife.

The F. & N. Lawn Sweeper.

The F. & N. Mfg. Company, Richmond, Ind., are introducing a lawn sweeper, as illustrated herewith. The drive wheels are 10 inches in diameter, and are so placed in the construction of the sweeper that, it is stated, the weight of the machine comes on them, thus relieving the operator from carrying the weight of the debris which collects in the receptacle. The sweeping device is referred to as peculiar in that it is a combination of a brush and a rake. The brush for taking up small litter, as broken glass, short clippings of grass, shavings, small twigs, leaves, &c., while it is stated the rake will take up stones as large as an egg, also bones, pine cones, &c. It is claimed that the construction of the brush allows it to work over a smooth or rough surface, and by a slot in the side frame the hight of the brush may be regulated as desired. It is explained that the handle is attached in a way that makes the sweeper very easy to handle, and that the receptacle is large, holding a barrel of litter, and can be easily detached. The point is made that the sweeper is as useful in sweeping leaves in the fall as in sweeping grass in the spring. The manufacturers state that the No. 2 sweeper, which is 24 inches wide, will run as easily as a 16-inch lawn mower. Three sizes of sweepers are made, No. 1, 19 inches wide; No. 2, 24 inches wide, and No. 3, 36 inches wide. The receptacle is so constructed that it can be knocked down for shipping. The sweeper is designed for use in parks, picnic grounds and lawn tennis courts

The F. & N. Lawn Sweeper.

Pflueger's Slack Line Attachment.

The Enterprise Mfg. Company, Akron, Ohio, are introducing this article, as illustrated in the accompanying cuts. It is fastened on the pole, as shown in Fig. 2, near the large end, and is designed to take up the slack line. It may also be used to keep the hook in place, when not in use.

Fig. 1.—Pflueger's Slack Line Attachment.

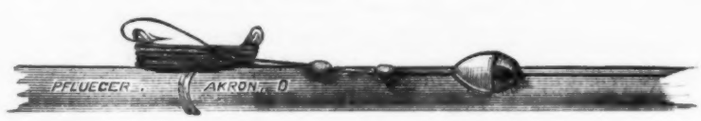

Fig. 2.—Application of Slack Line Attachment.

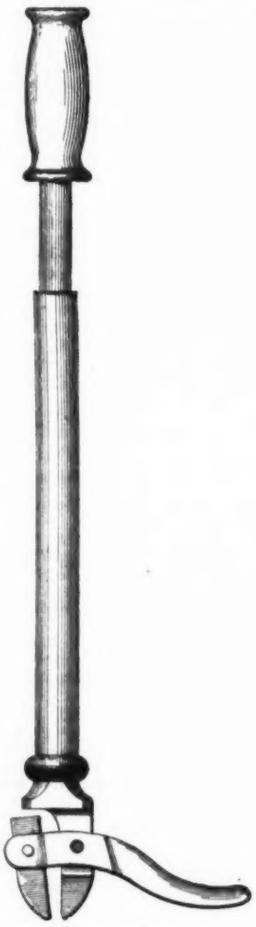
The Ellrich Nail Puller.

The Alford & Berkele Company, 77 Chambers street, New York, are introducing this article, as illustrated herewith. It has wrought-iron socket, malleable iron lever, Jessop's steel jaws, tempered, and machine steel rammer. The jaws are interchangeable and adjustable, and it is stated that a fractured jaw does not end the usefulness of the puller, as the jaw can be replaced at a slight cost. The puller has no springs, and the rammer handle does not come near enough to the socket to allow the hand to be mashed when operating the puller. The manufacturers claim that the puller cuts iron bands on boxes or bales, draws nails with or without heads, even if below the surface as much as ¼ inch, and that it pulls nails perfectly straight. The puller is 19 inches long and weighs 5 pounds.

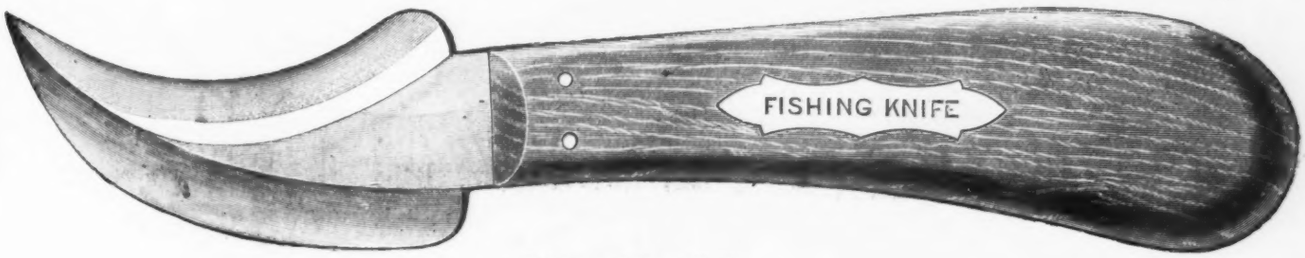


The Ellrich Nail Puller.

A Fishing and Camp Knife.

An illustration is herewith given of a new fishing and camp knife which has just been put on the market by Hibbard, Spencer, Bartlett & Co. of Chicago, for whom it is specially manufactured. The cut represents the full size of the knife. The blade is made of heavy forged steel, beveled on both sides and inserted into a solid cocoa handle, to which it is firmly riveted. Both the blade and the handle

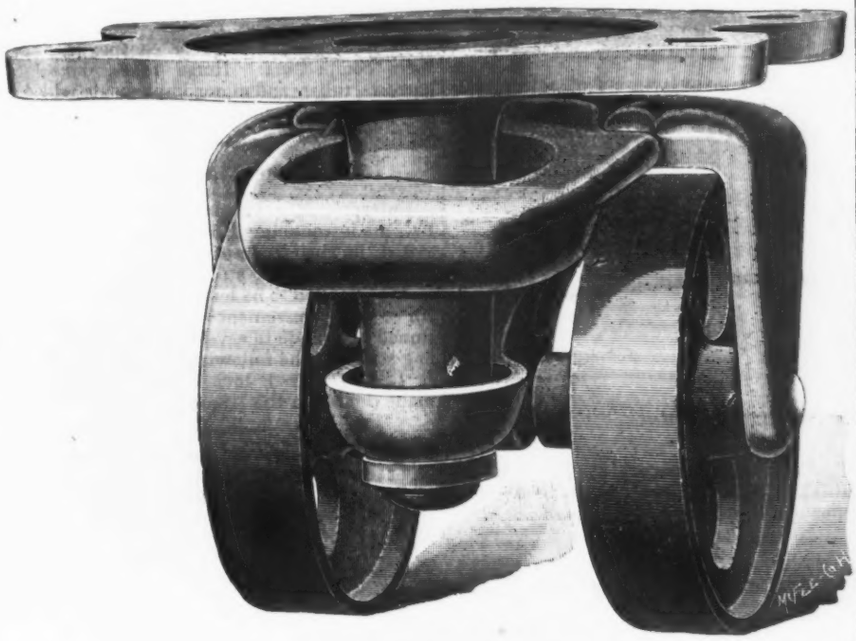
are handsomely polished. The handle bears a German-silver shield stamped "Fishing Knife." The handle has a hole through one end of it for a string. A heavy leather shield is furnished with this knife to protect the point of it when carried in the pocket. The knife is intended for general camp use, but it will also be found of service for other purposes, the firm stating that it will prove an excellent tool for cutting binder twine and performing other work in the hands of farmers.



Fishing and Camp Knife.

Gwinner's Hercules Truck Caster.

The Gwinner Mfg. Company, Hamilton, Ohio, are offering this caster, as illustrated herewith. The caster contains two floor wheels and one anti-friction wheel. The anti-friction wheel is one-half the diameter of the floor wheels, located in the rear of the axle, and has a convex face to lessen the friction on the plate. The stem pivots, by ball and socket in the foot step bearing, while the housing carries a separate constructed keeper for the stem. The anti-friction wheel is designed to distribute the weight on the caster and to prevent rattling. The axles are of steel, and are supported by the housing at each end and in the middle. The casters are made in three sizes, with diameter of floor wheels from 2½ to 4⅝ inches; hight of caster from 3½ to 6½ inches and carrying capacity from 600 to 4000 pounds.



Gwinner's Hercules Truck Caster.

The Nitro Rammer.

The Bridgeport Gun Implement Company, Bridgeport, Conn., and 313–315 Broadway, New York, are introducing this article, as illustrated in the accompanying cuts. They have placed this article on the market because of the necessity of exerting a uniform and steady pressure in loading high-grade paper shells with nitro powders. In using the rammer to seat wads over powder the rammer is pressed down until the spring comes to a stop. It is stated that when the springs are thus pressed down a uniform pressure of 19 pounds is produced, which, after a series of careful experiments, has been proven to the manufacturers as the most suitable pressure for the proper ignition of nitro powders in high-grade paper shells having extra strong primers. In loading nitro powders in ordinary paper shells with regular primers a much greater pressure must be used, and they therefore furnish extra strong springs to order (25 or 30 pounds pressure), which can be inserted in the regular nitro rammer. This is done by pressing the bottom spring, which protrudes through the slot inside the rammer, thus releasing the rammer head from the tube, when the spring can instantly be taken out and replaced. The heavy springs are only furnished to order.

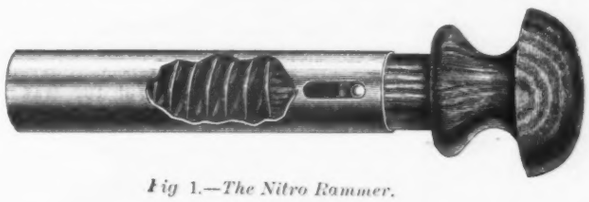


Fig. 1.—The Nitro Rammer.

Fig. 2.—Tube and Base for Nitro Rammer.

Dodd's Automatic Clothes Rack.

The Chas. E. Dodd Mfg. Company, Williamsport, Pa., are offering this rack, as illustrated herewith. Figs. 2 and 3 illustrate the manner in which the rack may be used. The manufacturers state that the rack has 30 feet of hanging surface, and that it is purely automatic in operation. It is explained that to close the rack the operator stands on the same side as the rollers are and takes hold of one of the top rounds; the rack is then drawn

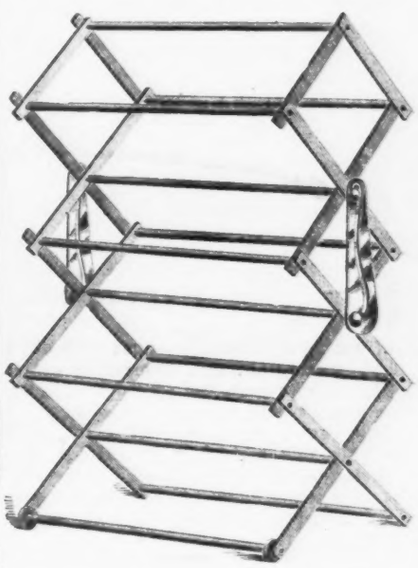

Fig. 1.—Dodd's Automatic Clothes Rack.

toward the person and raised a little, resulting in the rack closing itself. Following these directions the side bars or supports are thrown out of the pockets. For hanging over a stove or radiator, or to

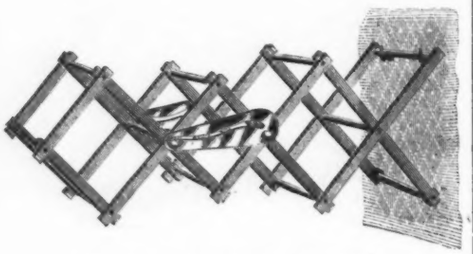

Fig. 2.—Dodd's Automatic Clothes Rack, Hanging.

suspend from the wall, as in Fig. 2, No. 4 or 5 screw hooks are used. When closed as in Fig. 3 it can be hung up or set aside in this compact manner, requiring little room. It will be noticed from this cut that one round, or either side of the rack,

Fig. 3.—Dodd's Automatic Rack, Closed.

is set in further than the rest. This is done to prevent the clothes touching or hanging over those on the round below, as well as giving better circulation of air through the entire rack.

Behren's Adjustable and Folding Line Spreader.

The Enterprise Mfg. Company, Akron, Ohio, are offering a line spreader, as illustrated herewith. It consists of two pieces

Behren's Adjustable and Folding Line Spreader.

of spring wire, running upon each other, and passing through a metallic center. The cut represents the spreader as closed, in which position it is 8 inches long. It may, however, be extended to nearly double this hight. It is referred to as having marvelous catching qualities, and designated as a fish raker. The spreaders are furnished in brass, nickel or German silver.

Sweatt's Barrel Tray.

Sweatt Mfg. Company, Minneapolis, Minn., are putting on the market the barrel tray represented herewith. It is described as made with staves or slats so shaped and bent that when bolted together they form a dish-shaped tray. The staves are held in place by dowel bolts, which pass through the several pieces and are then drawn closely together by the nuts on either end of the dowel bolts. This makes a tray which, it is claimed, will not split and is especially serviceable. The large capacity of the tray is also mentioned. Fig. 2 presents an illustration of the tray in connection with one of the company's barrows.

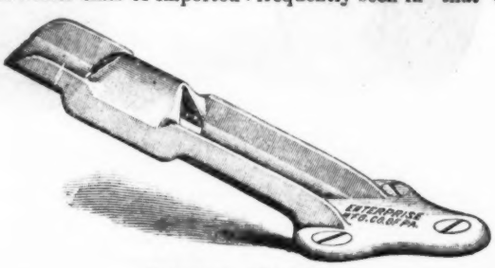
Fig. 1.—Sweatt's Barrel Tray.

Fig. 2.—Barrow with Sweatt's Barrel Tray.

American manufacturers of agricultural machinery are doing a good share in supplying the wants of farmers in France, and the British vice-consul at La Rochelle thinks it will be some time before Frenchmen can equal the better class of imported machines. The vice-consul says that up to the present moment the greater part of the more complicated and expensive machinery has been imported from England and America, and there has been no serious competition of home made with it; this is principally owing to its being more perfect, also in some degree to the fact that the duty and carriage do not increase the cost to the same extent as in the simpler and less costly articles. It seems odd that the United States is able to turn out these machines as good as English, send them 3000 miles, and sell them cheaper than their competitors. Horse rakes, horse harrows, rollers and minor implements sold last year were home made.

Enterprise Flag Holder.

Enterprise Mfg. Company, Philadelphia, Pa., are introducing a flag holder, as illustrated in the accompanying cut. It is referred to as being strong and well made, and is intended to be screwed to a window-sill or other convenient place. These are tinned and made in several sizes to receive flag staffs of the following thicknesses: $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$ and 1 inch. They are also made double in the $\frac{1}{2}$ inch size.



Enterprise Flag Holder.

The Philadelphia "mechanic's home," an exact reproduction of the characteristic small two-story brick dwelling house so frequently seen in that city, will be exhibited at the World's Fair, with the hearty indorsement of the Philadelphia Builders' Exchange.

Cross-Stitch Sewed Belt.

Boston Woven Hose & Rubber Company, Boston, Chicago and San Francisco, are offering a cross-stitch sewed belt, belt are in a straight line, because all the needles being fixed to a single steel bar. The comparative strength of the cross-stitch belt and other sewed belts is illustrated by the company in Fig. 3, the

Fig. 1.—Transverse Threads.

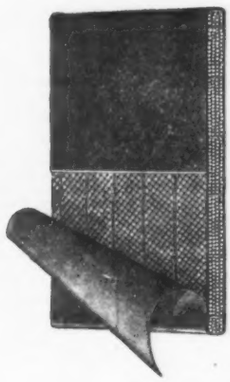


Fig. 2.—Longitudinal Threads.

without seam, as shown in Figs. 1 and 2. In this belt the threads on one side run longitudinally, while on the other side they are tied together by threads running transversely. Thus, it is stated, the belt is tied together thoroughly in all directions. It is explained that on this belt all of the longitudinal threads are tied together by the under transverse thread, so if one thread happens to have a tighter tension than the others the under thread equalizes it with the others, so that the entire number of threads have identically the same tension. By the nature of its construction the threads running across the section above the belt fasteners representing the cross-stitch belt. It is stated that in the cross-stitch belt the transverse threads are designed to run on the outside of the pulley, so that when the belt is run over a small pulley the threads do not break or weaken the belt by cutting into the duck.

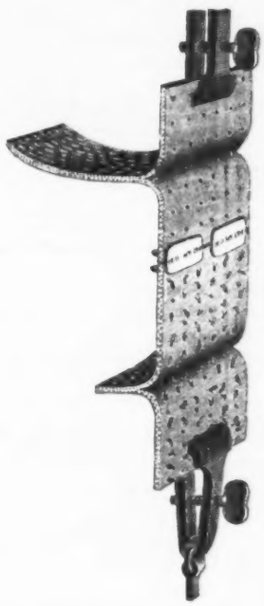

Fig. 3.—Testing Strength of Rubber Belts.

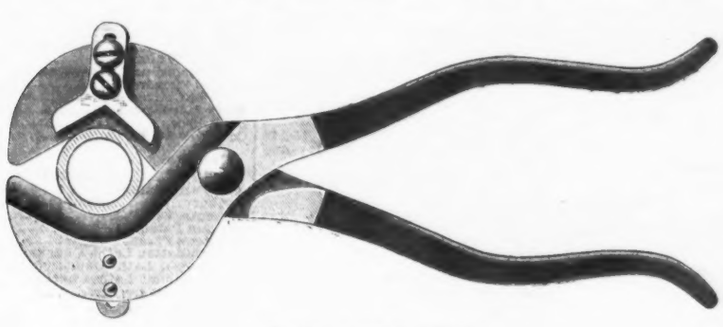
Harlow Lead-Pipe Cutters.

C. E. Barrett & Co., Brockton, Mass., are introducing this article, as illustrated herewith. The tool is made of the best quality steel, and the cutting edges are beveled on opposite sides so that flat surfaces work on each other as in shears. An adjustable brass gauge is attached to the flat surfaces of the blades, on opposite sides, each by two setscrews. The manufacturers claim that the cutters are efficient in execution, economical, durable, and that they cut pipe without either chips or burrs, or in any way distorting it. The point is made that they can be used where it would be impossible to operate a saw, and that they save time, trouble and expense by chips not getting into the pipes. The cutters are made in three sizes—No. 1 cutting-pipe from ⅛ to 1 inch, No 2 from 1 to 2 inches and No. 3 the same as No. 2, only made much heavier for thick and heavy work.



Harlow Lead-Pipe Cutters.

The forest trees on Puget Sound are the subject of an interesting letter from Tacoma. The trees are almost exclusively of the cedar, fir and pine varieties, stand closely on the ground, and range in height from 130 to a little over 300 feet. In diameter at the base they are often 6 and 8 feet. A "stick" being prepared for one of the sills of the Washington Exposition Building at the World's Fair is 125.4 feet long. The diameter at the base was 6.4 feet, and at the top 46 inches.

CURRENT HARDWARE PRICES.

JUNE 29, 1892.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

Our Manganese Bronze is invaluable where Castings of great Tensile Strength are needed. In this quality it is nearer Steel than any other alloy in the market, and in appearance the castings are unequaled.

We Make Larger Castings and More of Them than Any Competitor.

A PERFECT SELF-LUBRICATOR.

RAYMOND'S ALUMINUM COPPER ANTI-FRICTION METAL

FOR SALE BY ALL DEALERS.

STANDARD BABBITT METALS, INGOT BRASS AND BRONZE.

RAYMOND LEAD COMPANY, Chicago.

NEW EDITION, REVISED AND ENLARGED

HISTORY OF

The Manufacture of Iron in all Ages,

and particularly in the United States, from Colonial Times to 1891.

Also a short History of early Coal Mining in the United States, and a full account of the influences which long delayed the development of all American Manufacturing Industries.

BY JAMES M. SWANK,

Secretary and General Manager of the American Iron and Steel Association for Twenty Years.

From 1872 to 1892. 574 Pages, Best Cloth Binding.

SECOND EDITION, THOROUGHLY REVISED AND GREATLY ENLARGED.

This second and last edition of this work has been prepared because much new information relating to the early iron history of our own country and of other countries has come into the author's possession since 1884, and because seven succeeding years of great activity in the development of the world's iron and steel industries have been productive of important statistical and other results which are eminently worthy of preservation in a condensed and permanent form.

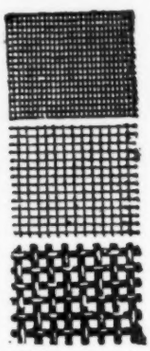
WIRE CLOTH,

Hex. Nettings, Wire Lath and Fencing.

Foundry Riddles, Casting Brushes, Sand and Coal Screens, Shovels, Wrought Iron Railing for Banks, Offices, Residences; Ornamental Brass Work, Wire Work and Wire Window Guards.



EXPANDED METAL

Is the "Trade" name for Plates of Soft Steel cut and opened out into webs of diamond or other shaped mesh.

FENCING. SUBSTANTIAL, LIGHT AND CHEAP.

Is used extensively for **Rail Road, Cemetery, Farm, Village and Lawn Fences, Gates, Skylight, Window and Elevator Guards, Office Railings and Partitions, Chicken Yards, Tree Guards, Grape Arbors, Lattice and Ornamental Lawn Work. More durable than wire.**

Our Steel Lath commends itself to Architects and Builders as the best metallic lath in use.

It requires no stretching or furring; its form makes it rigid, and yet it can be readily molded to any required curve or angle. Gives a perfect "key" throughout.

Specify our Lath to reduce the fire risk on your buildings.

LATHING.

AMERICAN SCREW COMPANY

PROVIDENCE, R. I.

COLD FORGED PRODUCTS.

"Spur Pointed" Wood Screw.

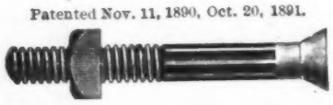
Patented May 10, July 19, 1887: Oct. 29, 1889; Aug. 19, Oct. 21, 1890: April 7, May 12, 1891.

ITS ADVANTAGES ARE:

Stronger than a cut screw.
Forged nick.
Requires the use of only one bit.
Inserted easier.
Increased holding power.
Centralized point.
Is cold forged, and entire surface has a metallic skin.

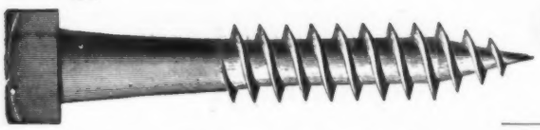
Samples Sent on Application.

Patented Nov. 11, 1890, Oct. 20, 1891.



FLUTED TIRE BOLTS.

SEND FOR SAMPLES.



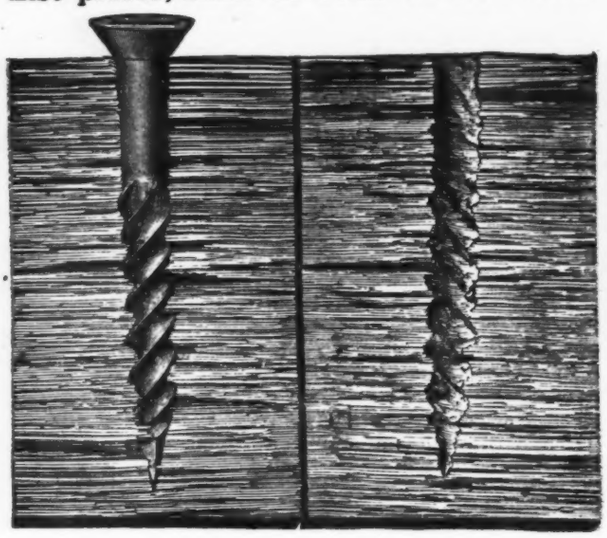
Cold Forged Coach Screws.

Patented May 10, July 19, '87; Oct. 29, '89; Aug. 19, Oct. 21, '90: Apr. 7, '91.

"ROGERS' DRIVE SCREWS."

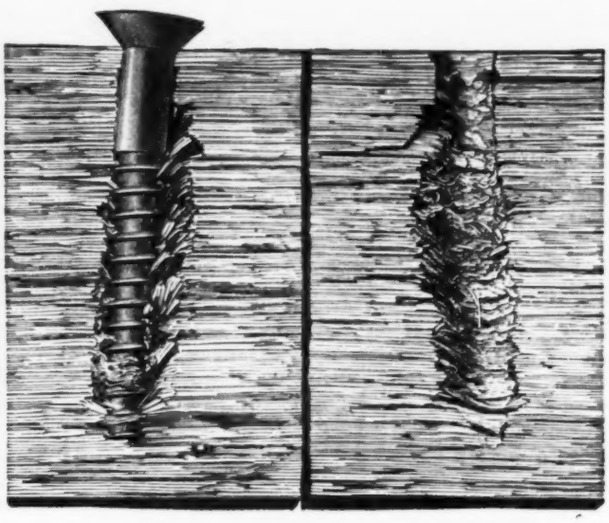
Patented May 10, 1887; July 19, 1887; July 10, 1888. Other patents pending.

List prices, same as common iron wood screws. Discount for Flat Heads, 82½%



THE "ROGERS DRIVE SCREW,"

Driven with a hammer its entire length.



A COMMON CUT THREAD SCREW,

As ordinarily inserted, *i. e.*, driven two-thirds of its length with a hammer and the balance with a screw-driver. Fibres of the wood are necessarily broken, and holding power of screw much impaired.

Should be driven with a hammer its entire length.

1. Turns like a screw when driven with a hammer.
2. Holds stronger than a common screw as ordinarily inserted.
3. Does not break the fibres of the wood.
4. Cheaper than a common screw.
5. Is cold forged and has metallic skin over entire surface.

Heber Wells, 8 Spruce St., N.Y.

SOFT STEEL PLATES.

We are making a specialty of soft steel plates for Blanking and Stamping, with clean, smooth surface, rolled carefully as to gauges, ranging from No. 9 to 16 inclusive, in widths up to 15½ inches, and to any multiples of length desired.

We can also furnish plates freed from scale and so treated as not to rust readily before using.

By the use of these, instead of raw plates in Stamping, the great saving of wear on costly dies and increased production of better work will more than cover the increase of cost over that of raw plates. Trial orders solicited in small or large quantities.

STEAM PLANTS.—Before purchasing any **FEED WATER HEATER and PURIFIER**, or deciding upon the adoption of any **System of Steam Heating**, kindly send us postal, and we will send one of our representatives, at our expense, to call upon you personally, in order to explain advantages which we guarantee over all others.

WEBSTER'S "VACUUM" FEED WATER HEATER AND PURIFIER.

Sizes from 30 to 2,500 horse-power carried in stock. Over 125,000 horse-power in daily use in the largest steam plants in the United States. *Send for Catalogue.*

CARDINAL POINTS.—Highest temperature, purest feed water upon least quantity of exhaust steam, free exhaust to atmosphere, between engine and heater.

"WILLIAMES' VACUUM SYSTEM OF STEAM HEATING."

Without Back Pressure upon the Engine Guaranteed.—*Patent sustained in two Suits in the United States Circuit Court.* Adopted by 300 of the largest Factories, Mills, Electric Light Companies, Market Houses, Office Buildings, Schools, Theatres, Churches and Railroad Stations. *Send for Catalogue.*

ADVANTAGES.—Free exhaust to atmosphere, relief of back pressure, saving power, water of condensation, increasing efficiency of heating system, saving from 10 to 40 per ct. of fuel. Exact percentage can be determined after making examination of steam plant.—**ALL INFRINGERS WILL BE PROSECUTED.**

Can be attached to any steam plant. Furnished upon trial under guarantee. WARREN WEBSTER & CO., Main Office & Works, 491 N. 3d St., Phila'a.

OTTO GAS AND GASOLINE ENGINES.

SIZES: One to One Hundred Horse-power.

SHERWOOD MFG. CO., Buffalo, N. Y.

Blinn's Tin, Sheet-Iron and Copper Plate Worker

A New, Revised and Enlarged Edition, from New Type, with New Engravings.

One of the Most Popular Technical Books ever published in the United States.

JUST READY.

A PRACTICAL WORKSHOP COMPANION

—FOR—

TIN, SHEET-IRON

—AND—

COPPER-PLATE WORKERS.

Containing rules for describing various kinds of Patterns used by Tin, Sheet-Iron and Copper-Plate Workers. Practical Geometry. Mensuration of Surfaces and Solids; Tables of the Weights and Strengths of Metals and other Materials; Tables of Areas and Circumferences of Circles; Composition of Metallic Alloys and Solders, with numerous valuable Receipts and Manipulations for every-day use in the workshop. By Leroy J. Blinn, Master Mechanic. A new, revised and enlarged edition, printed from new type, and with 170 newly engraved illustrations.

In one volume, 12mo, 296 pages, price $2.50, free of postage to any address in the world.

☞ It having been found necessary to make a new set of electrotype plates and new engravings of this most popular book—the old ones having been worn out by actual use—it was determined to have the book re-edited and to add to it, in the different departments, new, recent and necessary matter. All of the old illustrations of patterns have been retained, and new ones have been added. The portion treating of metallic alloys and solders has been entirely re written, so as to have a more systematic arrangement, and to bring it at least with the best modern practice in this interesting and important field. In all the other departments new matter has been added, every effort having been made to render the entire work, in the future, if possible, even more useful to the tin, sheet iron and copper-plate worker than in the past.

ABSTRACT OF CONTENTS.

Rules for Describing Patterns; Practical Geometry; Mensuration of Surfaces; Mensuration of Solids, and Capacities of Bodies; Tables of Weights, &c.; Tables of the Circumference of Circles and of the Areas of Circles; Rules for Rendering the Tables Useful; Sizes of Tinware; Capacity of Cylinders, and various other Useful Tables and Information; Practical Receipts, Varnishes, Lacquers, Cements, Metallic Alloys, Miscellaneous Receipts; Strength of Materials, with Tables. Index.

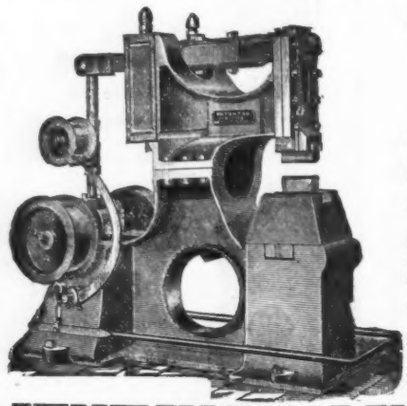
TAKE NOTICE.

We want to hammer into your mind and soul the neccessity and prime importance of taking notice that the reason the



JENKINS POWER HAMMER

is so much better than any other, is because **Jenkins takes Notice.** He took notice of the wants; he took notice of the defects and deficiencies; he took notice of the trouble and expense of using inferior and defective tools and by everlastingly taking notice he saw at last what was the matter with hammers. And then **by the use of skill and patience and untold gold produced the hammer we now offer.**

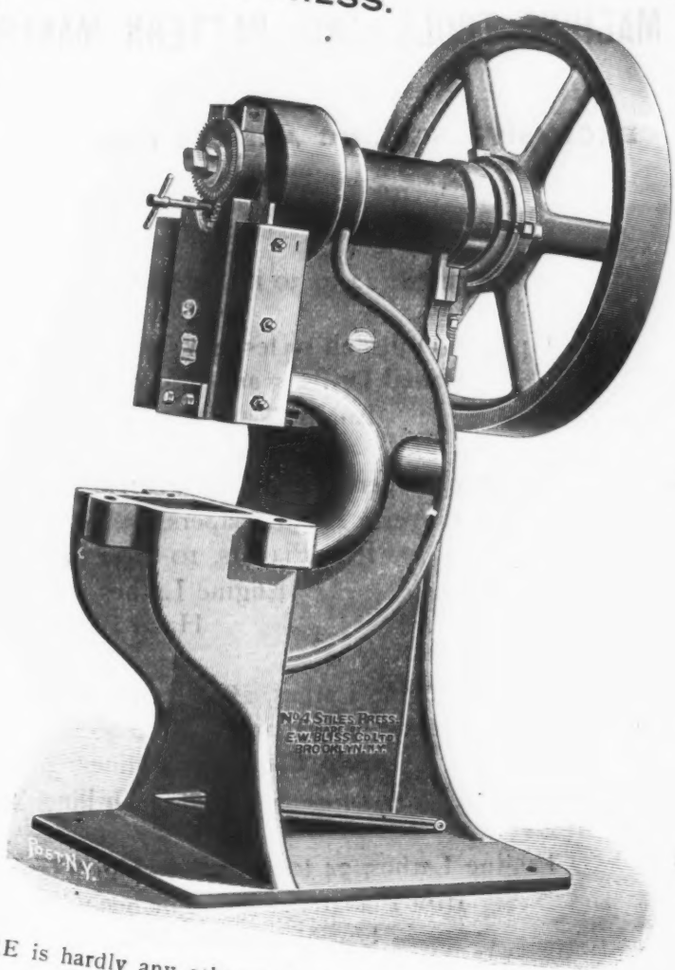
E. W. BLISS CO. (Ltd.), BROOKLYN, N. Y.

No. 4 STILES PRESS.



THERE is hardly any other style of power press that has met with such general favor among manufacturers of articles requiring heavy punching as the line of Stiles Power Punching Presses which we designate by the numbers of **0** to **5½**. Nearly all the best manufacturing establishments in this line in America, and many in Europe, employ one or several of these presses. The range of work for which they are adapted covers nearly every kind of blanking, cutting, punching, perforating, forming and bending, including a large proportion of the operations needed in the manufacture of hardware, locks, cutlery, guns, sewing machines, typewriters, and many other articles made out of sheet metal.

We make the Stiles Drop Hammers, Forging and Punching Presses and Machinery for Hardware Manufacturers, etc., etc.

WINGS' PATENT

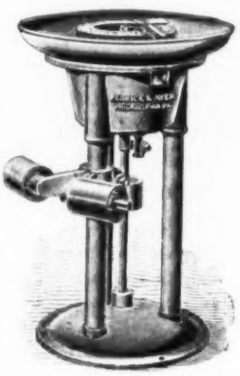
CENTRIFUGAL GRINDING MACHINES.

HORIZONTAL DOUBLE GRINDER.

This machine is adapted to machinists' tool grinding and carries two grinding wheels, one at each end of arbor.

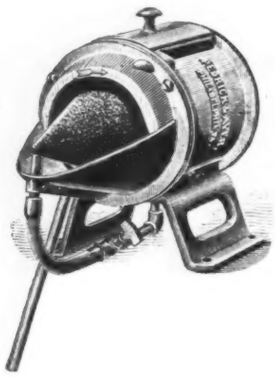
The water is carried to wheels from tank by head force, and back again into tank by centrifugal force, keeping a continuous circulation as long as enough water is kept in tank to cover supply pipes.

UPRIGHT GRINDER.



On this machine the water is brought on to and carried over the surface of wheel and back to tank again by centrifugal force alone and so continuously as long as water is kept in tank.

The grinding face of wheel is slightly beveled to accommodate the grinding of long knives which have to lay across the wheel from one side to the other. It is designed for grinding all kinds of wood-working tools having straight edges like planes, chisels, knives, etc., and is also effective for grinding machinists' and kindred tools.



GOUGE AND CUTTER GRINDER.

This little machine is designed for grinding inside gouges, cutters and tools having concave cutting edges, and will grind all such tools to a true arc of a circle within its limits. It will be found more serviceable and effective than a whole gang of wheels mounted in the ordinary way. It supplies itself continuously with an abundant amount of water in the same manner as the Horizontal Double Grinder. This machine is made either single or double, as desired.

The above machines possess all the virtue of the emery wheel for rapid cutting and accurate work, and WITHOUT DRAWING OF TEMPER. They are guaranteed in every particular. Circulars and prices on application.

THE BRIDGEPORT GUN IMPLEMENT CO.,

Depot for Sales. 313 and 315 Broadway, New York

THE RIDGWAY BALANCED STEAM-HYDRAULIC

KING OF KRANES.

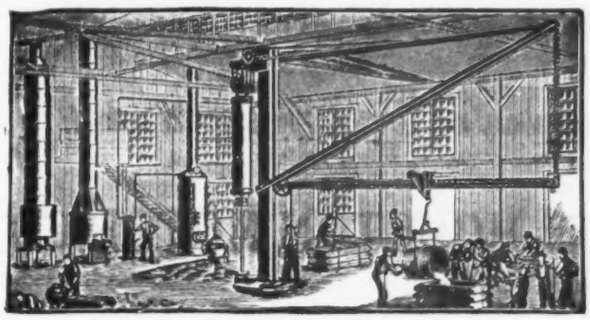
THE BEST FOUNDRY CRANE KNOWN.

RENSSELAER MFG. CO., TROY, N. Y., who have just started a 5-ton Crane in their foundry, say: "The principle of your Crane is right, and we do not hesitate to say that it is the best thing for foundry use that we have ever seen or heard of."

THE JOHNSON CO., JOHNSTOWN, PA., after using two 5-ton Cranes in their foundry for three years, have just ordered a 10-ton of same style.

THE PENNSYLVANIA STEEL CO., STEELTON, PA., who in December put a 2-ton Crane at their blast furnace, have just ordered a larger one for the bridge department.

ISAAC G. JOHNSON & CO., SPUYTEN DUYVIL, NEW YORK CITY, who have the finest foundry in the city, are now putting in two 5-ton Cranes.



This cut shows a 5-ton Steam-Hydraulic Crane in Foundry of Diamond State Iron Co., Wilmington, Del.

In fact, the best foundries, rolling mills and blast furnaces everywhere are putting in these Cranes, because there is no question about it at all, they are decidedly the greatest thing in the Crane line ever devised.

ELEVATORS.

We also make Elevators on this principle for taking stock to Cupola or Furnace Platforms. They have all the good features of the Steam-Hydraulic Cranes and are far superior to Hydraulic or Winding Hoists used for this purpose. They are absolutely safe and never get out of order, run for years without attention. If required to set out doors, as is frequently the case, there is no danger of freezing in the coldest climates. They are low in price and are the very best machines ever devised for doing this work.

Do not buy Cranes or Elevators before thoroughly investigating the Steam-Hydraulic System. which is being adopted by he best establishments everywhere.

CRAIG RIDGWAY & SON, - Coatesville, Penna.

THE WOODRUFF SYSTEM OF KEYING FOR MACHINERY

Does not require skilled labor to cut key way or fit key.

The peculiar way of inserting the key practically makes it part of the shaft.

A man will fit more than double the number of keys in a day than by the ordinary method.

Will save you from 50 to 75 % on the cost of your keying.

ENDORSED BY MECHANICS AND ENGINEERS.

Illustrated pamphlet containing a full description will be sent free on application

Fluor-Spar.

ILLINOIS FLUOR-SPAR & LEAD CO.

SUCCESSORS TO

MULLIN'S

FLUOR-SPAR AND LEAD MINING CO.,

57 Board of Trade Building, Chicago, Ill.

This Company owns, at Mineral City, on the Ohio River, the largest Mines of Fluor-Spar ever discovered.

We are working a large force of miners; our new mills and tram railway are running, and we are now prepared to furnish the purest Fluor-Spar in any quantities to Iron and Steel Manufacturers, to Smelters of Gold, Silver and Copper, and to Paint, Paper and Glass Makers.

Fluor-Spar is pronounced the most powerful of fluxes; it facilitates the reduction of the most refractory materials. For Alkalies, Clays and all Metallic Oxides it has a remarkable solvent power; it reduces the melting point and saves fuel; it diminishes the loss of metal, saves labor and keeps the cupola clean; reacts strongly upon scaffolds and cloggings.

One part of Fluor-Spar is more effective than ten parts of Limestone. Limestone is an enemy to iron; Fluor-Spar is a friend.

Directions for the proper use of Fluor-Spar given our patrons.

We ship Lump, Gravel, Crushed and Ground, in bulk or barrel.

ROOT'S HANDY CLOTH-BOUND HARDWARE PRICE CARDS.

COPYRIGHTED 1885.

THESE cards cover the lines having a large variety of sizes or numbers, save marking each package or article, in Retail stores, and are convenient for use in Wholesale Sample Rooms. They secure correct and uniform selling prices, for large and small buyers, save time, and are intended for years of constant use. Hence, no hardware dealer can afford to do without them, or spend the time to write and rule out cards by hand. They are printed in distinct type on the best paper, appropriately ruled with blue cross lines and red down rulings, for noting in pencil—List, Cost, Jobbing and Selling prices—as in specimen headings, shown herewith. Card A is mounted one side and B the other side of a tough, heavy card board, especially adapted for this use, protected on the edges by being *cloth-bound*, which saves framing. Two-thirds of them are 3 x 13½ inches. This size has been found convenient for hanging on a pilaster finish, or on any narrow surface, without hiding the goods. To hang or chain up each card, there is firmly inserted through the nickel-plated eyelet about ⅝ inch inside diameter. The comparative numbers of the different makers of cabinet and padlocks, rules, levels, etc., have been carefully corrected to the date of issue and many numbers added. Most houses require 6 to 12 cards extra, of each **Nos. 32 and 33**, to price lines not covered by the other numbers.

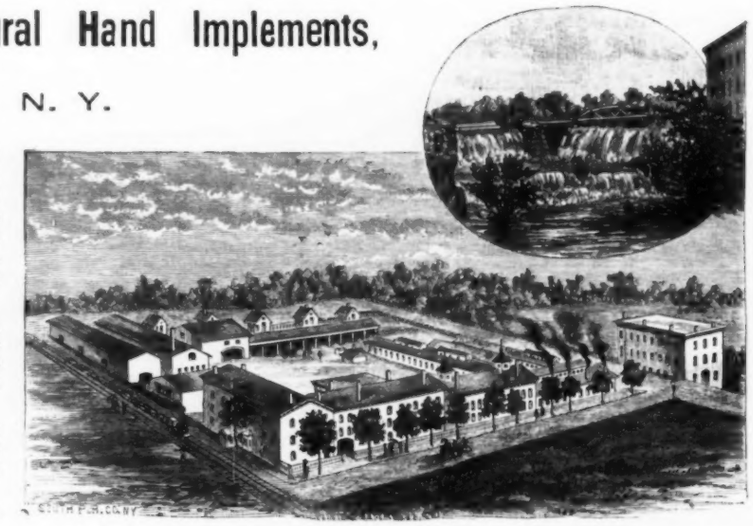
BUFFALO PUNCH AND SHEAR.

—PLANT FOR SALE.—

AUBURN MANUFACTURING CO.

Manufacturers of Agricultural Hand Implements,

AUBURN N. Y.



The Stockholders of this Company have decided to offer its manufacturing plant and machinery for sale.

The buildings surround a hollow square of several acres in extent, as shown in accompanying cut. The main buildings are substantially constructed of stone and brick, thoroughly equipped with fire extinguishing apparatus, and cover the entire frontage of the property, 350 feet.

It has magnificent water privileges, 300 Horse Power, supplemented by a modern Steam Plant of 250 Horse Power added in 1888, but scarcely used since then, as Water Power has been ample. Steam plant is in perfect condition.

The Plant is located on the line of the New York Central Railroad, as shown in cut, and but a few rods distant from Lehigh Valley Railroad, thus affording unequaled shipping facilities.

It will be offered for about one-third the original cost of construction.

Auburn is a city of about 25,000 population, and has an excellent class of labor, recruited from the surrounding farming country.

Accurate map of the premises will be furnished on application.

2 cinder carts.
Lot of furnace tools and tool iron.

H. & J. GABEL, Pottstown, Pa.

A NEW COAL FIELD AND TIMBER DISTRICT.

The **OHIO EXTENSION** of the **NORFOLK & WESTERN RAILROAD** penetrates one of the most valuable coal and timber districts in the United States. The line of this extension is 193 miles in length, from Coal Grove, Ohio, via Kenova, W. Va., to Elkhorn, W. Va., of which 54 miles, to Dunlow, W. Va., is now opened for business and the entire line is under construction and will be completed early in the fall of 1892. It passes through virgin country abounding in gas, splint, cannel, steam, coking, and domestic coals and fire-clay; chestnut-oak, white-oak, beech and poplar timber. Those looking for advantageous sites for the location of saw-mills or tanneries and establishments for the manufacture of furniture, wagons, agricultural implements, wood-pulp, fire-brick, or manufactured iron articles, should investigate the resources of this new field. The new town of Kenova, W. Va., offers many advantages for the location of manufacturing establishments, also the territory opened up by the Norfolk & Western Railroad on the north bank of the Ohio River, between Kenova, W. Va., and Portsmouth, Ohio. For the manufacture of finished iron articles the district offers unequaled advantages, with supply of coal and Pocahontas coke on short hauls, and with the blast furnaces of the Ironton, Hanging Rock and Ashland district in close proximity. Favorable freight rates made upon raw materials to all manufacturing establishments on this line.

For further information as to freight rates, maps, names of parties to whom application should be made for coal leases, &c., apply to

JOHN J. ARCHER,
Div. Freight Agent, Columbus, O.
or CHAS. G. EDDY,
Vice-President, Roanoke, Va.

TO LET.

The Engine Works at Newburgh, N. Y., at present occupied by Wm. Wright, is offered to let from May 1st, 1892

The property consists of machine shop, foundry, boiler, forge and pattern shops with a full equipment of tools.

The works are located in the heart of the City and convenient to railroad and river transportation. For terms apply to

HOMER RAMSDELL,
Newburgh, N. Y.

A MODEL AND MODERN

STOVE FOUNDRY

FOR LEASE OR SALE.

A Foundry consisting of molding room 120 x 145 feet, main building 50 x 160 feet, three stories high, engine and boiler room 25 x 50 feet, stock house 20 x 20 feet and supply and cleaning rooms 20 x 120 feet, covering in all about 34,000 square feet; the buildings are all of brick, steel roofed, and are situated at Clifton Forge, Virginia. They contain a large amount of machinery including a large lot of stove patterns especially designed for them, and with an expense of between $2000 and $3000, the plant could be put into full operation immediately.

This Foundry is most advantageously situated, being but three miles from the Longdale and Lowmoor Furnaces and but a short distance from the coal fields. Both pig iron and coal or coke can be laid down at the Foundry at the very lowest rates and a good market is ready for either stoves or the product of a general foundry business, with freight rates which will compare favorably with those of any other point. This plant will be leased at a nominal rental to reliable and responsible party who will operate it, with the privilege of purchasing in a stated period on liberal terms. Correspondence in this matter or a personal inspection of the plant is solicited. Address

LEWIS HARMAN,
General Manager, Clifton Forge, Va.

To Manufacturers

—DESIRING—

EXPORT TRADE.

Established Manufacturers' Agent, well acquainted with the Export Trade, desires agency of staple or special lines of Hardware, Agricultural Goods, &c.

Address "EXPORT TRADE,"
Box 21, office of *The Iron Age*, 96-102 Reade St., New York.

FOR DEALERS!

THE CELEBRATED

"PERFECTION"

Water Elevator and Purifying Pump.

The storage of water in cisterns and open wells is the method largely adopted throughout this country by the people for Drinking, Cooking and Bathing purposes. We have had an abundance of rainfall, all wells and cisterns are full, and such being the case we all know the water contained therein becomes FOUL and STAGNATED during the months of July, August and September. If you will place a "PERFECTION" PUMP on your well or cistern we GUARANTEE the water to become and remain as PURE as a MOUNTAIN STREAM. Try it and be convinced. It is the simplest structure for raising water on the Continent—guaranteed not to freeze.

The Perfection

Having no Valves, Tubes or Plungers to get out of order, no Wood Tubing to Pollute the water, no attachment below platform, never has to be primed, packed or thawed out. Guaranteed never to freeze; easiest pump operated. Over 140 000 in daily use.

We are now striping and decorating the "Perfection" in the finest manner possible.

Agents wanted in every town. Dealers write your jobbers for quotations. Be sure you get "The Perfection," take no other. For full information, circulars, catalogues, etc., address the manufacturers.

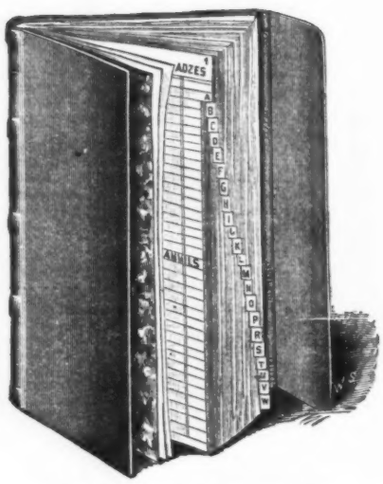
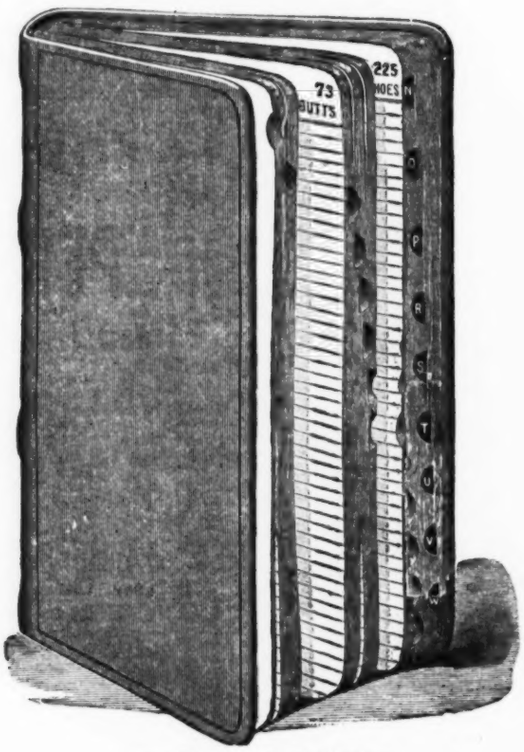
LAMBERSON'S

HARDWARE PRICE BOOKS



(POCKET EDITION.)
250 Pages. 4 x 7 inches.
Flexible Leather, with flap. Price, $4.00.



500 Pages. 6 x 9 inches.
Flexible Leather, for Office or Store Use.
Price, $8.00.

The above illustrations show the general appearance of Lamberson's Hardware Price Books.

No attempt has been made to include every article kept in any one hardware store. Assortments are so varied that no one book could be made to fit two stocks. At the same time, a very large proportion of the goods in any general hardware store are duplicated in any other similar store. The plan of this book is to arrange such goods as are regular and common to all stocks in complete alphabetical order, printing the name of each article and allowing sufficient room to add lists, weights, cost and selling prices, and such other information as the owner may desire to record. Sizes and numbers that are permanent are printed, and in some cases descriptions and comparative numbers. Experience proves that too much printing is a disadvantage, but enough to locate staple goods and make a basis to work from is a decided help. In this judicious arrangement of printing and spacing these books prove their value. The drudgery of laying out and writing in headings is done away with, and the buyer commences at once to add prices in the spaces already determined for him.

The large size is recommended for office or store use. The small book is the same in all essential points as the large one, but is made on a smaller scale for convenience of those who require a book for the pocket.

Sent, Charges Prepaid, on Receipt of the Price by

THE ART OF SELLING.

By F. B. GODDARD. 12mo. Fexible Cloth. 50 Cents.

In this book the author lets the reader into the ecrets of the accomplished and successful salesman, illustrates his tact and finesse, and tells how he masters men: but beyond this, the work embraces much information which will be instructive and useful to all classes of business men. Besides suggestions to buyers, it contains chapters on "Changes in Business Conditions and Methods," "Salesmen's Compensation." "Retail Merchants and Salesmen," "Saleswomen," 'How to Read Character," with a collection of clearly and tersely put important Legal Principles and Decisions Governing Sales. Sent, post-paid, upon receipt of price, by

DAVID WILLIAMS, Publisher & Bookseller, 96-102 Reade St., N. Y.

FOREIGN TRADE.

For upwards of 25 years we have made a specialty of introducing and selling American manufactured goods—agricultural implements, hardware, woodenware, ash, hickory and spruce handles of all kinds, patented articles, and all useful novelties generally—in the United Kingdom of Great Britain and Ireland, the Continent of Europe, Australia, South Africa, &c.

We solicit direct correspondence with American manufacturers who want their goods introduced into the above named countries.

Satisfactory references if required.

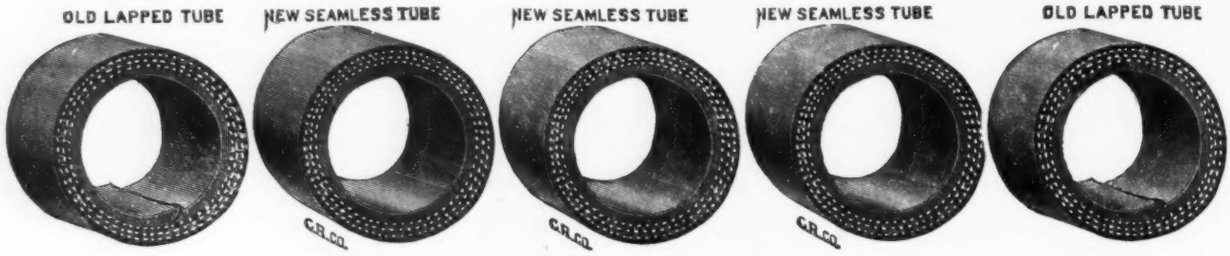
SEAMLESS TUBE HOSE.



WHO HAS NOT HAD BAD HOSE RETURNED? Who has not lost time and patience by prolonged correspondence attempting settlements for such goods? Who has not had a repetition of this sort of thing season after season, until in despair he has asked, "Is it not possible to make perfect hose?" **WHAT IS THE CAUSE?** It is the lapped seam in the tube that causes the mischief. Hose so made has a crack extending its entire length, liable to open and admit water to the duck. Compress the ends of ordinary hose and the crack will be detected; it can also be known by the uneven thickness of the tube. **WHAT IS THE REMEDY?** To buy Seamless-Tube Hose! Uniform in thickness, having no seam, no crack, no defects; water cannot get through to weaken and rot the duck, and cause it to burst under light pressures. **NO MORE BAD HOSE.** Being made by machinery, there is no variation. The tube being run like lead pipe, through a die, there is no liability to defects. All other hose is hand-made, and by piece work, where carelessness is liable to cause defects. **WHAT DOES IT COST?** While it costs more to manufacture than in the old way, yet, producing it in the large quantities we do, and desiring to introduce it extensively, we shall offer it at the same price as the ordinary lapped seam hose. **IT IS THE CHEAPEST HOSE TO BUY,** because it is worth more on merit, because it is an improvement on others, because it renders longer and better service; and because **IT IS THE EASIEST HOSE TO SELL,** for it is a new thing, its value can be easily demonstrated; its merits are apparent and readily appreciated, even by the occasional buyer. **SALES OF OVER TWO MILLION FEET** of Garden Hose alone during the past year, distributed throughout the United States, and not a single piece complained of, justifies us in guaranteeing that it will give absolute satisfaction. **WE ARE THE ONLY MANUFACTURERS OF SEAMLESS-TUBE HOSE.** We have secured Letters-Patent thoroughly covering its manufacture, and shall protect our rights against all infringements. All good things are imitated, and doubtless this will be, but as all our hose is stamped with our trade-mark, dealers can avoid liability by refusing to buy hose not bearing our brand. **MADE IN ALL SIZES AND KINDS** Garden, Engine, Steam, Fire, Brewers' and

SEE OUR GOODS.

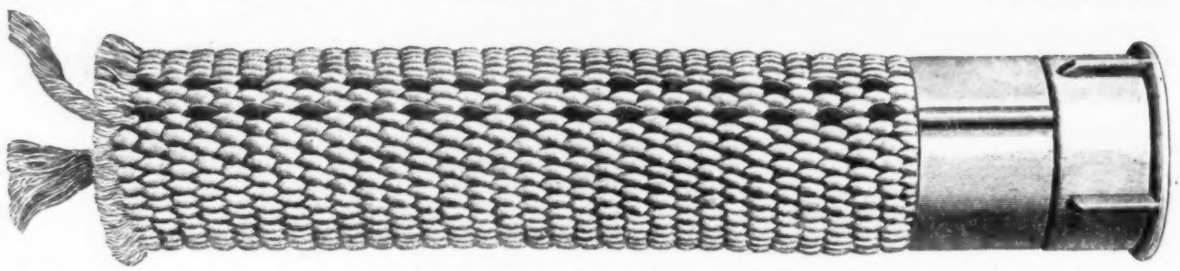
COTTON RUBBER-LINED HOSE.



We are the Largest Manufacturers in the United States of Cotton Hose and the only ones making it with a Seamless-Tube Rubber Lining.

The Fabric is the best long staple cotton, heavily and closely woven, and the hose is capable of standing enormous pressure, fully equal to the requirements of any system of water works, and with proper care it will be very durable.

WANT YOUR TRADE.
WRITE FOR CATALOGUE

The Seamless Rubber Tube is composed of excellent stock, tough and elastic, with only slight corrugations, so firmly cemented to the fabric that separation cannot occur.

Pliability. This hose is woven so as to obtain maximum strength and still leave it soft, pliable, and easy to handle, and the outside surface is not liable to become worn by friction with the ground as readily as other makes.

The Distinguishing Feature is two parallel dotted blue lines running the length of each section;—this is our trade-mark. Buy this kind and you will have the best.

25,000 Feet for WORLD'S FAIR.

We were awarded an order of 25,000 feet of 2½ inch Jacket Cotton Hose by the World's Fair Commissioners. This is the largest single order ever placed for Cotton Hose, and was given to us on the merits enumerated above.

GOODELL COMPANY,

ANTRIM, N. H.

TABLE KNIVES and FORKS in Rubber, Celluloid, Bone, Ebony, Cocobolo and Iron from the finest grade to the cheapest.

CARVERS. Our line is sufficient for any ordinary trade and consists of Genuine and Imitation Stag, Rubber, Celluloid, Bone, Ebony and Cocobolo handles in a variety of shapes and sizes. We particularly call attention to the fact that our carvers are made for use and will suit those people who want a carver that will cut.

STEELS. We make steels to match all patterns of carvers, also Butcher Steels, which are not excelled.

BUTCHER KNIVES. Cocobolo and Beech handle, all sizes, various shapes. It is entirely unnecessary to pay exorbitant prices for imported knives. Ours are sold at fair prices and are warranted equal in quality to any in the world.

Also Shoe Knives, Boning and Butter Knives, Butter Spades, Bread, Budding, Broom Knives, Can Openers, Coring and Trimming Knives, Cigar and Cheese Knives, Hunting, Kitchen, Putty, Scraping, Sheath, Sticking and Skinning Knives.

Skilled Mechanics Prefer

Tools which are not only superior in finish, but also bear a manufacturer's name which is a guarantee of accuracy and honest workmanship. When they see the stamp L. S. STARRETT, ATHOL, MASS. on a tool, that settles it—they are satisfied that it will prove exactly as represented. In fact,

Starrett's Fine Tools

Have won such an enviable reputation among the best mechanics that they are universally conceded to be THE BEST in their line in point of accuracy, workmanship, design and finish. They "take" wherever shown, and so

BURGESS
Gem Gasoline Soldering Furnaces.

All are equipped with the Cylindrical Slotted Burner.
Every Furnace guaranteed to give satisfaction.

No 3 GEM

SEE WHAT THE JOBBER SAYS.

No 4 GEM

BALTIMORE, MD., Feb. 16, 1891.

Messrs. J. BURGESS & SONS, Columbus, O.

GENTLEMEN.—We own your favor of 14th inst., asking us to express our opinion regarding the No. 3 Burgess Gem Gasoline Soldering Furnace. We tried several Gasoline Furnaces before taking hold of yours, but could not make a success selling them ; they were nearly all returned. We have sold your Furnace for several years (as you know), with perfect satisfaction to customers and ourselves; we do not remember ever having one returned. We consider them a profitable article to handle.

Yours truly, LYON, CONKLIN & CO.

ASK YOUR JOBBER FOR THEM OR WRITE US FOR RICES.

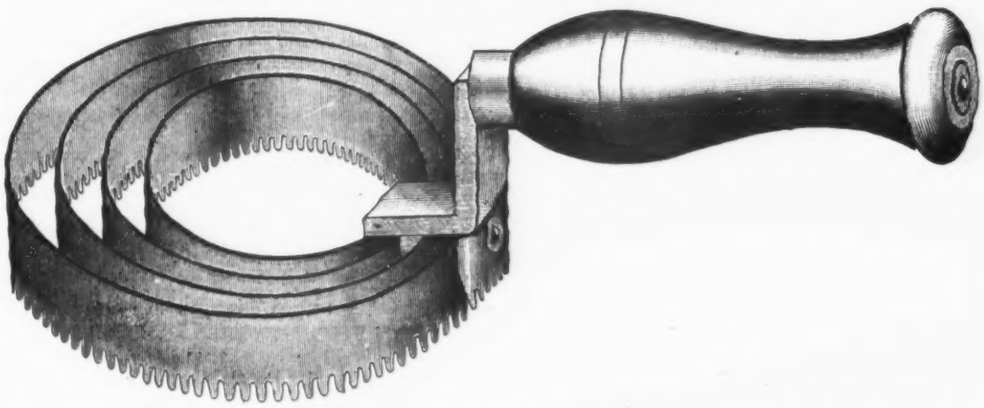
SPRING CURRY COMB.

Endorsed by the civilized world as "The only perfect curry comb."
Worth many times its cost.



Its leading position is impregnable; it positively has no weak points, either practically, mechanically or legally. Patented in the U. S, July 16, 1889; also in ten foreign countries. Endorsed and used by the United States Army. Sold by leading jobbers; bought on sight by nearly every one using curry combs, because it is the only one made from a clock spring, combining strength with flexibility, and a touch as gentle as a woman's hand, but say! how it gets there!!

SPRING CURRY COMB CO.

SOUTH BEND, IND., U. S. A.

Cronk's Steel Covered Anti-Friction Barn Door Hangers.

In our Steel Covered Hangers we have all the desirable features of the Best Hangers in the market, and with that we combine the cover for wheels SO NO ICE OR SNOW can reach the wheels, and making this cover as we do, we stiffen it so it is the strongest Hanger in the market, and we believe it is just perfect. Would be glad to have you try a small order and satisfy yourself.

Double-Braced Steel Rail.

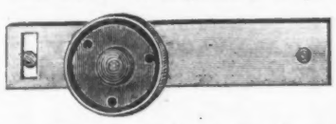
PATENTED JUNE 12, 1888.

This rail being double-braced and double-riveted is the strongest rail in the market. Being braced both ways it will not sag. The joint is made so it is perfectly solid. It comes complete and ready for use, requiring only screws and screw driver for any man or boy to put it up in short order. It can be used for any grooved wheel Hanger, and a heavy door will not make it spring or tremble. Guaranteed to hold a door weighing 2,000 pounds, and used in connection with our Anti-Friction Hanger will work perfectly on large or small doors.

Cronk's Adjustable Stay Roller.

Made of wrought steel strap; cast block with slot adjusted by loosening bolt.

Cronk's Inside Adjustable Stay.



Is cheap, simple and durable, and much better than a cleat nailed on the floor for this avoids all friction and leaves no place for dirt to accumulate. $2.00 per doz. No inside door can be properly hung without this stay.

C. E. HUBBARD, Boston Treasurer.

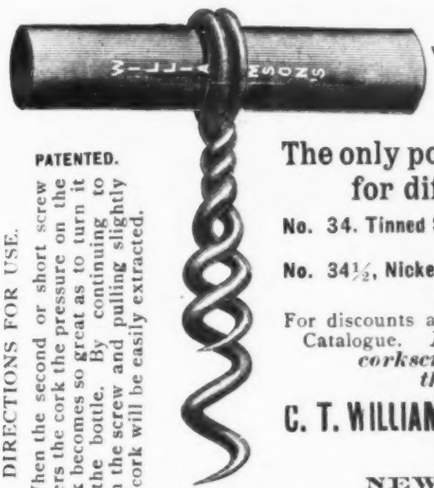
BLUE IMPROVED PROCESS LABEL

The Improved Process Glue Co., having purchased from The Le Page Co., all its patent rights, formulas, glue stock and material, and having secured control of its glue factory, machinery, etc., will continue the manufacture of Liquid Fish Glues in all the various grades heretofore offered by The Le Page Co., under the personal supervision of Mr. WM. N. LE PAGE, and under the Improved Process Patent issued October 26th, 1886. As is well known, the Improved Process by which these goods are made assures the highest strength with thorough uniformity as to quality, consistency and color. We call special attention to our **Improved Process Family Glues,** neatly put up for family use, and also to our **Improved Process Carriage Glue for wood-work,** put up in every variety of size and style. This Carriage Glue is undoubtedly the strongest and best glue for every variety of cabinet and wood-work, and has earned its high reputation. All our canned glues are put up with the **new patent cap** or fastening, patented January 22d, 1889, which has proved a great convenience and success. Our glues will be readily identified by our characteristic **Blue Label,** and the Trade-Mark shown at the head of this page. Send for Price-List. Messrs. TOWER & LYON will have charge of our New York office. Very truly yours,

THE IMPROVED PROCESS GLUE CO., New York Office, 95 Chambers St.

Williamson's Pocket Power Cork Screws

TURN THE CORKS OUT OF BOTTLES.



We Warrant every Screw Stamped

PATENTED.

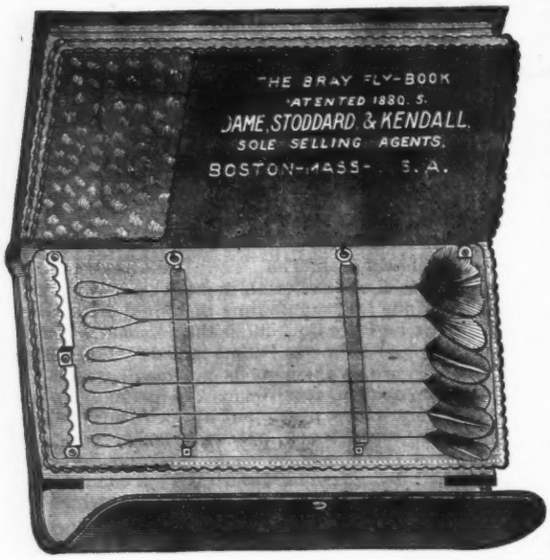
THE BRAY FLY BOOK.



THE reputation of the BRAY FLY BOOK as the neatest and most practical Fly Book made is well established everywhere. The quickness and dispatch with which Flies of any size are placed within these books without coiling of the Snell or mutilation of the Fly makes its superiority over all other methods very easily recognized by all anglers. The Flies can be as readily detached when wanted. The leaves to which the Flies are attached will in the future be made of a new material of more durability and finish than before. The workmanship and material will be kept up to highest standard, and no effort will be spared to keep the BRAY FLY BOOK (as it now is) the BEST in the WORLD.

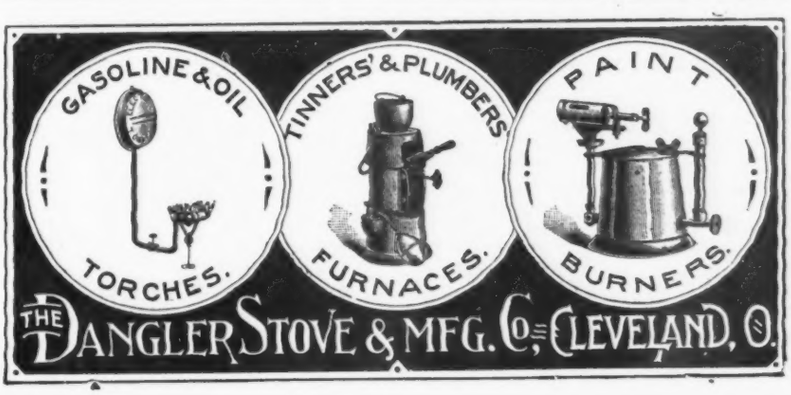
THE CINCINNATI MFG. CO., CIN., O.



Payne's Business Educator.

600 pages, bound in cloth. $2.

Every business man should have some knowledge of the State and general laws of the country, especially those affecting the collection of accounts, rates of interest, &c. He should be able to draw up many of the simpler papers, such as leases, contracts, &c. He should be familiar with the different forms of legal papers used in business, and, above all, he should be an easy and pleasant letter-writer. All these points are carefully treated in Payne's Business Educator.

Among the subjects specially discussed are:

Commercial Correspondence.—Over 150 models of letters are given, covering every phase of business correspondence.

Legal Forms Used in Business.—Articles of copartnership; notice of dissolution, form of assignment; short form of deed; bill of sale; power of attorney; lease; surety; will; notes—promissory, negotiable, non-negotiable and demand; exchange—inland and foreign; acceptance; due bill; receipt; bills of lading; private cost marks, &c.

Dictionary of Mercantile Terms.—Giving a full and clear explanation of terms used in business.

Titles.—Official, military, scholastic, naval and professional titles used in the United States

Useful Hints for Measuring Land.

Legal Rates of Interest, foreign coin weights and measures compared with American standards.

Rules for Punctuation.

Rules of Order for deliberative assemblies and debating societies.

Interest Tables, and tables of weights and measures, &c.

How to Use a Typewriter, with lessons for practice.

Exercise in Practical Penmanship.

Laws and Forms.—An epitome of the laws of the United States and of the different States of the Union, which will be found invaluable to those who are forced to appeal to the law, as well as to that large class who wish to avoid it. The whole is alphabetically arranged, so as to make reference easy. Forms are given for a great number of legal papers, &c.

Dictionary of synonyms; marks of account; list of abbreviations; French, Spanish, Latin and Italian words and phrases, &c.

Making in all the most complete self-educator published.

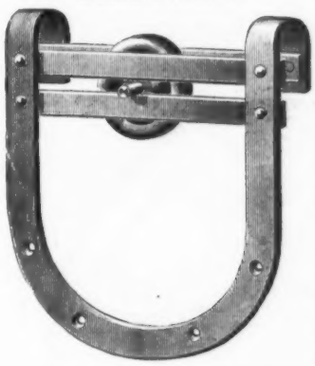
Lane's Pat. Steel Barn Door Hanger.

REMEMBER,

We were the originators of the Lane Barn Door Hangers.
All others of similar shape are but imitations.
Beware of alleged improvements and inferior goods.

"STANDARD."



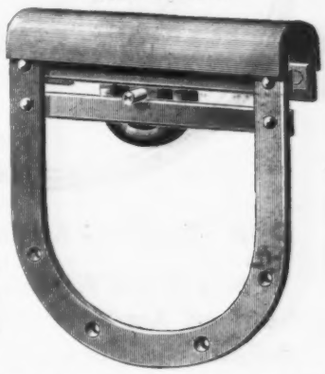
FACTS.

We use best material for all Hangers and Track, the steel being made especially for us of a quality adapted to the purpose.

Material of first quality secured—Anti-friction is a necessity—and this we accomplish by discarding the Solid box and rolling the axle along parallel ways, than which no method has been found superior.

The Lane Barn Door Hanger and Track are well known throughout the U. S., jobbers in hardware carrying them in stock as a standard article of well known merit.

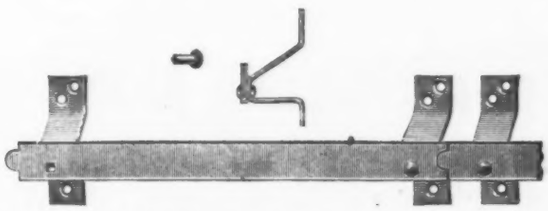
"COVERED."



If any customer prefers a Hanger with the wheels covered, we can furnish it, while preserving all the original good features which have made the "LANE" so popular.

ADVANTAGES.—We do not run the axle on the thin edges of the cover, which is sure to cause trouble—the ways or axle, one or both, becoming injured after a time of service, but we put the cap on for the use of cover alone, and place it on the outside, because, if needed to shed rain or snow, the drip will be carried beyond wheel and axle and not conducted to them. We therefore claim superiority over every other covered hanger.

LANE'S "O. N. T." TRACK.



Lane's Pat. Anti-Friction Steel Parlor Door Hanger.

The "NEVER-BREAK" Spider is the ONLY Wrought Steel Spider manufactured WITHOUT RIVETS complete from ONE PIECE OF METAL.

THE BRONSON SUPPLY CO., CLEVELAND, O., U. S. A.

Branch: 72 Beekman Street, New York.

☞ALSO A FULL LINE OF WROUGHT STEEL COOKING UTENSILS.☜

Wrought Steel Hollow Ware.

"Empire" Cold Handle Steel Spiders.

PATENTED.

The "Empire" Cold Handle Spiders are made from cold rolled wrought steel of the highest grade and finish, and are stamped from a SINGLE PIECE, and polished perfectly smooth and bright. The thickness of the steel of which the Empire Spiders are made (No. 14 Standard gauge) is a guarantee that they cannot break, bend or warp. An important feature also is that they are made without rivets, and cannot leak or the handles become loose.

The handle is reinforced in an attractive manner with a cover made of heavy tin, making a hollow ventilated handle which keeps always cool and comfortable to the hand.

The Empire SPIDERS will be found on inspection the most perfect ever made and cannot fail to give satisfaction. Our 1890 Catalogue of Patented Specialties, Acme Fry Pans, and Edgars' Patent Stove Shovels, mailed on application.

COLBY WRINGER COMPANY.

OSBORNE'S PATENT

MEAT JUICE PRESSES

PRICES:

No. 1, $1.25. No. 2, $1.75. No. 2, with clamp, $2.00. No. 3, $3.50. No. 4, $5.00. No. 5, $10.00.

DISCOUNT TO THE TRADE.

Manufactured by **H. F. OSBORNE,** Newark, N. J.

These presses are designed to extract the juice from freshly **Broiled Steak.** The yield should be about six ounces from one pound of round steak, costing from six to twelve cents. It has been found that **Beef Tea,** however made, contains no nourishment. The albumen coagulates at so low a temperature, nearly 100° below the boiling point, that it is unsafe to warm the expressed juice above the temperature of the body. Tepid water may be added, but avoid **Hot Water.** Ask your physician about it.

The Universal Lawn-Keeper.

Makes clean lawns possible with very little labor. It accomplishes more in an hour than can be done in a day by any other means. Every person having charge of a grass plot wants one.

It is a Weed Eradicator.

COMING RIGHT ALONG.

OFFICE OF
K. FITCH & CO.,
Hardware, Stoves, Tinware, etc.,
Kansas City, Mo., Jan. 15, '92.

The Sun Stamping Co., Kalamazoo, Mich.

GENTLEMEN:—Yours of the 11th, rec'd and contents noted. In reply, say, that The Morgan Broilers we sold have given so far as we have learned, good satisfaction—*not any complaint.* We have been using one in our house for more than a year, and we could not be induced to part with it for any reasonable consideration. We find it **DOES** the work as represented, when instructions are followed. It **DOES** make meat juicy and tender, and for the purposes for which it is intended, we believe it to be the most economical piece of furniture we have in the house. * * *

Very Respectfully,
K. FITCH & Co.

Perhaps there is a gentle hint here for other dealers. The "moral" would be, order a sample lot and be convinced. Unless there is gain in the transaction for you, there is none for us. Once a customer—"always."

The Morgan specialties in tin and sheet metal are manufactured solely by

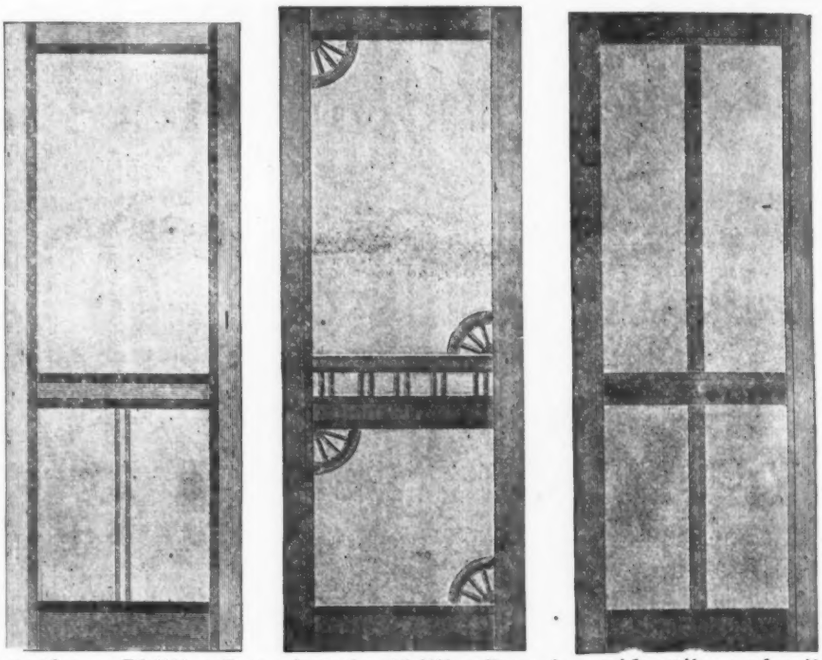
It has a Solid Rubber Ball, Nickel-Plated Trimmings, and is a durable Check which will not rack the door. Packed with simple directions for applying; complete with Screws.

—Manufactured by—

SARGENT & CO., New Haven, Conn., and New York.

SOLD BY ALL HARDWARE DEALERS.

IN REGARD TO SCREEN DOORS,



There is this to consider:

Do you wish to furnish your customer a really good article? Is not the average consumer able to distinguish between a decent door and an article poorly made, from poor stock, narrow and scanty, with rough edges and the fuzz hanging out? It is a mistake to suppose the consumer does not know anything. Put yourself in his place. A cheap door like the one described is placed before you. It can be bought for 2 whole cents less than a Phillips Door, but the Phillips Door has wide stiles and rails, is of good material, the edges are all finished, everything about it is good, and it looks as though a *man* had made it. If you were buying a door for *yourself*, the 2 cents would look *mighty small* compared with the difference in values. Why not give the consumer credit for being intelligent? He can buy a decent article somewhere else, and he will do it. Good goods always pay better margins than stuff made to "meet competition."

Phillips' ⅞ inch Doors are intended to hang on casing blocks, which are furnished. The Door overlaps the casings and does not have to be mutilated to get a fit. It thus has all the practical advantages of an *Adjustable Screen Door*. These Doors are sold by jobbers in all parts of the United States, or can be had from the factory. Send for our illustrated catalogue of Screen Goods.

A. J. PHILLIPS & CO., Fenton, Mich.

Perfection Sash Balance

Trade-Mark.

The only perfect device for balancing sash. Can be applied to any window frame and is particularly adapted for repair work as well as new buildings.

Each balance is fully warranted for ten years.

THE GIANT PAD LOCK.

Centennial Award. "Superior in Every Respect

This is one of the best selling locks in the market, and affords the dealer a large profit. It is thoroughly and strongly made—of the best material—very handsome in appearance, and every Lock is warranted. Orders solicited.

THE GIANT METAL SASH CHAIN

is a substitute for cord in hanging weights to windows. It is manufactured by us only, and by automatic machinery, patented and owned exclusively by ourselves, and whereby we secure uniformity of construction and quality. We have been to great expense in producing a metal having all the qualities and conditions requisite for making suitable chain for this purpose, and to prevent other chain of the same pattern of link and of the same general appearance, but made from an inferior metal, being offered as the same thing, we patented the word "Giant" as a Trade-Mark, as applied to either metal or chain. Trade-Mark Registered April 16, 1878, and October 22, 1878, and our metal is therefore known in the market as "Giant Metal," and our chain as "Giant Metal Sash Chain."

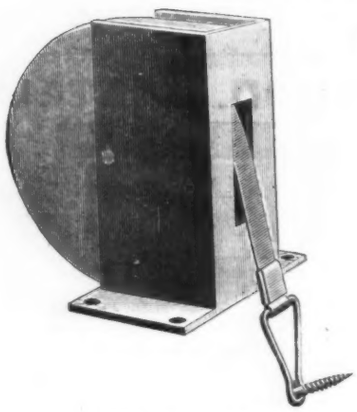
"GREATEST ACHIEVEMENT OF THE AGE."

We Stand at the Head Without a Known Competitor for SIMPLICITY, DURABILITY and CHEAPNESS.

THIS is no complication of Sash Ribbon, Pulleys, Attachments, weights, etc. It costs half the money, and lasts twice as long



WALL CASE.

WHAT WE CLAIM:

By the use of a steel frame our Balance is indestructible.

The face plate, having oval ends, can be fitted in the frame twice as fast as the old style square corners.

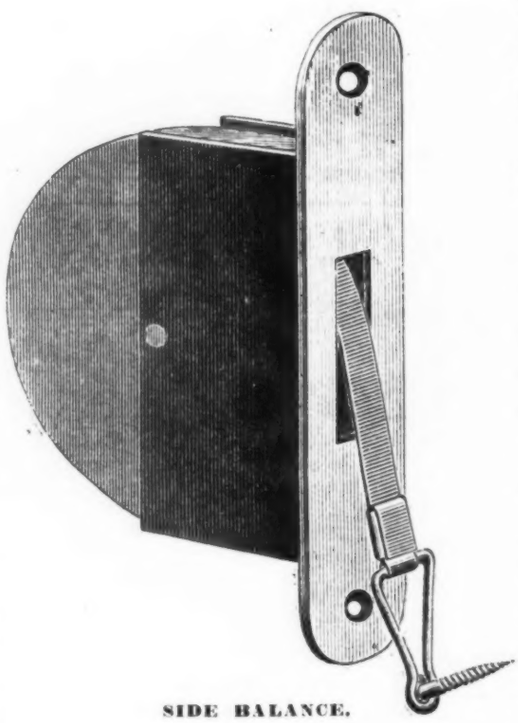
Not a screw in sight to confuse the operator.

The brake, being automatic, is operated according to the tension of the Spring in the Drum when the Tape is drawn out.

The Balance is entirely enclosed, so no dirt can get inside.

The mortise can be made with a common Cast Steel Auger Bit.

Each set of balances contains a diagram, to place on the jamb, so the operator can always bore the mortise correct and true, as well as Roger's Drive Screws, which can be driven in and revolve under a hammer blow without breaking the fibre of the wood and hold ⅓ stronger than Common Screws.



SIDE BALANCE.

We use only the finest grade of Oil Tempered Steel Springs, which are fully warranted.

Our Tape or Suspending Band is the best grade of Aluminum Bronze. Every balance is thoroughly tested before it leaves our factory and we can offer an absolutely perfect Spring Sash Balance that will exactly counterbalance the weight of the sash, lasts much longer than cotton cord, runs noiseless and has a very attractive appearance. Requiring no box frames, are adapted to old as well as new windows.

Endorsed by leading architects and railroad companies We manufacture a large variety of these goods, adapted to different work—Show Cases, Wall Cases, Refrigerators, &c.

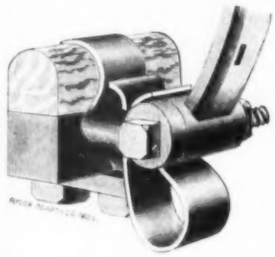
THE

Thill Coupling Spring

MADE BY THE

SABIN MACHINE COMPANY,

MONTPELIER, VERMONT,



Is unquestionably the **BEST METAL SPRING** made for the purpose of preventing the rattling of the Thills.

It is adapted to any coupling where rubbers are used. It does its work perfectly, and is so formed as not to wear the iron of the coupling, as it presents a flat, smooth surface to the bearing, and yet holds the shaft perfectly in place, and prevents all rattling.

It outlasts many sets of rubbers and costs but a trifle more. It is easily adjusted. Made in four sizes, ⅞, 1, 1⅛, and 1¼ inch. Packed one dozen pairs in a box.

SEND FOR SAMPLE DOZEN OR LARGER QUANTITIES TO

S. G. MONCE. - - BRISTOL, CONN.

IMPROVED EDITION OF THE IRON AGE

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of the Iron Age.

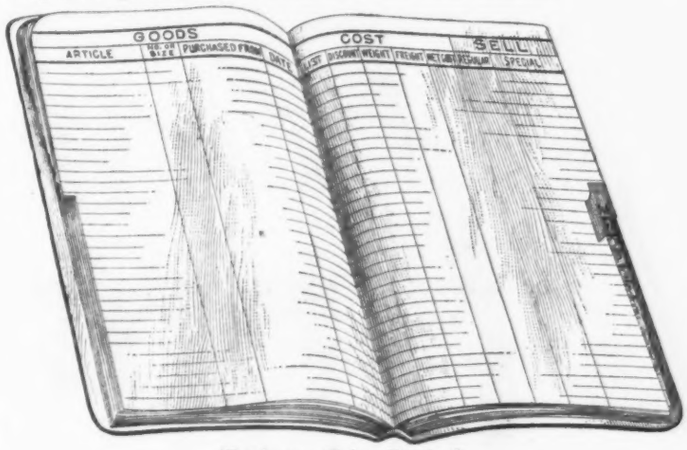
These Books are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses as an element of cost. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. This book goes into considerable detail in describing the goods and cost prices. It has been arranged in accordance with the views of many Hardwaremen whose methods are careful and exact.

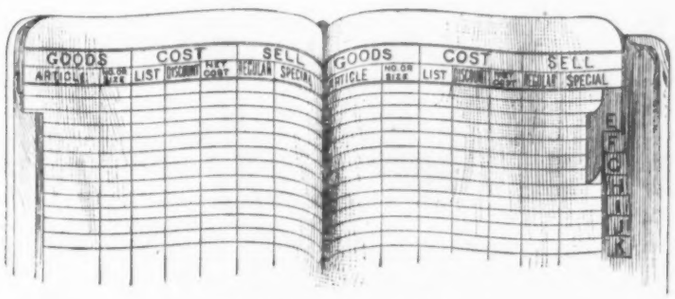
Size, 4 x 7 in.; grain seal leather.

FOUR EDITIONS:

A, 200 pages,	$1.00
A F, 200 pages with flap,	1.25
A 2, 400 pages,	1.50
A F 2, 400 pages with flap,	1.75



Hardware Price Book A.



Hardware Price Book B.

In this book each page is complete, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. It is adapted for office or store use, and by the use of familiar abbreviations, sufficiently large for the convenient and concise record of prices.

Size, 4 x 7 in.; grain seal leather.

FOUR EDITIONS:

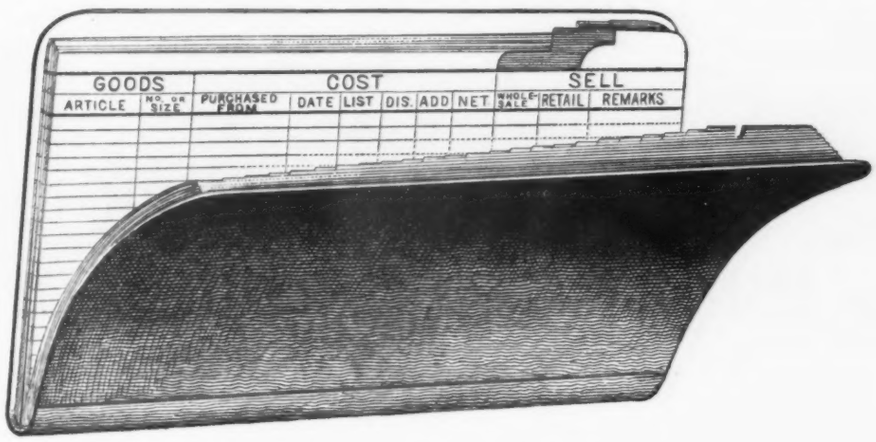
B, 200 pages	$1.00
B F, 200 pages with flap,	1.25
B 2, 400 pages,	1.50
B F 2, 400 pages with flap,	1.75

The headings in Book C run across the top, in a line parallel with the hinge. In this way a very complete record can be kept on a single page. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses which it is desirable to include in the cost. Under the selling prices space is left for the wholesale price, the retail price, and also for any remarks in regard to cost of the goods, desirability of pushing them, or other matters.

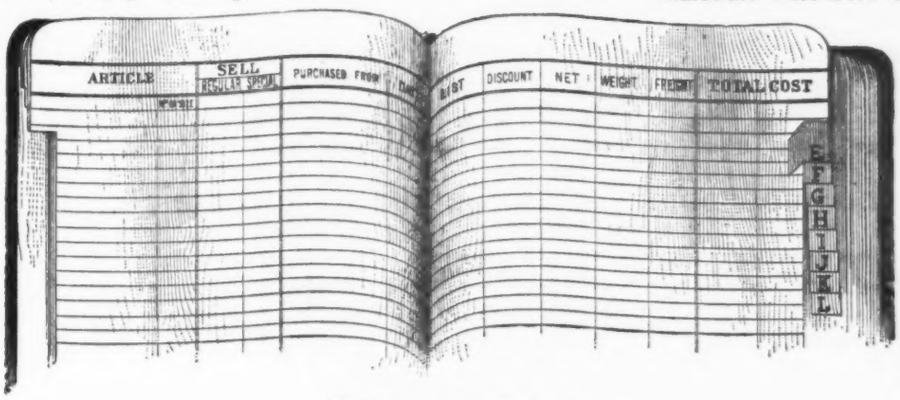
Size, 4½ x 7¾ in.; grain seal leather.

FOUR EDITIONS.

C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75



Hardware Price Book C.



Hardware Price Book D.

Price Book D will recommend itself particularly for desk and store use, and for salesmen on the road.

The name of the article, its number or size and the selling price are the first to meet the eye on the left-hand page, as embodying information desired when the selling price is required. The other headings follow in convenient order, by which a detailed memorandum regarding the goods may be kept, the whole being seen at a glance. A number of pages at the back of the book are arranged for memoranda, which will be found a great convenience. This arrangement is adapted to the requirements of the trade in this direction. Size 5¼ x 8 in.; grain seal leather.

FOUR EDITIONS.

D, 200 pages,	$2.00	D 2, 400 pages.	$3.00
D F, 200 pages, with flap,	2.50	D F 2, 400 pages, with flap,	3.50

Sent, post-paid, on receipt of price by **DAVID WILLIAMS, Publisher, 96-102 Reade St., New York.**

"RIVAL"

PATENT

Lawn Sprinkler.

Cheapest and Best in Use.

The Spray from it covers upward so/ 1000 *sq. feet of lawn.* It is the only patent adjustable Sprinkler which is adaptable to any water pressure. Being made of brass, and having no revolving parts to wear out, or small opening to clog up, it can be operated with sandy or muddy water as well as clear, and will last for years. To operate, screw Sprinkler on end of hose, stick the rod into the ground in a vertical position, adjust the acorn to suit pressure and spray wanted and it is ready for use. It may be so regulated as to throw a spray *as coarse as rain or as fine as mist*, and will make one of the most beautiful fountains imaginable. It is unequaled in merit, requires no attention and is sold at a less price than any sprinkler in the market. Remember, the RIVAL is the only Sprinkler made by which the coarseness of the spray and the area to be wet can be regulated. They are packed 1 doz. in a box, and finished either plain or nickel plated.

FULL SIZE.

The JOHN H. McGOWAN CO.

Blocks furnished equipped with grips if desired.

Dean-Whiting Elevator Co.,
140 Union St.,
WORCESTER, MASS.

"PENNSYLVANIA." "CONTINENTAL."

Beware of Imitations.

The great and unprecedented success of the PENNSYLVANIA LAWN MOWER has induced manufacturers of other Lawn Mowers to imitate our open cylinder. Not being able to use the Patents upon which our knives are formed, they all make a bungling attempt to try and accomplish the same result, in trying to secure the same cutting edge on the knives by a different-shaped edge, which after being in use a short time reduces the edge of the knife to cause great friction, and without securing the desired results.

DOUBLE GEAR.

The Cylinder Knives are solid cast steel, made by a patented process; are hardened and tempered in oil, self-sharpening, and never require a file or stone after leaving the factory. All the bearings are long, so that the wear on the Mower will be slow, and oil seldom required. It is made to run at high speed, and will not only cut higher grass, but leaves the lawn perfectly smooth.

CONTINENTAL LAWN MOWER.

ALSO

GREAT AMERICAN LAWN MOWERS,
NEW QUAKER CITY LAWN MOWERS.

There is no question for doubt that the manufacturers of above Mowers manufacture double the quantity of Lawn Mowers of any other manufacturer in the known world, and have not made their reputation from price alone but from the quality of Mowers turned out.

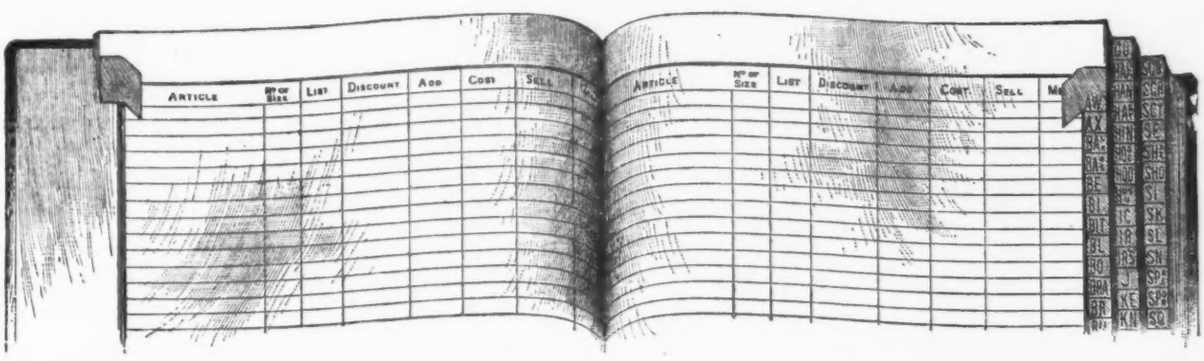
(See Alphabetical Index, Page 190.)

The Iron Age Hardware Price Book E,

WITH MULTIPLE INDEX (Patent Pending).



SIZE.—The book is 7 x 10 inches (much larger than Price Books A, B, C or D), 280 pages.

PAPER.—The paper is the celebrated Crane's heavy ledger paper, tough and strong, permitting frequent changes and erasures

BINDING.—The binding is of the very best quality—flexible seal grained leather with pocket.

INDEX.—By means of the arrangement shown in the cut the index applies to every page (except Supplement) and permits reference to any article at a single motion. This greatly facilitates the use of the book, avoiding the troublesome turning from page to page which is necessary in connection with other Price Books. It has been prepared with great care, and it is believed that it provides a place for every article in the Hardware line.

ARRANGEMENT.—The book is arranged to keep a complete record of prices on a single page, the width giving sufficient room.

SUPPLEMENT.—A 40-page Supplement is provided to give room for supplemental quotations, memoranda, tables, &c.

This book is issued in only one edition, **price $5.00.**

Bradley Hammers

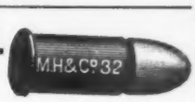
2000 IN USE.

FOR 20 YEARS these Hammers have been in the market, and during all that time have been acknowledged the very best. The material we use and our method of construction are the result of ripe experience, and not the jumped-at conclusions of amateurs. Send for circulars and price-lists.

BRADLEY & COMPANY,

SYRACUSE, N. Y.

Large Reduction in Prices.



FEBRUARY 15th.

A REVOLVER without a **LOADING GATE** is as useless all year round as a pair of **ICE CREEPERS** would be **IN JULY.**

BECAUSE all central fire cartridges are now made inside-lubricated, and will slip out of revolvers having no Loading Gate. All the X. L. Revolvers, both with Regular and Folding Hammers, have Loading Gates and Rebounding Locks.

We have largely increased our facilities for the manufacture of the X. L. Revolvers and H. & A. Automatic Ejecting Revolvers, and shall be able to fill all demands promptly this coming year. This is the best selling line ever put on the American market and retailers can double their money on these goods.

Our new illustrated catalogue, with reduced prices, will be ready on the 25th of February and will be sent upon request to any dealer.

HULBERT BROS. & CO.

Opposite Fifth Ave. Hotel. Formerly MERWIN, HULBERT & CO.,

26 West 23d Street, New York.

THE IRON AGE

The oldest paper in the world devoted to the interests of the Hardware, Iron and Metal Trades, and a standard authority on all matters relating to those branches of industry.

THE COST IS THE SAME!

THE "HARTMAN" PATENT STEEL PICKET FENCE

Costs no more than an ordinary Wood Picket Fence that obstructs the view and will rot or fall apart in a short time. The "Hartman" Fence is artistic in design, protects the grounds without concealing them and is practically **everlasting.** It is the most popular fence made to-day, its sale exceeding that of all other patent fences combined. **Illustrated Catalogue with Prices and Testimonials Mailed free.**

AMERICAN SCREW COMPANY

PROVIDENCE, R. I.

COLD FORGED PRODUCTS.

"Spur Pointed" Wood Screw.

Patented May 10, July 19, 1887; Oct. 29, 1889; Aug. 19, Oct. 21, 1890; April 7, May 12, 1891.

ITS ADVANTAGES ARE:

Stronger than a cut screw.
Forged nick.
Requires the use of only one bit.
Inserted easier.
Increased holding power.
Centralized point.
Is cold forged, and entire surface has a metallic skin.

Samples Sent on Application.

Patented Nov. 11, 1890, Oct. 20, 1891.

FLUTED TIRE BOLTS.

SEND FOR SAMPLES.

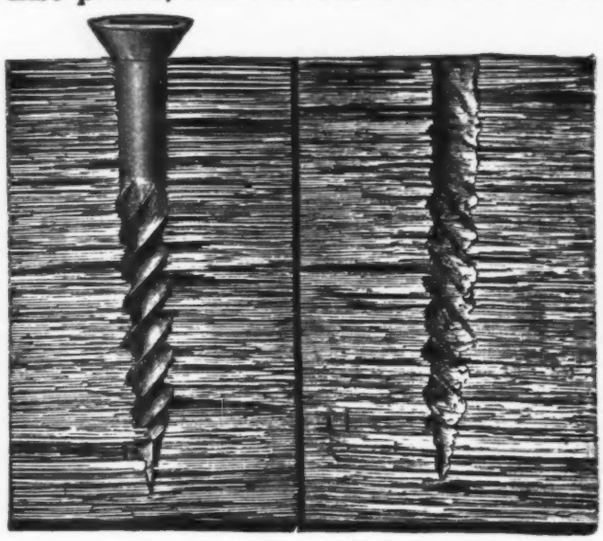
Cold Forged Coach Screws.

Patented May 10, July 19, '87; Oct. 29, '89; Aug. 19, Oct. 21, '90; Apr. 7, '91.

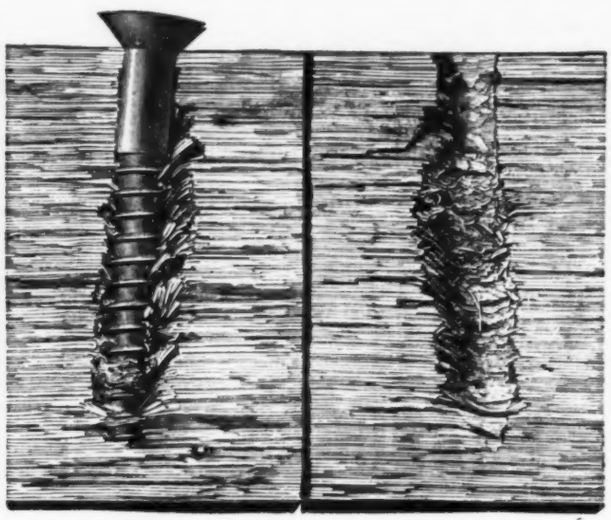
"ROGERS' DRIVE SCREWS."

Patented May 10, 1887; July 19, 1887; July 10, 1888. Other patents pending.

List prices, same as common iron wood screws. Discount for Flat Heads, 82½%



THE "ROGERS DRIVE SCREW,"
Driven with a hammer its entire length.



A COMMON CUT THREAD SCREW,
As ordinarily inserted, *i. e.*, driven two-thirds of its length with a hammer and the balance with a screw-driver. Fibres of the wood are necessarily broken, and holding power of screw much impaired.

Should be driven with a hammer its entire length.

1. Turns like a screw when driven with a hammer.
2. Holds stronger than a common screw as ordinarily inserted.
3. Does not break the fibres of the wood.
4. Cheaper than a common screw.
5. Is cold forged and has metallic skin over entire surface.

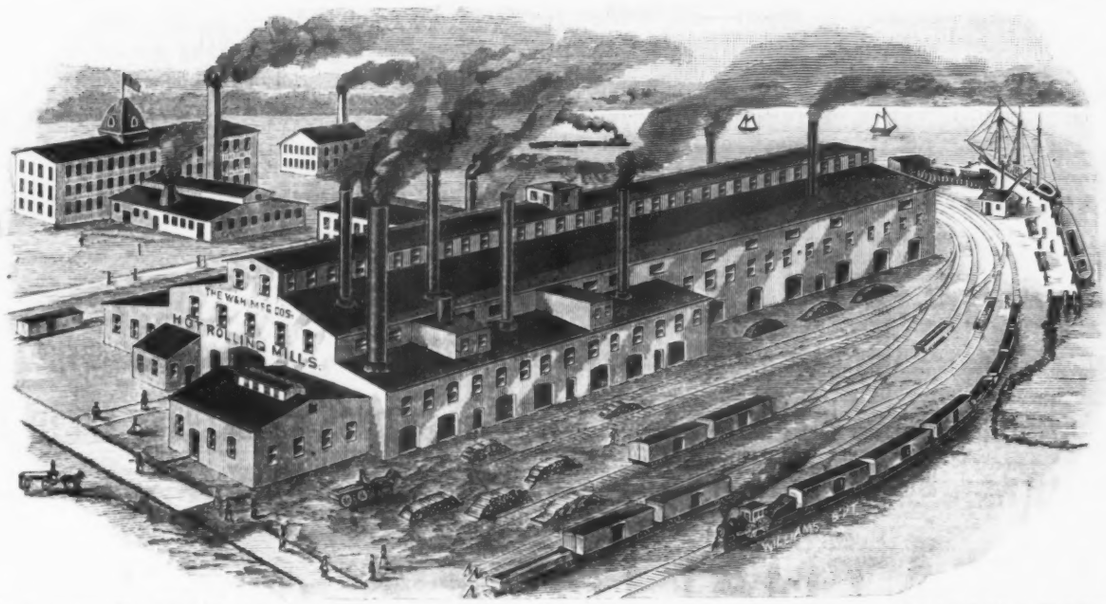
"SOFT" AND "EXTRA SOFT"

HOT ROLLED STEEL.



Having recently greatly increased our output by the purchase of the large plant of the Bridgeport Rolling Mill Co., shown in the above illustration,

WE ESPECIALLY SOLICIT ORDERS FOR

HOT ROLLED STRIP, PLATE AND BAR STEEL,

Also Special Shapes Rolled to Order,

and are prepared to make

PROMPT DELIVERIES AND LOW PRICES,

Depending upon sizes, quantity and quality needed.

ALSO THE CELEBRATED

COLD ROLLED SHEET AND STRIP STEEL

FOR PRESSED, STAMPED AND DRAWN WORK, ETC.

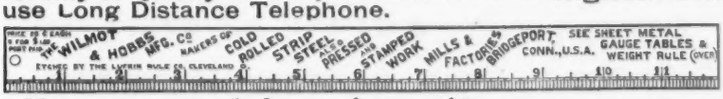
COLD ROLLING MILL.

UNEXCELLED BECAUSE OF ITS

SMOOTHNESS OF SURFACE,
ACCURACY OF GAUGE,
GENERAL UNIFORMITY,
GREAT DUCTILITY,
FREEDOM FROM GRIT.

Furnished in any width, ½ inch to 12 inches, and in lengths of 3 inches to 300 feet, also any degree of stiffness and quality of surface.

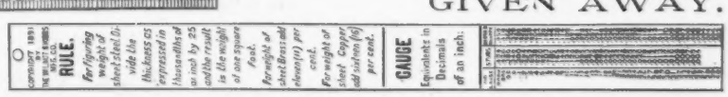
The Eastern Trade will find these Hot and Cold Rolling Mills extremely convenient, as they will not be subject to the long delays in transportation, etc., incidental to dealing with Western Mills, and Accuracy of Gauge and Width and Uniformity of Quality will always be maintained at the **Highest Standard of Excellence.** When in a hurry use Long Distance Telephone.



STEEL RULES

GIVEN AWAY.

If you use any of above, please send us this page of IRON AGE and a list of the material, mentioning size, quantity, quality generally ordered, and we will **MAIL A RULE FREE.**



BRIDGEPORT, - - - - - CONN.

STEAM PLANTS.—Before purchasing any **FEED WATER HEATER and PURIFIER**, or deciding upon the adoption of any **System of Steam Heating**, kindly send us postal, and we will send one of our representatives, at our expense, to call upon you personally, in order to explain advantages which we guarantee over all others.

WEBSTER'S "VACUUM" FEED WATER HEATER AND PURIFIER.

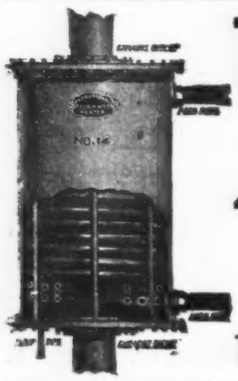
Sizes from 30 to 2,500 horse-power carried in stock. Over 125,000 horse-power in daily use in the largest steam plants in the United States. *Send for Catalogue.* **CARDINAL POINTS.**—Highest temperature, purest feed water upon least quantity of exhaust steam, free exhaust to atmosphere, between engine and heater.

"WILLIAMES' VACUUM SYSTEM OF STEAM HEATING."

Without Back Pressure upon the Engine Guaranteed.—*Patent sustained in two Suits in the United States Circuit Court.* Adopted by 300 of the largest Factories, Mills, Electric Light Companies, Market Houses, Office Buildings, Schools, Theatres, Churches and Railroad Stations. *Send for Catalogue.*

ADVANTAGES.—Free exhaust to atmosphere, relief of back pressure, saving power, water of condensation, increasing efficiency of heating system, saving from 10 to 40 per ct. of fuel. Exact percentage can be determined after making examination of steam plant.—**ALL INFRINGERS WILL BE PROSECUTED.**

Can be attached to any steam plant. Furnished upon trial under guarantee. WARREN WEBSTER & CO., Main Office & Works, 491 N. 3d St., Philad'a.



The National Feed Water Heater.

A BRASS COIL HEATER delivering Water to the Boilers at 212° Fahrenheit.

400,000 HORSE POWER NOW IN USE.

PRICES LOW. SATISFACTION UNIVERSAL.

Also **COILS** and **BENDS** of IRON, BRASS and COPPER PIPE.

THE NATIONAL PIPE BENDING CO., 98 RIVER ST., NEW HAVEN, CONN.

Seibert Cylinder Oil Cup Co.,

A53 Oliver St., Boston, Mass., U. S. A.

Manufacturers of Patent Automatic Sight Feed Lubricators under the Gates and Seibert Patents.

By their use oil is seen passing in drops to cylinders and valves, which are perfectly lubricated, making a large gain in power and saving in coal

N. B.—Infringers will be prosecuted.

AUTOMATIC REGISTER.

The most accurate and reliable counter manufactured. Made entirely of metal.

Handsomely finished. Can be used on any machine. Send for circular.

PATENT CENTRIFUGAL GRINDING MACHINES.

This cut shows our Horizontal Double Grinder. It is adapted to Machinists' tool grinding and carries two wheels, one at each end of arbor. The water is carried to wheels from tank by head force, and back again into tank by centrifugal force, keeping a continuous circulation as long as enough water is kept in tank to cover supply pipes. It is guaranteed to do accurate work without drawing of temper. Circulars and price on application.

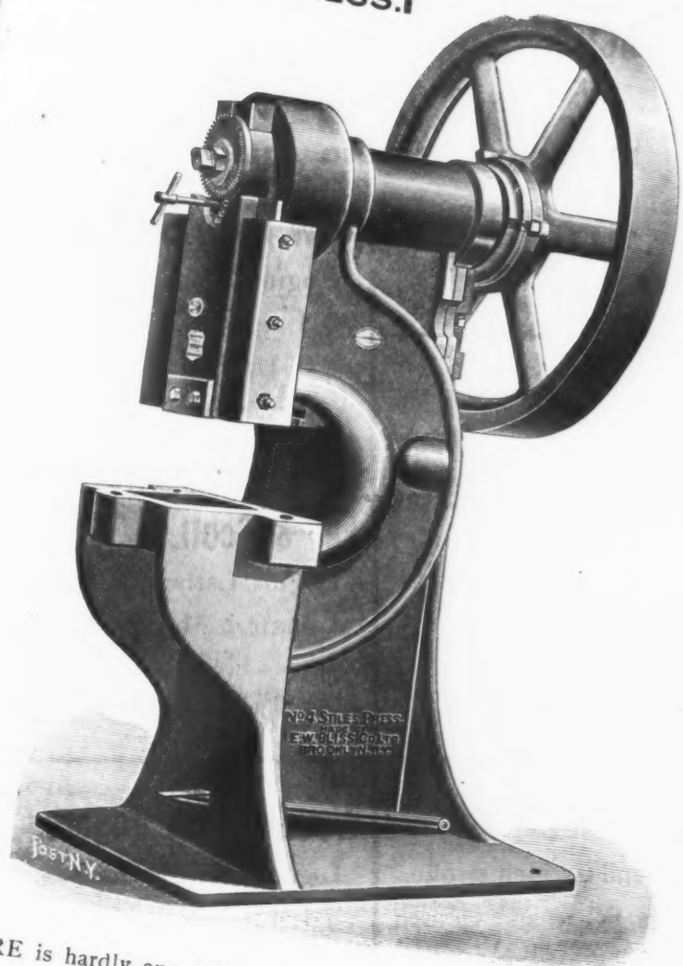
This is a page from our new SECTIONAL CATALOGUE. If you want Presses, Dies, Shears or Machinery for working sheet metal write to us.

E. W. BLISS CO. (Ltd.), BROOKLYN, N. Y.

No. 4 STILES PRESS.



THERE is hardly any other style of power press that has met with such general favor among manufacturers of articles requiring heavy punching as the line of Stiles Power Punching Presses which we designate by the numbers of **0** to **5½**. Nearly all the best manufacturing establishments in this line in America, and many in Europe, employ one or several of these presses. The range of work for which they are adapted covers nearly every kind of blanking, punching, perforating, forming and bending, including a large proportion of the operations needed in the manufacture of hardware, locks, cutlery, guns, sewing machines, typewriters, and many other articles made out of sheet metal.

We make the Stiles Drop Hammers, Forging and Punching Presses and Machinery for Hardware Manufacturers, etc., etc.

THE WORLD'S CHAMPION

New Upright Self Feed

1891 Pattern $10 Post Drill.

This Drill is Double Back Geared, can be changed from slow to fast speed, weighs 120 pounds, drills from 1/8 to 1 1/4 inch hole, and to center of 14 1/2-inch circle, designed for general blacksmith work. The diameter of the spindle is 1 1/8 inch, length 13 inches, the screw having a run up and down of 4 inches. The crank can be shifted from shaft A to shaft B (or balance wheel shaft), thus increasing the power two and one-half times for heavy work. Shaft A for lighter work and faster speed. The change can be made in an instant from fast to slow speed. This Drill is supplied with an improved Automatic Self-feed. The drill is mounted on a hardwood 2-inch plank, 50 inches long, 6 inches wide, and not backed up by an extra addition of wood in order to increase the swing, which is often done to save iron and thus weakens the drill where it should be the strongest. The Drill is warranted in every respect and has the words cast thereon, "Every Drill Warranted." The spindle is bored to take 1/2-inch straight shank drills, but if specially ordered will be bored to take in 5/8 or 41-64, without extra charge.

Systematic Mineralogy, based on a natural classification, with a general introduction. By T. STERRY HUNT, M.A., LL.D. The author's aim is to reconcile the rival and hitherto opposed chemical and natural historical methods in mineralogy, showing that when rightly understood, chemical and physical characters are really dependent on each other and present two aspects of the same problem, which can be solved only by the consideration of both. He has devised and adopted a Latin momenclature and arranged the mineral kingdom in classes, orders, genera and species, the designations of the latter being binomical. 391 pages, cloth.....$5.00

For sale by David Williams, 96-102 Reade St., N. Y

Cut shows 5-ton Ridgway Crane in Foundry, Diamond State Iron Co., Wilmington, Del.

Far Superior to Usual Hydraulic.

No pumps. No accumulator. No shocks. None of that everlasting bother with valves and packings. None of that awful waste of power. No freezing. Not touched from one year's end to the other.

Attached to any steam supply is ready for business at once. Uses so little steam it is never missed. The greenest help works it. Absolutely safe. Being balanced is easy on buildings and takes small foundation. So cheap any plant can use it. Always earns its cost in a few months.

In these days of close prices you can't afford to move goods by hand. The best plants are getting them. Look at the list. Only a new machine, too! It is the only kind of crane for you to get. It is safe to follow the most able and successful steel and iron makers. The largest concerns in Europe are also getting them from our Belgium factory. It is the Crane of Cranes.

THE GREATEST FOUNDRY CRANE KNOWN.

THE WOODRUFF SYSTEM OF KEYING FOR MACHINERY

Does not require skilled labor to cut key way or fit key.

The peculiar way of inserting the key practically makes it part of the shaft.

A man will fit more than double the number of keys in a day than by the ordinary method.

Will save you from 50 to 75 % on the cost of your keying.

ENDORSED BY MECHANICS AND ENGINEERS.

Illustrated pamphlet containing a full description will be sent free on application.

THE WOODRUFF MFG. CO., Hartford, Conn.

STEAM BOILERS.

Their Management and Working on Land and Sea. Thirty Years' Experience.

By JAMES PEATTIE.

Synopsis of Contents.—Water. Coal. Combustion. Scale Analysis. Scale Formation. Blowing Practice. Furnace Collapse. Priming. Feed. Blowing Out Water. Expansion of Boilers. Superheating. Furnaces. Firing. Draught. Dampers. Safety-Valves. Corrosion. Leaky Tubes. Boiler Repairs. Pressure Tests. Explosions.

Written in the plain language of the workshop and engine-room, and intended for engineers and firemen in charge of Steam Boilers.

230 Pages, with Illustrations. Cloth, $2.00.

Sent, postpaid, on receipt of Price, by

Every Furnace guaranteed to give satisfaction.

№ 3 GEM

SEE WHAT THE JOBBER SAYS.

№ 4 GEM

BALTIMORE, MD., Feb. 16, 1891.

Messrs. J. BURGESS & SONS, Columbus, O.

GENTLEMEN.—We own your favor of 14th inst., asking us to express our opinion regarding the No. 3 Burgess Gem Gasoline Soldering Furnace. We tried several Gasoline Furnaces before taking hold of yours, but could not make a success selling them; they were nearly all returned. We have sold your Furnace for several years (as you know), with perfect satisfaction to customers and ourselves; we do not remember ever having one returned. We consider them a profitable article to handle.

Yours truly, LYON, CONKLIN & CO.

NEW BEDFORD IRON FOUNDRY,
New Bedford, Mass.

A NEW COAL FIELD AND TIMBER DISTRICT.

The **OHIO EXTENSION** of the **NORFOLK & WESTERN RAILROAD** penetrates one of the most valuable coal and timber districts in the United States. The line of this extension is 193 miles in length, from Coal Grove, Ohio, via Kenova, W. Va., to Elkhorn, W. Va., of which 54 miles, to Dunlow, W. Va., is now opened for business and the entire line is under construction and will be completed early in the fall of 1892. It passes through virgin country abounding in gas, splint, cannel, steam, coking, and domestic coals and fire-clay; chestnut-oak, white-oak, beech and poplar timber. Those looking for advantageous sites for the location of saw-mills or tanneries and establishments for the manufacture of furniture, wagons, agricultural implements, wood-pulp, fire-brick, or manufactured iron articles, should investigate the resources of this new field. The new town of Kenova, W. Va., offers many advantages for the location of manufacturing establishments, also the territory opened up by the Norfolk & Western Railroad on the north bank of the Ohio River, between Kenova, W. Va., and Portsmouth, Ohio. For the manufacture of finished iron articles the district offers unequaled advantages, with supply of coal and Pocahontas coke on short hauls, and with the blast furnaces of the Ironton, Hanging Rock and Ashland district in close proximity. Favorable freight rates made upon raw materials to all manufacturing establishments on this line.

For further information as to freight rates, maps, names of parties to whom application should be made for coal leases, &c., apply to

JOHN J. ARCHER,
Div. Freight Agent, Columbus, O.
or CHAS. G. EDDY,
Vice-President, Roanoke, Va.

A MODEL AND MODERN

STOVE FOUNDRY

FOR LEASE OR SALE.

A Foundry consisting of molding room 120 x 145 feet, main building 50 x 160 feet, three stories high, engine and boiler room 25 x 50 feet, stock house 20 x 20 feet and supply and cleaning rooms 20 x 120 feet, covering in all about 34,000 square feet; the buildings are all of brick, steel roofed, and are situated at Clifton Forge, Virginia. They contain a large amount of machinery including a large lot of stove patterns especially designed for them, and with an expense of between $2000 and $3000, the plant could be put into full operation immediately.

This Foundry is most advantageously situated, being but three miles from the Longdale and Lowmoor Furnaces and but a short distance from the coal fields. Both pig iron and coal or coke can be had down at the Foundry at the very lowest rates and a good market is ready for either stoves or the product of a general foundry business, with freight rates which will compare favorably with those of any other point. This plant will be leased at a nominal rental to reliable and responsible party who will operate it, with the privilege of purchasing in a stated period on liberal terms. Correspondence in this matter or a personal inspection of the plant is solicited. Address

LEWIS HARMAN,
General Manager, Clifton Forge, Va.

AGENTS IN ALL PARTS of the country visiting the Hardware and Implement trade to appoint local dealers agents for a good line of goods; liberal commission; in answering state territory covered. Address OSGOOD & Co., Binghamton, N. Y.

THE LATEST BOOKS.

Notes and Examples in Mechanics; with an appendix on the Graphical Statics of Mechanism. By IRVING P. CHURCH, C. E. This forms a companion volume to the writer's "Mechanics of Engineering" and contains varous notes and many practical examples, both algebraic and numerical, serving to illustrate more fully the application of fundamental principles in mechanics of solids; together with a few paragraphs relating to the mechanics of materials and an appendix on the "Graphical Statics of Mechanism." 146 pages and plates, cloth.... ... .$2.00

Safety Valves: their History, Invention, Antecedants and Calculations. By W. B. LEVAN. Illustrated pocket-book style, cloth $1.50; leather $2.00

Practical Carriage Building. A collection of articles compiled from those contributed to the columns of *The Blacksmith and Wheelwright* during the past few years, and covering the entire range of the art of carriage building from the plan of a vehicle to its completion, illustrating and describing fully the sectional parts. Edited by M. T. RICHARDSON. Beginning with some remarks on the proper timbers to use, plans for a carriage shop are described and illustrated; then come the tools, floor, bench and wood-working appliances necessary for a successful shop. Following this is a chapter on wheels and the repairing of wheels, and then are described and illustrated mortises, laps, gather of wheels, plumb spoke, etc. Illustrated, Vol. I, 224 pages, cloth.....$1.00

Ways and Means for Machinists, Metal Workers, Model Makers, Watch and Tool Makers, Jewelers, Draftsmen, etc. Being a collection of hints and helps not found in books usually written for this class of artisans. By A. H. CLEAVES, M.E. 125 illustrations, 158 pages, cloth $1.00

Mineral and Railway Map of Southwest Virginia and Contiguous Territory. The position of Southwest Virginia, Eastern Tennessee, West North Carolina, East Kentucky, and part of West virginia ores, coal areas, furnaces, collieries, manufactures, railways, roads, streams, mountains, towns and their population, leading industries, agricultural and pastoral belts, and the scientific and economic geology; iron, manganese, coal, zinc, lead, copper, sulphur, tin, gold, marble, slate and lithographic stone, are all shown on Boyd's Map of the Mineral Resources and Railway Facilities of Southwest Virginia and Contiguous Territory. This map extends from East of Roanoke, Lynchburg, Staunton and Danville, westward to Knoxville, Asheville, Cumberland Gap and Ohio River, Kenova and Cincinnati: a region unexampled in the progress of its safe mineral developement. Map is on a scale of six miles to an inch for its greater part. On cloth, pocket form, 21st edition..... .....$5.00

Workshop Receipts. (Fifth Series.) In adding a fifth volume, the range of subjects has been widened, and the information conveyed in earlier volumes has been supplemented by the results of most recent investigations and experiments, thus bringing the whole series well up to date. CONTENTS: Diamond Cutting and Polishing; Label; Laboratory Apparatus; Cements and Lutes; Cooling, Copying, Dessicating, Distilling, Evaporating, Illuminating Agents; Filtering; Explosives; Fire proofing; Ink; Lacquers; Magic Lanterns; Electrics; Metal Work; Musical Instruments; Packing and Storing; Percolating; Preserving, Corrosion and Protection of Metal Surfaces; Pumps and Syphons; Water-proofing; Glass Manipulating; Modeling and Plaster Casting; Stereotyping; Tobacco Pipes; Taps; Tying and Splicing Tackle; Velocipedes; Repairing Books; Netting; Walking Sticks; Boat Building; Anemometers; Measuring Angles; Barometers; Camera Lucida; Dendrometers. 8vo, 440 pages, fully illustrated, cloth... .. ..$2.00

The Iron Founder: A comprehensive treatise on the art of molding, including chapters on core-making, loam, dry-sand, and green-sand molding; also crystallization, shrinkage, and contraction of cast iron, and a full explanation of the science of pressures in molds; added to which are formulæ for mixtures of iron, tables, rules, and miscellaneous information. By SIMPSON BOLLAND, Practical Molder and Manager of Foundries. Over 300 illustrations, 382 pages, cloth $2.50

A Treatise on Metalliferous Minerals and Mining. By D. C. DAVIES, M.E., F.G.S. fifth edition, thoroughly revised and much enlarged, with about 150 illustrations. CONTENTS: Materials of which the Earth is Made; Classification of the Deposits of Metalliferous Minerals; Metallic Contents of Lodes; Second, Third and Fourth Classes of Mineral Deposits; six chapters on Gold; three chapters on Silver; six chapters on Copper; three chapters on Tin; four chapters on Lead; one chapter on Zinc; three chapters on Iron; Various Metals; On the Discovery and Proving of Mines; four chapters on the Working of Metalliferous Mines; two chapters on the Dressing of Metallic Ores; Hydraulic Gold Mining; Sundry Particulars of Work and Costs; On the Treatment of Zinciferous Ores; On the Sale and Sampling of Lead Ores; General Considerations; Glossary of Words and Terms. 524 pages, cloth.....$5.00

Fluor-Spar.

ILLINOIS FLUOR-SPAR & LEAD CO.

SUCCESSORS TO

MULLIN'S

FLUOR-SPAR AND LEAD MINING CO.,

57 Board of Trade Building, Chicago, Ill.

This Company owns, at Mineral City, on the Ohio River, the largest Mines of Fluor-Spar ever discovered.

We are working a large force of miners; our new mills and tram railway are running, and we are now prepared to furnish the purest Fluor-Spar in any quantities to Iron and Steel Manufacturers, to Smelters of Gold, Silver and Copper, and to Paint, Paper and Glass Makers.

Fluor-Spar is pronounced the most powerful of fluxes; it facilitates the reduction of the most refractory materials. For Alkalies, Clays and all Metallic Oxides it has a remarkable solvent power; it reduces the melting point and saves fuel; it diminishes the loss of metal, saves labor and keeps the cupola clean; reacts strongly upon scaffolds and cloggings.

One part of Fluor-Spar is more effective than ten parts of Limestone. Limestone is an enemy to iron; Fluor-Spar is a friend.

Directions for the proper use of Fluor-Spar given our patrons.

We ship Lump, Gravel, Crushed and Ground, in bulk or barrel.

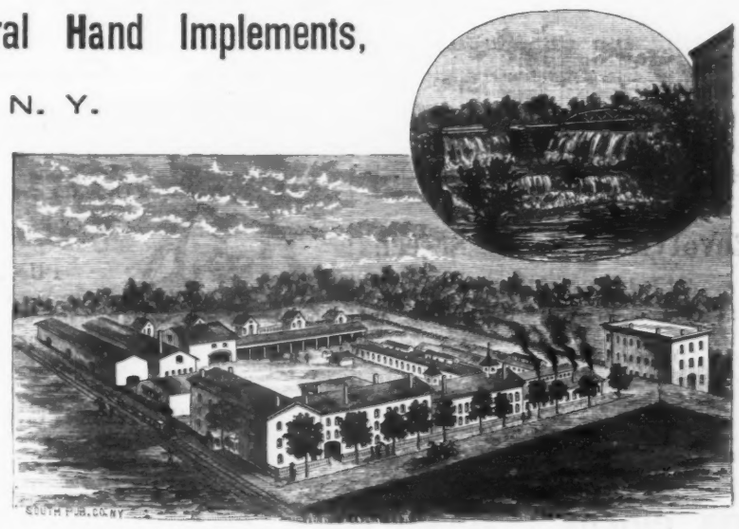
—PLANT FOR SALE.—

AUBURN MANUFACTURING CO.

Manufacturers of Agricultural Hand Implements,

AUBURN N. Y.



The Stockholders of this Company have decided to offer its manufacturing plant and machinery for sale.

The buildings surround a hollow square of several acres in extent, as shown in accompanying cut. The main buildings are substantially constructed of stone and brick, thoroughly equipped with fire extinguishing apparatus, and cover the entire frontage of the property, 350 feet.

It has magnificent water privileges, 300 Horse Power, supplemented by a modern Steam Plant of 250 Horse Power added in 1888, but scarcely used since then, as Water Power has been ample. Steam plant is in perfect condition.

The Plant is located on the line of the New York Central Railroad, as shown in cut, and but a few rods distant from Lehigh Valley Railroad, thus affording unequaled shipping facilities.

It will be offered for about one-third the original cost of construction.

Auburn is a city of about 25,000 population, and has an excellent class of labor, recruited from the surrounding farming country.

Accurate map of the premises will be furnished on application.

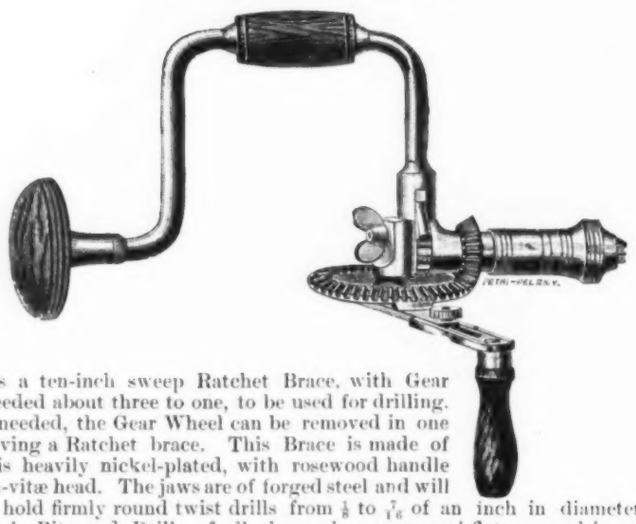
DRILL BRACE,

ANTI-FRICTION COLLAR.



This is a ten-inch sweep Ratchet Brace, with Gear Wheels speeded about three to one, to be used for drilling. When not needed, the Gear Wheel can be removed in one second, leaving a Ratchet brace. This Brace is made of steel and is heavily nickel-plated, with rosewood handle and lignum-vitæ head. The jaws are of forged steel and will center and hold firmly round twist drills from $\frac{1}{8}$ to $\frac{7}{16}$ of an inch in diameter. Also square shank Bits and Drills of all sizes; also square and flat screw-driver Bits; in fact, it will hold perfectly tool shanks of any size or shape. There is no other chuck in existence which will do this. It is our purpose to furnish everything in the line of Bit Braces and Breast and Hand Drills of a style and quality superior to anything else in the market. With each Drill Brace we send an extra set of Forged Steel Jaws, mainly to be used for round twist drills less than one-eighth of an inch in diameter. As will be noticed in the cut, the large gear wheel has an extension handle to give it more power when needed.

Price of Drill Brace, complete, per doz., $36 00. Same discount as Breast Drills.

LePage's Liquid Glue

MENDS EVERYTHING.

Every Dealer Should Carry it in Stock.

It is the Standard of Excellence and the Strongest Adhesive known.

Liberal advertising and legitimate methods have created a demand for

LEPAGE'S GLUE,

which its unequaled merit is continually increasing.

IT CONTAINS NO ACID.

IT SELLS FASTEST

AND IT IS

THE BEST.

Order a sample assortment and secure free a handsome Display Stand for your counter.

Beware of Infringements and Accept no Substitutes.

☞ You have no time to waste in fruitless efforts to convince your customers that something else is as good as "Le Page's."

FOR DEALERS!

THE CELEBRATED

"PERFECTION"

Water Elevator and Purifying Pump.

The storage of water in cisterns and open wells is the method largely adopted throughout this country by the people for Drinking, Cooking and Bathing purposes. We have had an abundance of rainfall, all wells and cisterns are full, and such being the case we all know the water contained therein becomes FOUL and STAGNATED during the months of July, August and September. If you will place a "PERFECTION" PUMP on your well or cistern we GUARANTEE the water to become and remain as PURE as a MOUNTAIN STREAM. Try it and be convinced. It is the simplest structure for raising water on the Continent—guaranteed not to freeze.

The Perfection

Having no Valves, Tubes or Plungers to get out of order, no Wood Tubing to Pollute the water, no attachment below platform, never has to be primed, packed or thawed out. Guaranteed never to freeze; easiest pump operated. Over 140 000 in daily use.

We are now striping and decorating the "Perfection" in the finest manner possible.

Agents wanted in every town. Dealers write your jobbers for quotations. Be sure you get "The Perfection," take no other. For full information, circulars, catalogues, etc., address the manufacturers.

No More Leaky Sky Lights

Or Slipping and Breaking of Glass in Green Houses or Farmer's Sash. You can save money and glass by using the

PATENT GLAZIER Twin Points.

THESE POINTS are far superior to the old mode of setting glass, as they will hold each pane in place, preventing the glass from slipping and causing binding and cracking. Each box contains 500 rights and 500 lefts. We also make a tool for driving the points. **Price. 35c a Box. Driver, 15c. A Liberal Discount to the Trade.**

These points are kept by all prominent Hardware, Paint, Oil, Seedsmen, and Florist Supply Stores in the country. If you do not find them, send postal for a free sample, or send 69 cents for 1 package and 1 driver by mail, post paid to any part of the U. S.

H. W. EAMES CO., Milford, Mass.,

IT PAYS. Nothing about a Hardware Store looks so well as clean shelves and the goods neatly Boxed with a fresh sample on the front. Customers are attracted by such a display of care, and notice and buy things that would ordinarily go without notice. The Boxes are inexpensive, save the goods, make a big show for a small investment and help the salesmen. Send to

JESSE JONES & CO., Philadelphia,

for Catalogue of prices, styles and references.

E. C. ATKINS & CO., Indianapolis Indiana.

The Famous "Dexter."

Second only to the Silver Steel Diamond, and equal to it when made of the same class of steel, is the **Patent Concaved Tooth Dexter.** The patent by which this saw is protected consists of a depression of the face of the cutting teeth through the centre from point to base, thus removing all friction while in use, giving strength and stiffness to the teeth and increasing threefold the durability of the "set." This saw never fails to give the best satisfaction.

ATKINS ALWAYS AHEAD. AAA E.C.ATKINS & CO. INDIANAPOLIS, IND. TRADE MARK

Arranged to be held by Thumb and Little Finger (the natural way of holding a comb).

CAUTION.

This Comb is secured to us by Letters Patent No. 464,773, dated December 8th, 1891, and we have secured control of Patent No. 220,986, dated October 28th, 1879, issued to Paschal Plant, together with all accrued claims for infringement of said Letters Patent. We hereby CAUTION all parties against MAKING, SELLING or BUYING Curry Combs that in any manner infringe these Patents. The said Patent No. 220,986 is the BOTTOM PATENT to FLEXIBLE or SPRING Curry Combs. The "claim" thereof reads as follows: "As a new article of manufacture, a flexible Curry Comb formed of a toothed strip of metal or other suitable material, without a plate or back, and with a suitable handle attached directly to the strip, substantially as described." Parties MAKING, SELLING or BUYING FLEXIBLE or SPRING Curry Combs not licensed by us under the above-mentioned Patent are liable to damages, and we shall proceed against them as fast as possible.

THE BRAY FLY BOOK.

THE reputation of the BRAY FLY BOOK as the neatest and most practical Fly Book made is well established everywhere. The quickness and dispatch with which Flies of any size are placed within these books without coiling of the Snell or mutilation of the Fly makes its superiority over all other methods very easily recognized by all anglers. The Flies can be as readily detached when wanted. The leaves to which the Flies are attached will in the future be made of a new material of more durability and finish than before. The workmanship and material will be kept up to highest standard, and no effort will be spared to keep the BRAY FLY BOOK (as it now is) the BEST in the WORLD.

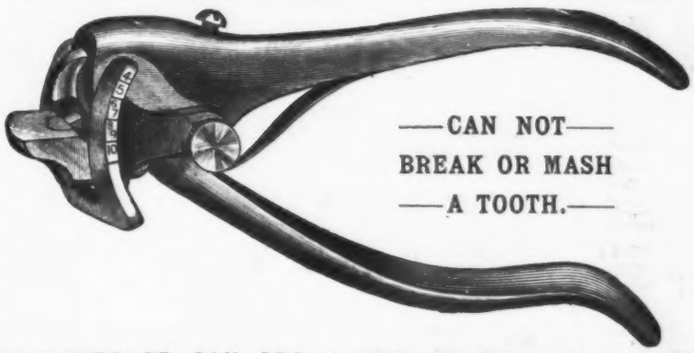
YOU CAN MAKE NO MISTAKE!

LLOYD ACME SAW SET.



—CAN NOT—
BREAK OR MASH
—A TOOTH.—

A WOOD-BUTCHER CAN SET A SAW AS WELL AS A SAWYER.

The Screw on the top of the Set prevents mashing the Tooth. The Gauge on the side assures the correct set, and the small Screw on the face of the Set gives the required bend to the tooth. All wearing parts are made of steel, strong and durable.

LIST: HAND SAW SETS, $15.00 PER DOZEN. CROSS CUT SAW SETS, $30.00 PER DOZEN.

METROPOLITAN.

This differs from our other wood frame wringers of medium price in having malleable iron swinging clamps of a strong and improved pattern, that swing under the wringer, and a folding apron, allowing the machine to be closely packed for shipment, and it is preferred by many because of the small space it occupies in storage. It is a handsome, well proportioned machine, of hard maple frame, the wood being selected, free from defects and blemishes. Two top thumbscrews, metal journal boxes and oil cups combined, double gears, etc.

Furnished in natural wood or cherry stain without extra charge.

Write for Prices and Catalogue.

"NEVER-BREAK"

COLD HANDLE
Wrought Steel Spiders,
WITHOUT RIVETS.

Will not absorb grease.
Will not impart flavor of previously cooked food.
Will not burn before cooking.
Will not scale.
Will not warp.
Will "NEVER-BREAK"

The Handle is made round, fits the hand perfectly and is ALWAYS COOL.

The **"NEVER-BREAK"** Spider is the ONLY Wrought Steel Spider manufactured WITHOUT RIVETS complete from ONE PIECE OF METAL.

THE BRONSON SUPPLY CO., CLEVELAND, O., U. S. A.
Branch: 72 Beekman Street, New York.

☞ALSO A FULL LINE OF WROUGHT STEEL COOKING UTENSILS.☜

Wrought Steel Hollow Ware.

"Empire" Cold Handle Steel Spiders.

PATENTED.

The "Empire" Cold Handle Spiders are made from cold rolled wrought steel of the highest grade and finish, and are stamped from a SINGLE PIECE, and polished perfectly smooth and bright. The thickness of the steel of which the Empire Spiders are made (No. 14 Standard gauge) is a guarantee that they cannot break, bend or warp. An important feature also is that they are made without rivets, and cannot leak or the handles become loose.

The handle is reinforced in an attractive manner with a cover made of heavy tin, making a hollow ventilated handle which keeps always cool and comfortable to the hand.

The Empire SPIDERS will be found on inspection the most perfect ever made and cannot fail to give satisfaction. Our 1890 Catalogue of Patented Specialties, Acme Fry Pans, and Edgars' Patent Stove Shovels, mailed on application.

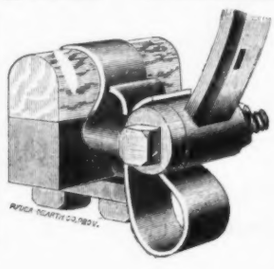
THE THILL COUPLING SPRING

MADE BY THE

SABIN MACHINE COMPANY, Montpelier, Vt.



Is unquestionably the **BEST METAL SPRING** made for the purpose of preventing the rattling of the Thills.

It is adapted to any coupling where rubbers are used. It does its work perfectly, and is so formed as not to wear the iron of the coupling, as it presents a flat, smooth surface to the bearing, and yet holds the shaft perfectly in place, and prevents all rattling.

It Outlasts many sets of rubbers and costs but a trifle more. It is easily adjusted. Made in four sizes, ⅞, 1, 1⅛ and 1¼ inch. Packed one dozen pairs in a box.

Send for Sample Dozen or Larger Quantities to

The Victor Convertible Furnace.

THE BURNER, as well as the furnace body, is **convertible**, producing a **noiseless, powerful** flame for **tinners'** use —which will heat a three-pound copper from cold to a point where it can be used for soldering **in two minutes**. By simply pulling a slide it is converted into a **blast furnace** for **plumbers'** use and forging purposes, and produces an **intensely hot**, blue flame, which will melt ten pounds of Babbitt Metal in **five minutes**. Is the **only** furnace made with **asbestos point protectors**, and that **will not** burn tinning off the Coppers. The Burner is protected by a hood—will stand a **strong wind**, and can be used on roofs of buildings. The Reservoir is made of **brass**, nickel trimmed. The parts are **malleable iron**. Is absolutely non-explosive; cannot be filled while burning. Weight, 8 lbs. Height, 13 in.

We also make a furnace for **plumbers'** use only, sold at a lower price.

Manufactured by

The Standard Lighting Co., Cleveland, Ohio.

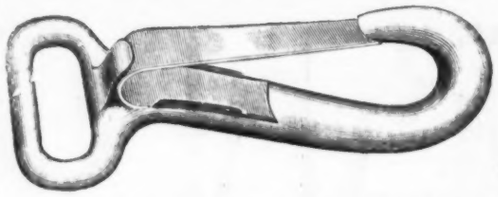
COVERT'S "TRIUMPH" SNAP



Spring used in TRIUMPH SNAP.

Takes the lead. Every feature a triumph. No dirt or ice can clog it. It is the most convenient, most durable and the handsomest. Made in all sizes, both loop eye and round eye; also swivel eye and open eye, and double for bit snap, &c. We are the parties who guarantee satisfaction or refund your money.

TRIUMPH SNAP.

As used for attaching Bit to Bridle or Halter. Has no equal, and the lowest in price.

OUR ROPE HALTERS ARE THE LOWEST IN PRICE AND THE BEST.

SUCCESS ROPE CLAMP.

Our Success Rope Clamp Thimble is made in two parts going together, forming a loose joint hinge one side and fastened with a screw on opposite side. It is positively secure against slipping on the rope when in use, lighter, neater and more convenient to apply than a whole thimble and is lower in price.

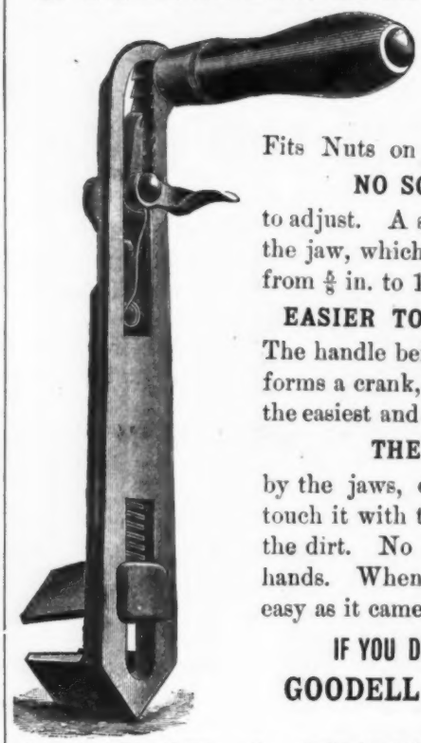
Send for catalogue illustrating our specialties in Saddlery, Coach and General Hardware.

THE E. COVERT MFG. CO.,

Farmer Village, N. Y., U. S. A.

THE CHAMPION

CARRIAGE WRENCH



IS MADE OF

MALLEABLE IRON

Waranted Not to Break with Legitimate Use.

Fits Nuts on any ordinary Carriage or Wagon.

NO SCREWS OR THUMB NUTS

to adjust. A simple pressure of the finger opens the jaw, which adjusts itself to any Square Nut from $\frac{5}{8}$ in. to $1\frac{1}{4}$ ins.

EASIER TO OPERATE THAN ANY OTHER.

The handle being at right angles with the body forms a crank, allowing the nut to be turned off in the easiest and most natural manner with one hand.

THE NUT IS HELD FIRMLY

by the jaws, consequently it is not necessary to touch it with the fingers. No danger of falling in the dirt. No grit on the nut. No oil on the hands. When you are ready it goes on just as easy as it came off.

IF YOU DON'T SELL THEM YOU OUGHT TO.

COMBINATION WRENCH.

Case-Hardened Throughout. Parts Interchangeable.

This wrench not only combines the superior qualities of a Gas Pipe Wrench but also all the requisite combinations of a regular Nut Wrench, thus making a combination which has no equal.

This Wrench can be Furnished with Long Nut or Sleeve.

No. 3 PIPE WRENCH.

The serrated jaws of the Wrench are interchangeable; that is, the same serrated plate may be used for either the stationary or sliding jaw, so that if one plate is broken another can be furnished adapted to either jaw without express designation. The slides, nuts and various parts are also interchangeable, thus easily repairing the Wrench at very small expense, and with as perfect practicability for further use as when the Wrench was new.

For Circulars and Price List, address

BEMIS & CALL HARDWARE & TOOL CO., Springfield, Mass., U. S. A.

TRIMO PIPE WRENCH,

Forged Steel.

All parts interchangeable.

Grips firmly without loss of motion, in close quarters. Releases its hold readily. Does not crush the pipe. Causes no trouble

TRIMO CHAIN PIPE WRENCH.

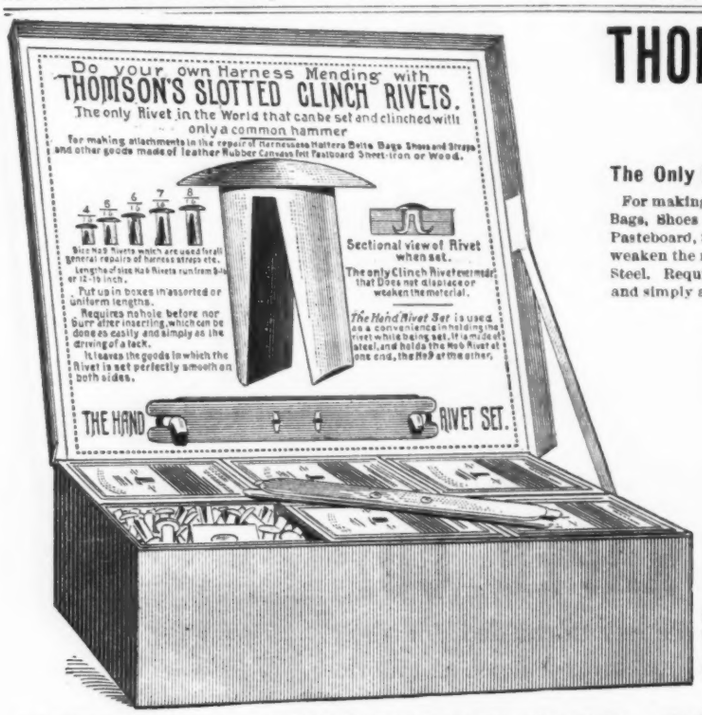
LOWEST PRICES.

We have Special Machinery designed and patented by S. J. Shimer & Sons, with Automatic Feed, cutting from four to six Washers at every stroke.

EVERY WASHER IS PERFECTLY FLAT WITH HOLE IN TRUE CENTRE.

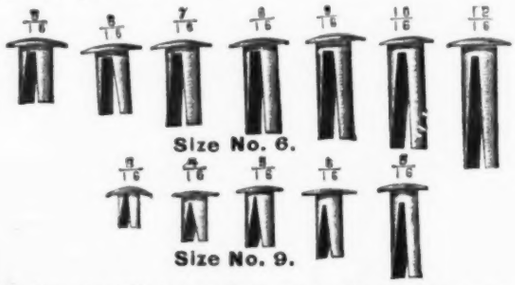
All standard sizes kept in stock. Irregular or odd sizes made promptly to order.



THOMSON'S BIFURCATED or SLOTTED RIVETS.

The Only Rivet in the World that Can be Set Without a Machine.

For making attachments in the manufacture or repair of Harnesses, Halters, Belts, Bags, Shoes and Straps, and other goods made of Leather, Rubber, Canvas, Felt, Pasteboard, Sheet Iron or Wood. The only Clinch Rivet that does not displace or weaken the material. It is tough and very strong, being made from solid Annealed Steel. Requires no hole before, nor burr after inserting, which can be done as easily and simply as the driving of a tack.



The above cuts of Rivets are each actual size and length. Neatly put up in Cartons of 12 Boxes, each box containing 100 Rivets. Japanned or Coppered.

Goods can be had from all the large Hardware and Saddlery Hardware Jobbers in the country.

THE IRON AGE STANDARD HARDWARE LISTS

FOR USE IN PRICE BOOKS.

Compiled by R. R. WILLIAMS, Hardware Editor of The Iron Age.

PRICE 25 CENTS.

This pamphlet contains the principal standard Hardware price-lists in as clear and compact an arrangement as possible, so as to permit their being advantageously cut out and inserted in the price book. In order to make them adapted to this use they are printed on thin and tough paper of fine quality and on only one side of the paper.

Saucepans and Round Boilers.

	Plain.	Turned.	Tin'd or En'd.
Pints.			
1	$0.30	.35	.39
1½	.32	.37	.44
2	.35	.39	.48
3	.42	.47	.56
Quarts.			
2	.50	.56	.63
2½	.53	.59	.68
3	.55	.62	.73
4	.60	.68	.84
5	.65	.75	.96
6	.70	.81	1.11
7	.75	.84	1.21
Gallons.			
2	.85	.96	1.31
2½	1.05	1.18	1.56
3	1.20	1.35	1.70

The success of the effort to give the lists in small space is illustrated in many of the lists, in which a clear and condensed arrangement is secured. For instance, the wrench list occupies but 3 inches by ¼ inch, while the list of Stove Hollow Ware, in very small space, gives the list prices on a large and important line of goods which often occupy several pages in catalogues. In several lists, such as Strap and T Hinges and Butts, a new arrangement is adopted, which is regarded as presenting these lists in a very convenient as well as condensed form.

As is obvious from the lists herewith reproduced, the shape and size of the different lists varies greatly, the aim being to give each list the smallest and most convenient arrangement possible. None of the lists are, however, more than 3½ x 6 inches in size, very few of them being as large as this and most of them very much smaller. In use it is intended that they shall be trimmed closely before they are inserted in price books, when they may be attached either by one edge close to the hinge of the book, as will, perhaps, be most convenient with the larger lists, permitting the use of the entire page for memoranda, or the smaller lists may be pasted on the page in connection with the entries in regard to discounts, freights, &c. Many of the lists are so compact in arrangement as when thus inserted to leave ample room for recording quotations.

Stove Hollow Ware. Ground and Unground.

POTS, KETTLES, ETC. (CAST IRON.)

No.....	6	7	8	9	10	11
Pots.....	$0.65	.75	.85	1.00	1.25	1.75
Kettles.....	.55	.65	.70	.85	1.00	1.40
T Kettles.....	.75	.80	.90	1.00	1.25	....
Spiders.....	.27	.30	.35	.40	.50	.60
Griddles Round	.22	.25	.27	.30	....	....
" Long..	.40	.50	.60	.75	....	....

SCOTCH AND YANKEE BOWLS.

No.....	1	2	3	4	5	6
Scotch Bowls..	$0.35	.40	.45	.50	.60	.70
Yankee Bowls.	.35	.45	.55	.65	.75	.90

Wrenches. Standard List.

Inches.	6	8	10	12	15	18	21
Black...	$9.00	$10.00	$12.00	$14.00	$24.00	$30.00	$36.00
Bright..	10.00	11.00	14.00	16.00	26.00	32.00	38.00

Some merchants use this pamphlet for reference, checking off invoices, etc., as it gives the leading lists in a more convenient form than they can otherwise be obtained. The lists are, however, intended primarily to be cut out and inserted in price books, and *can be used in connection with any of The Iron Age Hardware Price Books.*

Glue Pots. Tinned or Enameled

No. 4/0....	$4.50	No. 2	$8.40
3/0....	5.00	3	10.26
2/0....	5.50	4	12.42
0	6.00	5	14.58
1	6.75	6.	16.94

That the Standard Hardware Price Lists meet a want of the trade is evident from the fact that a new edition is already called for.

EVERY HARDWAREMAN SHOULD HAVE A COPY. Price 25 cts.

SENT, POSTPAID, ON RECEIPT OF PRICE BY

DAVID WILLIAMS, Publisher, 96-102 Reade St., New York.

Bradley Hammers

2000 IN USE.

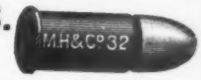
FOR 20 YEARS these Hammers have been in the market, and during all that time have been acknowledged the very best. The material we use and our method of construction are the result of ripe experience, and not the jumped-at conclusions of amateurs. Send for circulars and price-lists.

BRADLEY & COMPANY,

SYRACUSE, N. Y.

Large Reduction in Prices.

FEBRUARY 15th.



A REVOLVER without a **LOADING GATE** is as useless all year round as a pair of **ICE CREEPERS** would be **IN JULY.**

BECAUSE all central fire cartridges are now made inside-lubricated, and will slip out of revolvers having no Loading Gate. All the X. L. Revolvers, both with Regular and Folding Hammers, have Loading Gates and Rebounding Locks.

We have largely increased our facilities for the manufacture of the X. L. Revolvers and H. & A. Automatic Ejecting Revolvers, and shall be able to fill all demands promptly this coming year. This is the best selling line ever put on the American market and retailers can double their money on these goods.

Our new illustrated catalogue, with reduced prices, will be ready on the 25th of February and will be sent upon request to any dealer.

HULBERT BROS. & CO.

Opposite Fifth Ave. Hotel, Formerly MERWIN, HULBERT & CO.,

26 West 23d Street, New York.

THE IRON AGE

The oldest paper in the world devoted to the interests of the Hardware, Iron and Metal Trades, and a standard authority on all matters relating to those branches of industry.

RAILINGS, WINDOW GUARDS.

WIRE LATHING WITH HAMMOND'S METAL FURRING.

42 and 44 Cliff Street,
NEW YORK.

148 Lake Street,
CHICAGO.

Factories, { GEORGETOWN, CONN. / CHICAGO, ILLINOIS.

ESTABLISHED 1818.

TO THE TRADE.—In former years we have been unable to supply the demand for

POULTRY NETTING,

(AMERICAN TRADE G&B MARK. SUPERLATIVE.)

but having increased our facilities and accumulated a large stock, we can now promise prompt shipments from either

NEW YORK, CHICAGO or GEORGETOWN, CONN.,

which will be appreciated by dealers when they consider that the Netting Season is limited to a short period and that they must have the goods when required or lose sales.

OUR NEW FACTORY.

ERECTED 1891.
OCCUPIED FEBRUARY, 1892.
SIZE, 41 x 168 Feet.
Four Stories.
Floor Space, 30,000 sq. ft.

THE LARGEST AND MOST COMPLETE WIRE WORKING PLANT IN CHICAGO.

See description in THE IRON AGE, March 24, 1892.

In sending us orders all can rely on getting first quality Netting, full length, width, full weight and reliable in mesh. All our two (2) inch mesh, No. 18 and 19, is made with THREE STRAND ROPE SELVAGES, which makes it much stronger and better than any other brand made with two wire selvages. We carry a complete assortment of Netting of all meshes from ¼ to 3 inch. We also make two leading kinds of

STEEL WIRE FENCING,

"Cottage" Lawn and Garden Fencing for resident property, and the World's Web Fencing for farms, railroads, cemeteries, &c. GATES AND FENCING TOOLS.

Ours is the only complete line of this class of goods made by one concern in the country. Catalogues mailed on application.

☞ **To insure yourself against inferior Netting and annoying delays, send us your orders.**

AMERICAN SCREW COMPANY

PROVIDENCE, R. I.

COLD FORGED PRODUCTS.

"Spur Pointed" Wood Screw.

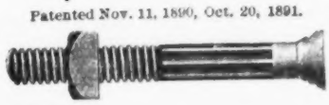
Patented May 10, July 19, 1887; Oct. 29, 1889; Aug. 19, Oct. 21, 1890; April 7, May 12, 1891.

ITS ADVANTAGES ARE:

Stronger than a cut screw.
Forged nick.
Requires the use of only one bit.
Inserted easier.
Increased holding power.
Centralized point.
Is cold forged, and entire surface has a metallic skin.

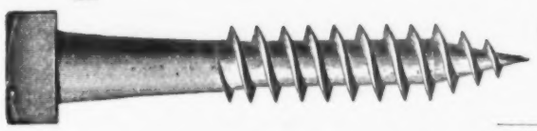
Samples Sent on Application.

Patented Nov. 11, 1890, Oct. 20, 1891.



FLUTED TIRE BOLTS.

SEND FOR SAMPLES.



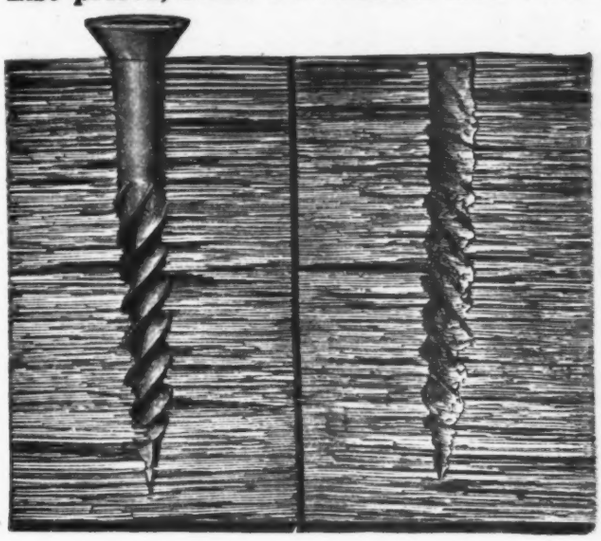
Cold Forged Coach Screws.

Patented May 10, July 19, '87; Oct. 29, '89; Aug. 19, Oct. 21, '90; Apr. 7, '91.

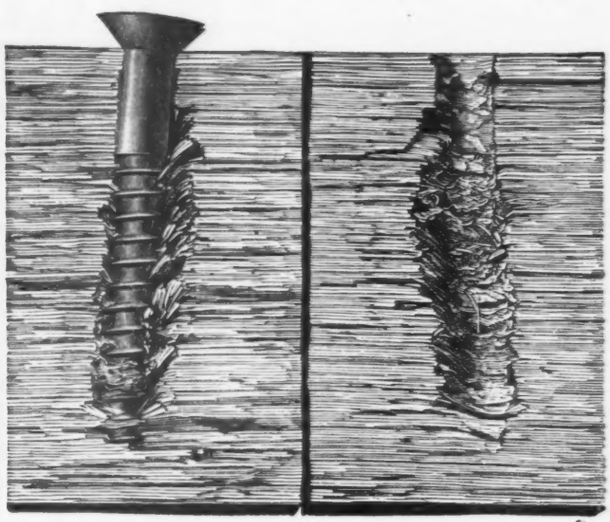
"ROGERS' DRIVE SCREWS."

Patented May 10, 1887; July 19, 1887; July 10, 1888. Other patents pending.

List prices, same as common iron wood screws. Discount for Flat Heads, 82½%



THE "ROGERS DRIVE SCREW,"
Driven with a hammer its entire length.



A COMMON CUT THREAD SCREW,
As ordinarily inserted, *i. e.*, driven two-thirds of its length with a hammer and the balance with a screw-driver. Fibres of the wood are necessarily broken, and holding power of screw much impaired.

Should be driven with a hammer its entire length.

1. Turns like a screw when driven with a hammer.
2. Holds stronger than a common screw as ordinarily inserted.
3. Does not break the fibres of the wood.
4. Cheaper than a common screw.
5. Is cold forged and has metallic skin over entire surface.

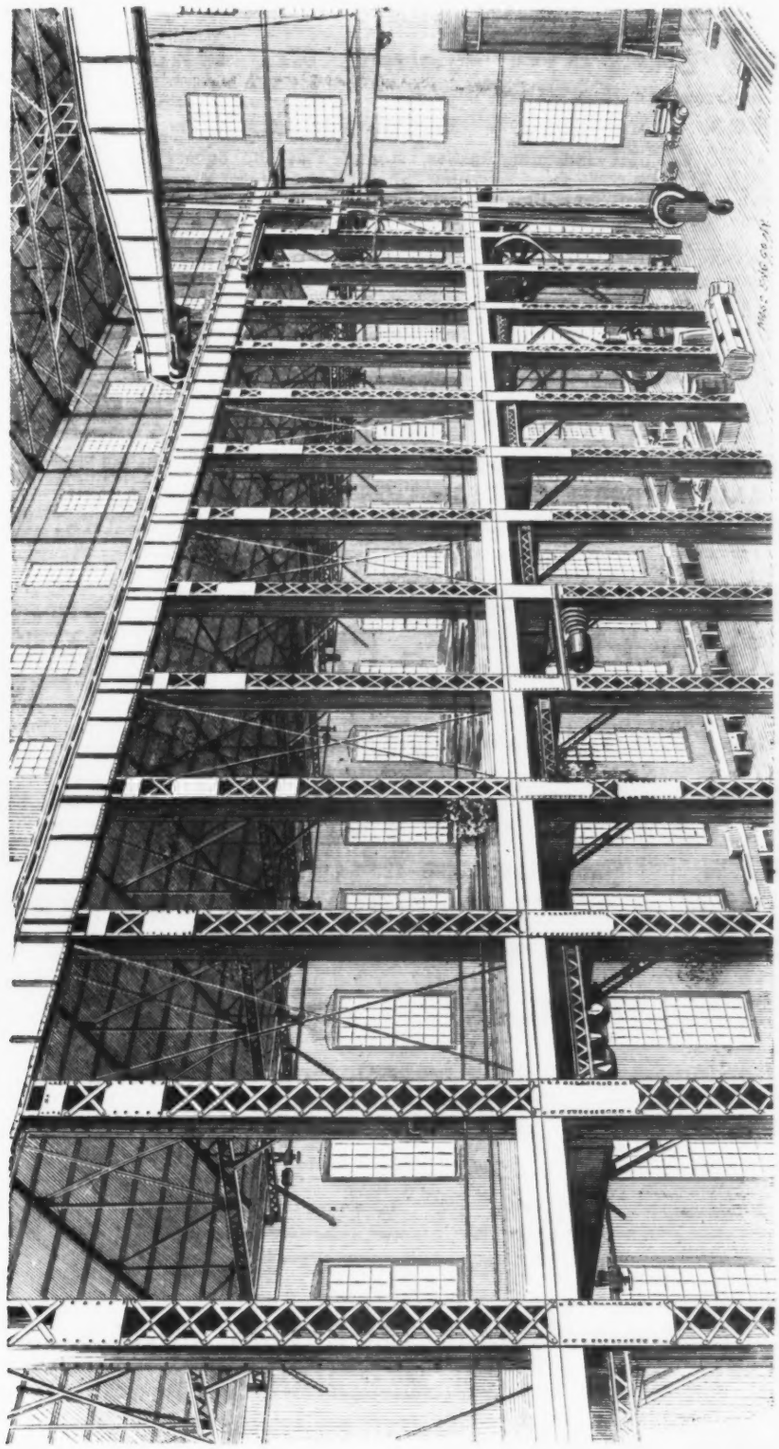
THE BERLIN IRON BRIDGE CO.,

Engineers, Architects and Builders in Iron.



The above illustration is taken direct from a photograph, and shows the construction of an Iron Building designed and built by us for The Newport News Ship Building & Dry Dock Co., at Newport News, Va., and used by them as a Machine Shop. The photograph was taken looking diagonally across the building to show the Traveling Crane and the Gallery floor. The building is 100 ft. in width by 300 ft. in length, the central portion being 50 ft. and the wings 25 ft. in width. The wings are made two stories high The central portion is controlled by a traveling crane, and the wings by jib cranes.

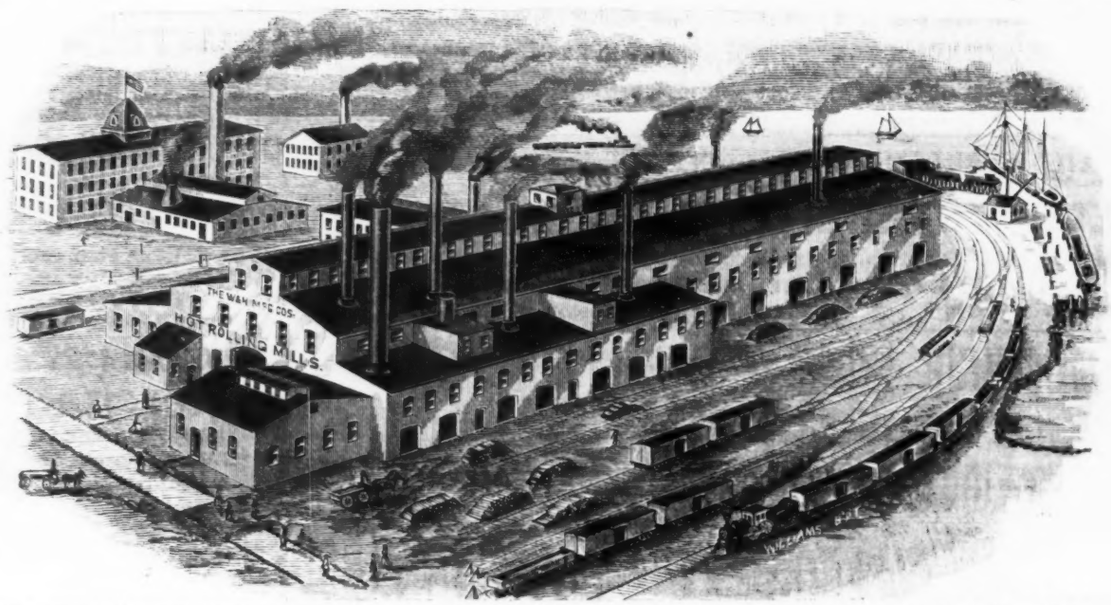
HOT ROLLED STEEL.



Having recently greatly increased our output by the purchase of the large plant of the Bridgeport Rolling Mill Co., shown in the above illustration,

WE ESPECIALLY SOLICIT ORDERS FOR

HOT ROLLED STRIP, PLATE AND BAR STEEL,

Also Special Shapes Rolled to Order,

and are prepared to make

PROMPT DELIVERIES AND LOW PRICES.

Depending upon sizes, quantity and quality needed.

ALSO THE CELEBRATED

COLD ROLLED SHEET AND STRIP STEEL

FOR PRESSED, STAMPED AND DRAWN WORK, ETC.

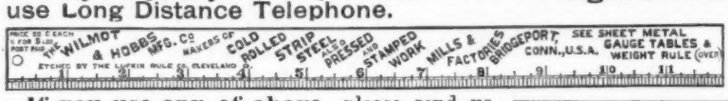
UNEXCELLED BECAUSE OF ITS

SMOOTHNESS OF SURFACE,
ACCURACY OF GAUGE,
GENERAL UNIFORMITY,
GREAT DUCTILITY,
FREEDOM FROM GRIT.

Furnished in any width, ½ inch to 12 inches, and in lengths of 3 inches to 300 feet, also any degree of stiffness and quality of surface.

COLD ROLLING MILL.

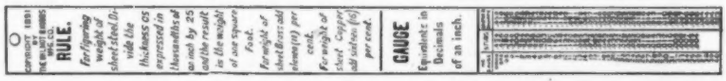
The Eastern Trade will find these Hot and Cold Rolling Mills extremely convenient, as they will not be subject to the long delays in transportation, etc., incidental to dealing with Western Mills, and Accuracy of Gauge and Width and Uniformity of Quality will always be maintained at the **Highest Standard of Excellence.** When in a hurry use Long Distance Telephone.



STEEL RULES

GIVEN AWAY.

If you use any of above, please send us this page of IRON AGE and a list of the material, mentioning size, quantity, quality generally ordered, and we will **MAIL A RULE FREE.**



BRIDGEPORT, - - - - - CONN.

STEAM PLANTS.—Before purchasing any **FEED WATER HEATER and PURIFIER.** or deciding upon the adoption of any **System of Steam Heating,** kindly send us postal, and we will send one of our representatives, at our expense, to call upon you personally, in order to explain advantages which we guarantee over all others.

WEBSTER'S "VACUUM" FEED WATER HEATER AND PURIFIER.

Sizes from 30 to 2,500 horse-power carried in stock. Over 125,000 horse-power in daily use in the largest steam plants in the United States. *Send for Catalogue.* **CARDINAL POINTS.**—Highest temperature, purest feed water upon least quantity of exhaust steam, free exhaust to atmosphere, between engine and heater.

"WILLIAMES' VACUUM SYSTEM OF STEAM HEATING."

Without Back Pressure upon the Engine Guaranteed.—*Patent sustained in two Suits in the United States Circuit Court.* Adopted by 300 of the largest Factories, Mills, Electric Light Companies, Market Houses, Office Buildings, Schools, Theatres, Churches and Railroad Stations. *Send for Catalogue.*

ADVANTAGES.—Free exhaust to atmosphere, relief of back pressure, saving power, water of condensation, increasing efficiency of heating system, saving from 10 to 40 per ct. of fuel. Exact percentage can be determined after making examination of steam plant.—**ALL INFRINGERS WILL BE PROSECUTED.**

Can be attached to any steam plant. Furnished upon trial under guarantee. WARREN WEBSTER & CO., Main Office & Works, 491 N. 3d St., Philad'a.

BOOKS

—ON—

Mechanical and Steam Engineering.

Barber.—Engineers' Sketch Book. By THOMAS WALTER BARBER, engineer. Nearly 2000 illustrations, descriptive notes and memoranda; 243 pages; cloth..$3

Thurston.—A Manual of Steam Boilers, their designs, construction and operation. For technical schools and engineers. By PROF. R. H. THURSTON. Second edition; 183 engravings in text; 671 pages; cloth.....$5

Smith.—Treatise upon Cable or Rope Traction, as applied to the working of street and other railways. Revised and enlarged from *Engineering*, London. By J. BUCHNALL SMITH. Illustrated; 195 pages; cloth.....$2.50

Forney.—The New Catechism of the Locomotive. Rewritten and enlarged with new matter and illustrations selected from the latest practice in this country. By M. N. FORNEY; 709 pages; cloth. $3.50

Sinclair.—Locomotive Engine Running and Management. A practical treatise on the locomotive engines, showing their performance in running different kinds of trains with economy and dispatch; also directions regarding the care, management and repairs of locomotives and all their connections. Illustrated by numerous engravings. Seventeenth edition. By ANGUS SINCLAIR, M.E. Cloth.....$2

Cromwell.—A Treatise on Belts and Pulleys. Embracing full explanations on fundamental principles, proper disposition of pulleys, rules for determining widths of leather and vulcanized rubber belts and belts running over covered pulleys; strength and proportions of pulleys, drums, &c.; together with the principles and necessary rules for rope gearing and transmission of power by means of metallic cables. By J. HOWARD CROMWELL, Ph. B., author of a Treatise on Toothed Gearing; 271 pages; cloth...$1.50

Rose.—The Slide Valve Practic- ally explained. Embracing simple and complete practical demonstrations of the operation of each element in a slide-valve movement, and illustrating the effects of variations in their proportions by examples carefully selected from the most recent and successful practice. By JOSHUA ROSE, M. E. Illustrated by 35 engravings; 100 pages; cloth.....$1

Edwards.—Modern American Locomotive Engines, their Design, Construction and Management. A practical work for practical men. By EMORY EDWARDS, M. E. Illustrated by 78 engravings; 383 pages; cloth.....$2

Forney.—The Car Builder's Dic- tionary. An illustrated vocabulary of terms, which designate American railroad cars, their parts and attachments. Revised and enlarged edition. By MATTHIAS N. FORNEY, M.E.; 358 pages; cloth.....$3

Rose.—Modern Steam Engines An elementary treatise upon the steam engine, written in plain language, for use in the workshop, as well as in the drawing office, giving full explanations of the construction of modern steam engines, including diagrams, showing their actual operation; together with complete but simple explanations of the operations of various kinds of valves, valve motions and link motions, &c., thereby enabling the ordinary engineer to clearly understand the principles involved in their construction and use, and to plot out their movements upon the drawing board. By JOSHUA ROSE, M.E. Illustrated by 422 engravings; 321 pages, 10 x 12 inches; cloth.....$6

WHAT
Constitutes the Best Paint?

The paint that for the longest time will put off the necessity of repainting is, in the nature of things, the best and the most economical.

Those who have used Dixon's Graphite Paint find that a roof well painted will not require repainting in 10 to 15 years.

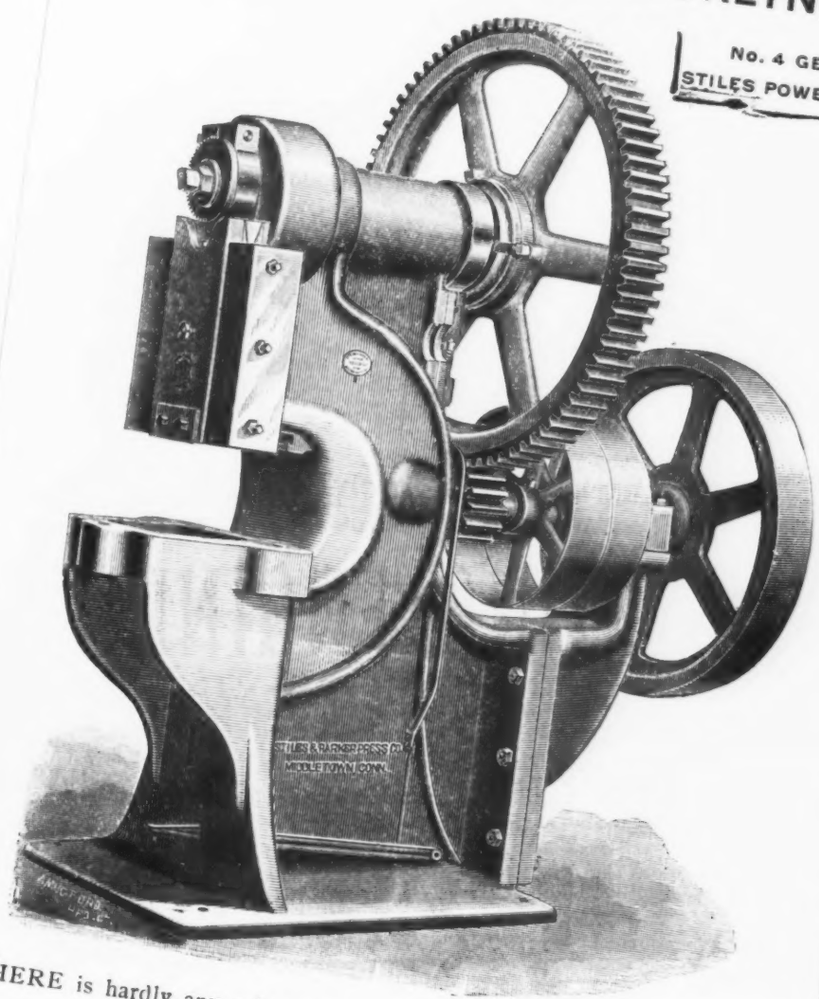
This is a page from our new SECTIONAL CATALOGUE. If you want Presses, Dies, Shears or Machinery for working sheet metal write to us.

E. W. BLISS CO. (Ltd.), BROOKLYN, N. Y.



THERE is hardly any other style of power press that has met with such general favor among manufacturers of articles requiring heavy punching as the line of Stiles Power Punching Presses which we designate by the numbers of **0** to **5½**. Nearly all the best manufacturing establishments in this line in America, and many in Europe, employ one or several of these presses. The range of work for which they are adapted covers nearly every kind of blanking, cutting, punching, perforating, forming and bending, including a large proportion of the operations needed in the manufacture of hardware, locks, cutlery, guns, sewing machines, typewriters, and many other articles made out of sheet metal.

We make the Stiles Drop Hammers, Forging and Punching Presses and Machinery for Hardware Manufacturers, etc., etc.

THE WORLD'S CHAMPION

New Upright Self Feed

1891 Pattern $10 Post Drill.

This Drill is Double Back Geared, can be changed from slow to fast speed, weighs 120 pounds, drills from 1/8 to 1¼ inch hole, and to center of 14½-inch circle, designed for general blacksmith work. The diameter of the spindle is 1⅛ inch, length 13 inches, the screw having a run up and down of 4 inches. The crank can be shifted from shaft A to shaft B (or balance wheel shaft), thus increasing the power two and one-half times for heavy work. Shaft A for lighter work and faster speed. The change can be made in an instant from fast to slow speed. This Drill is supplied with an improved Automatic Self-feed. The drill is mounted on a hardwood 2-inch plank, 50 inches long, 6 inches wide, and not backed up by an extra addition of wood in order to increase the swing, which is often done to save iron and thus weakens the drill where it should be the strongest. The Drill is warranted in every respect and has the words cast thereon, "Every Drill Warranted." The spindle is bored to take ½-inch straight shank drills, but if specially ordered will be bored to take in ⅝ or 41-64, without extra charge.

Cut shows 5-ton Ridgway Crane in Foundry, Diamond State Iron Co., Wilmington, Del.

Far Superior to Usual Hydraulic.

No pumps. No accumulator. No shocks. None of that everlasting bother with valves and packings. None of that awful waste of power. No freezing. Not touched from one year's end to the other.

Attached to any steam supply is ready for business at once. Uses so little steam it is never missed. The greenest help works it. Absolutely safe. Being balanced is easy on buildings and takes small foundation. So cheap any plant can use it. Always earns its cost in a few months.

In these days of close prices you can't afford to move goods by hand. The best plants are getting them. Look at the list. Only a new machine, too! It is the only kind of crane for you to get. It is safe to follow the most able and successful steel and iron makers. The largest concerns in Europe are also getting them from our Belgium factory. It is the Crane of Cranes.

THE GREATEST FOUNDRY CRANE KNOWN.

THE WOODRUFF SYSTEM OF KEYING FOR MACHINERY

Does not require skilled labor to cut key way or fit key.

The peculiar way of inserting the key practically makes it part of the shaft.

A man will fit more than double the number of keys in a day than by the ordinary method.

Will save you from 50 to 75 % on the cost of your keying.

ENDORSED BY MECHANICS AND ENGINEERS.

Illustrated pamphlet containing a full description will be sent free on application.

Systematic Mineralogy, based on a natural classification, with a general introduction. By T. Sterry Hunt, M.A., LL.D. The author's aim is to reconcile the rival and hitherto opposed chemical and natural historical methods in mineralogy, showing that when rightly understood, chemical and physical characters are really dependent on each other and present two aspects of the same problem, which can be solved only by the consideration of both. He has devised and adopted a Latin momenclature and arranged the mineral kingdom in classes, orders, genera and species, the designations of the latter being binomical. 391 pages, cloth.....$5.00

Fluor-Spar.

ILLINOIS FLUOR-SPAR & LEAD CO.

SUCCESSORS TO

MULLIN'S

FLUOR-SPAR AND LEAD MINING CO.,

57 Board of Trade Building, Chicago, Ill.

This Company owns, at Mineral City, on the Ohio River, the largest Mines of Fluor-Spar ever discovered.

We are working a large force of miners; our new mills and tram railway are running, and we are now prepared to furnish the purest Fluor-Spar in any quantities to Iron and Steel Manufacturers, to Smelters of Gold, Silver and Copper, and to Paint, Paper and Glass Makers.

Fluor-Spar is pronounced the most powerful of fluxes; it facilitates the reduction of the most refractory materials. For Alkalies, Clays and all Metallic Oxides it has a remarkable solvent power; it reduces the melting point and saves fuel; it diminishes the loss of metal, saves labor and keeps the cupola clean; reacts strongly upon scaffolds and cloggings.

One part of Fluor-Spar is more effective than ten parts of Limestone. Limestone is an enemy to iron; Fluor-Spar is a friend.

Directions for the proper use of Fluor-Spar given our patrons.

We ship Lump, Gravel, Crushed and Ground, in bulk or barrel.

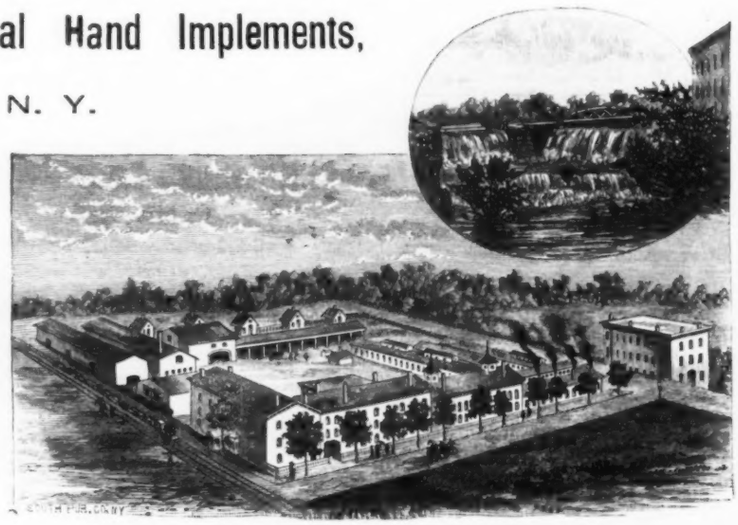
—PLANT FOR SALE.—

AUBURN MANUFACTURING CO.

Manufacturers of Agricultural Hand Implements,

AUBURN N. Y.



The Stockholders of this Company have decided to offer its manufacturing plant and machinery for sale.

The buildings surround a hollow square of several acres in extent, as shown in accompanying cut. The main buildings are substantially constructed of stone and brick, thoroughly equipped with fire extinguishing apparatus, and cover the entire frontage of the property, 350 feet.

It has magnificent water privileges, 300 Horse Power, supplemented by a modern Steam Plant of 250 Horse Power added in 1888, but scarcely used since then, as Water Power has been ample. Steam plant is in perfect condition.

The Plant is located on the line of the New York Central Railroad, as shown in cut, and but a few rods distant from Lehigh Valley Railroad, thus affording unequaled shipping facilities.

It will be offered for about one-third the original cost of construction.

Auburn is a city of about 25,000 population, and has an excellent class of labor, recruited from the surrounding farming country.

Accurate map of the premises will be furnished on application.

NEW BEDFORD IRON FOUNDRY,
New Bedford, Mass.

A NEW COAL FIELD AND TIMBER DISTRICT.

The **OHIO EXTENSION** of the **NORFOLK & WESTERN RAILROAD** penetrates one of the most valuable coal and timber districts in the United States. The line of this extension is 193 miles in length, from Coal Grove, Ohio, via Kenova, W. Va., to Elkhorn, W. Va., of which 54 miles, to Dunlow, W. Va., is now opened for business and the entire line is under construction and will be completed early in the fall of 1892. It passes through virgin country abounding in gas, splint, cannel, steam, coking, and domestic coals and fire-clay; chestnut-oak, white-oak, beech and poplar timber. Those looking for advantageous sites for the location of saw-mills or tanneries and establishments for the manufacture of furniture, wagons, agricultural implements, wood-pulp, fire-brick, or manufactured iron articles, should investigate the resources of this new field. The new town of Kenova, W. Va., offers many advantages for the location of manufacturing establishments, also the territory opened up by the Norfolk & Western Railroad on the north bank of the Ohio River, between Kenova, W. Va., and Portsmouth, Ohio. For the manufacture of finished iron articles the district offers unequaled advantages, with supply of coal and Pocahontas coke on short hauls, and with the blast furnaces of the Ironton, Hanging Rock and Ashland district in close proximity. Favorable freight rates made upon raw materials to all manufacturing establishments on this line.

For further information as to freight rates, maps, names of parties to whom application should be made for coal leases, &c., apply to

JOHN J. ARCHER,
Div. Freight Agent, Columbus, O.

or CHAS. G. EDDY,
Vice-President, Roanoke, Va.

TO LET.

The Engine Works at Newburgh, N. Y., at present occupied by Wm. Wright, is offered to let from May 1st, 1892.

The property consists of machine shop, foundry, boiler, forge and pattern shops with a full equipment of tools.

The works are located in the heart of the City and convenient to railroad and river transportation. For terms apply to

HOMER RAMSDELL,
Newburgh, N. Y.

WANTED.

Foundry Superintendent. Must be thoroughly conversant with the melting of iron, also the various mixtures for different kinds of work. Must have a thorough knowledge of molding, core making, &c. Also competent to manage workmen and arrange prices for work. No one need apply unless he can furnish strictly first-class references. Address "SUPERINTENDENT," P. O. Box 1165, New York, N. Y.

FOR SALE. WELL EQUIPPED Machine Shop and Fouudry,

Situated about 40 miles from Cleveland, Ohio, at a low price and on reasonable terms. Cheap fuel. Address

A MODEL AND MODERN

STOVE FOUNDRY

FOR LEASE OR SALE.

A Foundry consisting of molding room 120 x 145 feet, main building 50 x 160 feet, three stories high, engine and boiler room 25 x 50 feet, stock house 20 x 20 feet and supply and cleaning rooms 20 x 120 feet, covering in all about 34,000 square feet; the buildings are all of brick, steel roofed, and are situated at Clifton Forge, Virginia. They contain a large amount of machinery including a large lot of stove patterns especially designed for them, and with an expense of between $2000 and $3000, the plant could be put into full operation immediately.

This Foundry is most advantageously situated, being but three miles from the Longdale and Lowmoor Furnaces and but a short distance from the coal fields. Both pig iron and coal or coke can be laid down at the Foundry at the very lowest rates and a good market is ready for either stoves or the product of a general foundry business, with freight rates which will compare favorably with those of any other point. This plant will be leased at a nominal rental to reliable and responsible party who will operate it, with the privilege of purchasing in a stated period on liberal terms. Correspondence in this matter or a personal inspection of the plant is solicited. Address

LEWIS HARMAN,
General Manager, Clifton Forge, Va.

Great Inducement

For Manufacturers to Locate on the Line of the ERIE RAILWAY.

THE LATEST BOOKS.

Notes and Examples in Mechanics; with an appendix on the Graphical Statics of Mechanism. By IRVING P. CHURCH, C. E. This forms a companion volume to the writer's "Mechanics of Engineering" and contains various notes and many practical examples, both algebraic and numerical, serving to illustrate more fully the application of fundamental principles in mechanics of solids; together with a few paragraphs relating to the mechanics of materials and an appendix on the "Graphical Statics of Mechanism." 146 pages and plates, cloth.....$2.50

Safety Valves: their History, Invention, Antecedants and Calculations. By W. B. LEVAN. Illustrated pocket-book style, cloth $1.50; leather $2.00

Practical Carriage Building. A collection of articles compiled from those contributed to the columns of *The Blacksmith and Wheelwright* during the past few years, and covering the entire range of the art of carriage building from the plan of a vehicle to its completion, illustrating and describing fully the sectional parts. Edited by M. T. RICHARDSON. Beginning with some remarks on the proper timbers to use, plans for a carriage shop are described and illustrated; then come the tools, floor, bench and wood-working appliances necessary for a successful shop. Following this is a chapter on wheels and the repairing of wheels, and then are described and illustrated mortises, laps, gather of wheels, plumb spoke, etc. Illustrated, Vol. I, 224 pages, cloth.....$1.00

Ways and Means for Machinists, Metal Workers, Model Makers, Watch and Tool Makers, Jewelers, Draftsmen, etc. Being a collection of hints and helps not found in books usually written for this class of artisans. By A. H. CLEAVES, M.E. 125 illustrations, 158 pages, cloth $1.00

Mineral and Railway Map of Southwest Virginia and Contiguous Territory. The position of Southwest Virginia, Eastern Tennessee, West North Carolina, East Kentucky, and part of West virginia ores, coal areas, furnaces, collieries, manufactures, railways, roads, streams, mountains, towns and their population, leading industries, agricultural and pastoral belts, and the scientific and economic geology; iron, manganese, coal, zinc, lead, copper, sulphur, tin, gold, marble, slate and lithographic stone, are all shown on Boyd's Map of the Mineral Resources and Railway Facilities of Southwest Virginia and Contiguous Territory. This map extends from East of Roanoke, Lynchburg, Staunton and Danville, westward to Knoxville, Asheville, Cumberland Gap and Ohio River, Kenova and Cincinnati: a region unexampled in the progress of its safe mineral developement. Map is on a scale of six miles to an inch for its greater part. On cloth, pocket form, 21st edition.....$5.00

Why Band Saws Break. Sixteen reasons and how to avoid them. Being instructions to filers on the care of large band-saw blades used in the manufacture of lumber. By JOSHUA OLDHAM. 90 pages, illustrated, cloth.....$1.00

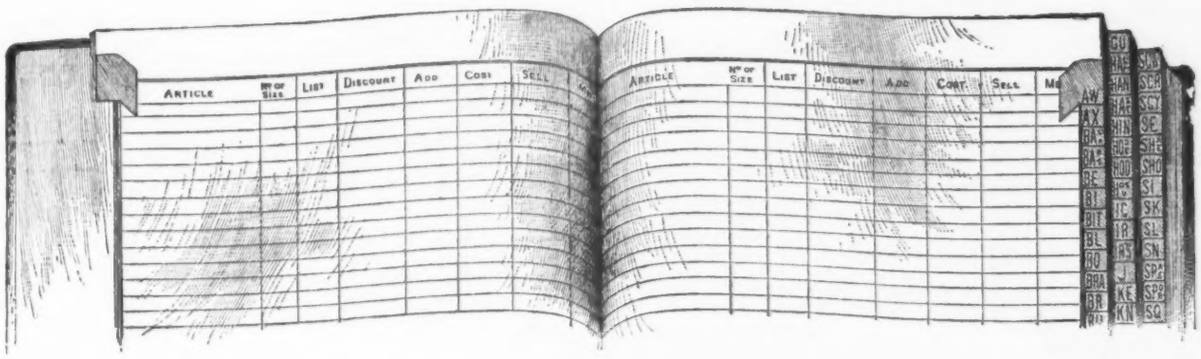
WOLCOTT & WEST. SYRACUSE, N. Y.

The Iron Age Hardware Price Book E,

WITH MULTIPLE INDEX (Patent Pending).



SIZE.—The book is 7 x 10 inches (much larger than Price Books A, B, C or D), 280 pages.

PAPER.—The paper is the celebrated Crane's heavy ledger paper, tough and strong, permitting frequent changes and erasures

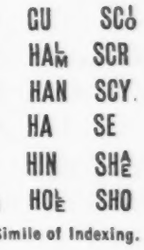
BINDING.—The binding is of the very best quality—flexible seal grained leather with pocket.

INDEX.—By means of the arrangement shown in the cut the index applies to every page (except Supplement) and permits reference to any article at a single motion. This greatly facilitates the use of the book, avoiding the troublesome turning from page to page which is necessary in connection with other Price Books. It has been prepared with great care, and it is believed that it provides a place for every article in the Hardware line.

ARRANGEMENT.—The book is arranged to keep a complete record of prices on a single page, the width giving sufficient room.

SUPPLEMENT.—A 40-page Supplement is provided to give room for supplemental quotations, memoranda, tables, &c.

This book is issued in only one edition, **price $5.00.**



Fac Simile of Indexing.

THE IRON AGE STANDARD HARDWARE LISTS

FOR USE IN PRICE BOOKS.

Compiled by R. R. WILLIAMS, Hardware Editor of The Iron Age.

PRICE 25 CENTS.

This pamphlet contains the principal standard Hardware price-lists in as clear and compact an arrangement as possible, so as to permit their being advantageously cut out and inserted in the price book. In order to make them adapted to this use they are printed on thin and tough paper of fine quality and on only one side of the paper.

Saucepans and Round Boilers.

	Plain.	Turned.	Tin'd or En'd.
Pints.			
1	$0.30	.35	.39
1½	.32	.37	.44
2	.35	.39	.48
3	.42	.47	.56
Quarts.			
2	.50	.56	.63
2½	.53	.59	.68
3	.55	.62	.73
4	.60	.68	.84
5	.65	.75	.96
6	.70	.81	1.11
7	.75	.84	1.21
Gallons.			
2	.85	.96	1.31
2½	1.05	1.18	1.56
3	1.20	1.35	1.70

The success of the effort to give the lists in small space is illustrated in many of the lists, in which a clear and condensed arrangement is secured. For instance, the wrench list occupies but 3 inches by ¼ inch, while the list of Stove Hollow Ware, in very small space, gives the list prices on a large and important line of goods which often occupy several pages in catalogues. In several lists, such as Strap and T Hinges and Butts, a new arrangement is adopted, which is regarded as presenting these lists in a very convenient as well as condensed form.

As is obvious from the lists herewith reproduced, the shape and size of the different lists varies greatly, the aim being to give each list the smallest and most convenient arrangement possible. None of the lists are, however, more than 3½ x 6 inches in size, very few of them being as large as this and most of them very much smaller. In use it is intended that they shall be trimmed closely before they are inserted in price books, when they may be attached either by one edge close to the hinge of the book, as will, perhaps, be most convenient with the larger lists, permitting the use of the entire page for memoranda, or the smaller lists may be pasted on the page in connection with the entries in regard to discounts, freights, &c. Many of the lists are so compact in arrangement as when thus inserted to leave ample room for recording quotations

Stove Hollow Ware. Ground and Unground.

POTS, KETTLES, ETC. (CAST IRON.)

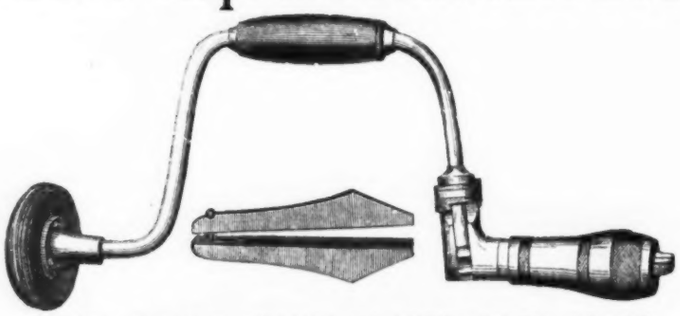
Barber's Improved Ratchet Brace.



STEEL BRACE, NICKEL-PLATED, WITH BRASS ANTI-FRICTION COLLAR.

This is the perfection of a Bit Brace, having a regular Barber Chuck, with Forged Steel Jaws, and also Dolan's Patent Ratchet Attachment, to be used in places where there is not room to revolve the sweep. A slight back and forth motion will drive the bit in or out. All the working parts are made of steel, and the whole brace is beautifully finished.

FOR DEALERS!

THE CELEBRATED

"PERFECTION"

Water Elevator and Purifying Pump.

The storage of water in cisterns and open wells is the method largely adopted throughout this country by the people for Drinking, Cooking and Bathing purposes. We have had an abundance of rainfall, all wells and cisterns are full, and such being the case we all know the water contained therein becomes FOUL and STAGNATED during the months of July, August and September. If you will place a "PERFECTION" PUMP on your well or cistern we GUARANTEE the water to become and remain as PURE as a MOUNTAIN STREAM. Try it and be convinced. It is the simplest structure for raising water on the Continent—guaranteed not to freeze.

The Perfection

Having no Valves, Tubes or Plungers to get out of order, no Wood Tubing to Pollute the water, no attachment below platform, never has to be primed, packed or thawed out. Guaranteed never to freeze; easiest pump operated. Over 140 000 in daily use.

We are now striping and decorating the "Perfection" in the finest manner possible.

Agents wanted in every town. Dealers write your jobbers for quotations. Be sure you get "The Perfection," take no other. For full information, circulars, catalogues, etc., address the manufacturers.

From The Cleveland (Ohio) Leader,

OF MARCH 25th, '92.

A PATENT SPRING CURRY COMB.

F. E. Kohler & Co., of Canton, filed a bill of complaint yesterday in the United States Circuit Court to enjoin the George Worthington Company from selling spring curry combs manufactured by the Spring Curry Comb Company, of South Bend, Ind. The bill sets forth that F. E. Kohler & Co. are the owners of letters patent No. 220,986, issued October 28, 1879, to Paschal Plant, of Washington, for an improvement on curry combs. This patent, it is claimed, is being infringed by the George Worthington Company in the sale of combs manufactured for them by the Spring Curry Comb Company.

CAUTION.

Comb is secured to us by Letters Patent No. 464,773, dated December 8th, 1891, and we have secured control of Patent No. 220,986, dated October 28th, 1879, issued to Paschal Plant, together with all accrued claims for infringement of said Letters Patent. We hereby CAUTION all parties against MAKING, SELLING or BUYING Curry Combs that in any manner infringe these Patents. The said Patent No. 220,986 is the BOTTOM PATENT to FLEXIBLE or SPRING Curry Combs. The "claim" thereof reads as follows: "As a new article of manufacture, a flexible Curry Comb formed of a toothed strip of metal or other suitable material, without a plate or back, and with a suitable handle attached directly to the strip, substantially as described." Parties MAKING, SELLING or BUYING FLEXIBLE or SPRING Curry Combs not licensed by us under the above-mentioned Patent are liable to damages, and we shall proceed against them as fast as possible.

NOTICE.

We have licensed the DECKER MFG. CO., of Keokuk, Ia., to manufacture their Spring Comb known as the "Arc" or No. 15 under the above named patent No. 220,986.

FOR SALE BY ALL DEALERS IN HARDWARE, CUTLERY AND FANCY GOODS.

GOODELL COMPANY,

ANTRIM, N. H.

TABLE KNIVES and FORKS in Rubber, Celluloid, Bone, Ebony, Cocobolo and Iron from the finest grade to the cheapest.

CARVERS. Our line is sufficient for any ordinary trade and consists of Genuine and Imitation Stag, Rubber, Celluloid, Bone, Ebony and Cocobolo handles in a variety of shapes and sizes. We particularly call attention to the fact that our carvers are made for use and will suit those people who want a carver that will cut.

STEELS. We make steels to match all patterns of carvers, also Butcher Steels, which are not excelled.

BUTCHER KNIVES. Cocobolo and Beech handle, all sizes, various shapes. It is entirely unnecessary to pay exorbitant prices for imported knives. Ours are sold at fair prices and are warranted equal in quality to any in the world.

Also Shoe Knives, Boning and Butter Knives, Butter Spades, Bread, Budding, Broom Knives, Can Openers, Coring and Trimming Knives, Cigar and Cheese Knives, Hunting, Kitchen, Putty, Scraping, Sheath, Sticking and Skinning Knives.

—We Want Your Trade.—

45 DIFFERENT FORGES and BLOWERS.

Made for 19 years. **BEST ON EARTH.** All with Steel Shaft and Pinion.

YOU TURN THE HANDLE, THE SCREW DOES THE PULLING.

THE CURLEY CORK SCREW

FOR EXTRACTING ANY CORK WITHOUT THE EFFORT OF PULLING.

The GREATEST and SIMPLEST NOVELTY in CORK SCREWS ever Made.

This Cork Screw has a steel twisted bit, made tapering and with a gimlet point, which is inserted in a finely nickel plated handle to which a bell-shaped piece is attached, and loosely fitting the bit or screw, in which is a slot, and through it is a pin, causing it to revolve with the screw and twist the cork out of the bottle.

The Empire Double Dauber.

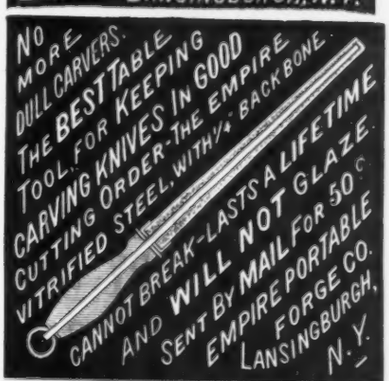
DAUBER AND MUD BRUSH COMBINED IN ONE.

No Necessity for Another Brush to Clean off the Mud.

The Bristles are inserted in a solid knot and keyed in and cannot come out. The face is cut the best form to fit the blacking box.

The knot will not mat down or spread and does not require to be wound with cord.

Packed in paper boxes of one dozen each and 12 dozen in a wooden case.



THE LAST AND BEST.

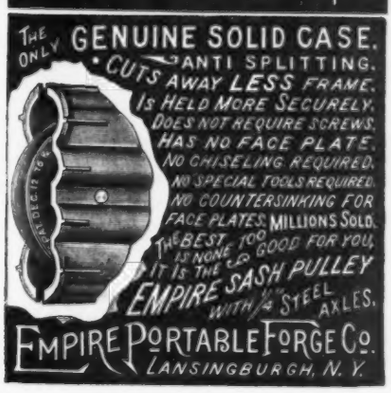
The Empire Vitrified Steel.

For Keeping Table and Butcher Knives in Good Cutting Order.

This tool has been designed with great care to meet all the requirements. The composition is a mixture of the best Turkish Emery, and reduced by fire to a solid mass which will not glaze or break.

☞ Other Emery Knife Sharpeners, without a BACKBONE of Iron, are too brittle and are broken by a fall, and being composed of a gummy mixture, will glaze, bu

THE EMPIRE VITRIFIED STEEL WILL NOT GLAZE.



The only Genuine, Solid Case, Popular Anti-Splitting

EMPIRE SASH PULLEY.

REASONS FOR USING IT.

1st. It cuts away less of the frame than any other pulley.
2d. It is held more securely than any other pulley.
3d. It does not require any screws.
4th. It has no face-plate and therefore makes a better finish.
5th. It has a ¼ inch *steel* axle.
6th. It can be inserted *easily* at the rate of one a minute or sixty per hour, *without working hard*
7th. No chiseling required. All the mortising is done with a ⅜ inch auger bit, requiring only four holes.
8th. No special tools required.
9th. No mortising or countersinking for face-plates.
10th. It is **STRONGER, NEATER,** more quickly applied, and hence **CHEAPER** than any other pulley **ON EARTH.**
11th. Because you cannot **AFFO** to use any other.

MILLIONS IN USE. SEND FOR SAMPLE.

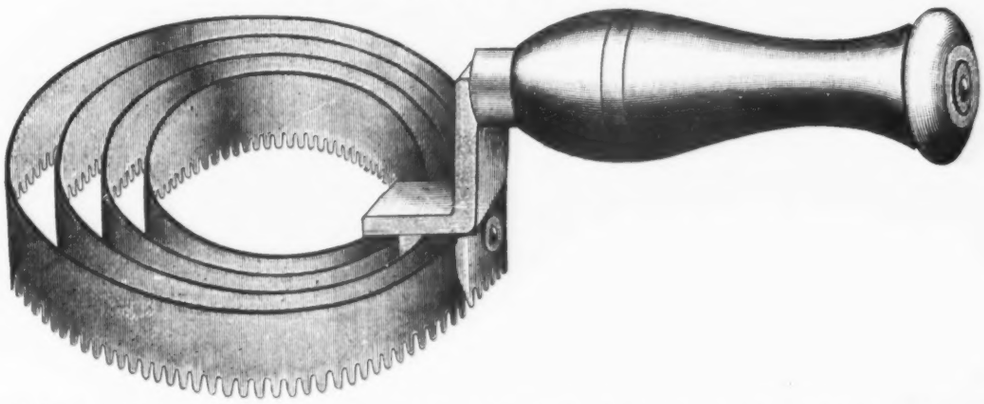
SPRING CURRY COMB.

Endorsed by the civilized world as "The only perfect curry comb."
Worth many times its cost.



Its leading position is impregnable; it positively has no weak points, either practically, mechanically or legally. Patented in the U. S, July 16, 1889; also in ten foreign countries. Endorsed and used by the United States Army. Sold by leading jobbers; bought on sight by nearly every one using curry combs, because it is the only one made from a clock spring, combining strength with flexibility, and a touch as gentle as a woman's hand, but say! how it gets there!!

BLUE IMPROVED PROCESS LABEL

The Improved Process Glue Co., having purchased from The Le Page Co., all its patent rights, formulas, glue stock and material, and having secured control of its glue factory, machinery, etc., will continue the manufacture of Liquid Fish Glues in all the various grades heretofore offered by The Le Page Co., under the personal supervision of Mr. WM. N. LE PAGE, and under the Improved Process Patent issued October 26th, 1886. As is well known, the Improved Process by which these goods are made assures the highest strength with thorough uniformity as to quality, consistency and color. We call special attention to our **Improved Process Family Glues,** neatly put up for family use, and also to our **Improved Process Carriage Glue for wood-work,** put up in every variety of size and style. This Carriage Glue is undoubtedly the strongest and best glue for every variety of cabinet and wood-work, and has earned its high reputation. All our canned glues are put up with the **new patent cap** or fastening, patented January 22d, 1889, which has proved a great convenience and success. Our glues will be readily identified by our characteristic **Blue Label,** and the Trade-Mark shown at the head of this page. Send for Price-List. Messrs. TOWER & LYON will have charge of our New York office. Very truly yours,

THE IMPROVED PROCESS GLUE CO., New York Office, 95 Chambers St.

Cronk's Patent Wire Cutter AND Bender.

This surpasses any Plier in the market for Cutting and Bending Wire, and can also be used in place of Hill's Hog Ringer. Is especially adapted to farmers' use in building Wire Fence, &c.

Our reasons for claiming that we have the best Pliers in the market are:

FIRST.—We use the best Tool Steel and they are nicely finished.

SECOND.—We combine both Flat and Round-Nosed Pliers in one; the concave and convex circles between the handles are used for bending wire in any desired shape.

THIRD.—The cupping in the Nose is used for pulling tacks, brads or nails, and can also be used in place of Hill's Hog Ringer.

FOURTH.—We can cut Barbed Wire, Barb Belt or any kind of Wire used for Fencing purposes. We also claim that we have the only Plier made that the Cutting Jaws cannot be broken.

By passing the Wire through the Pliers it makes a very handy cut and also holds the Wire after it is cut.

C. B. P.

What we claim for this plier it that it is made from best quality tool steel and is made heavier and stronger than any plier of its kind in the market and the finish is first-class. Also they are made so the jaws are parallel when used on wire from 9 to 14 gauge and will hold the wire solid.

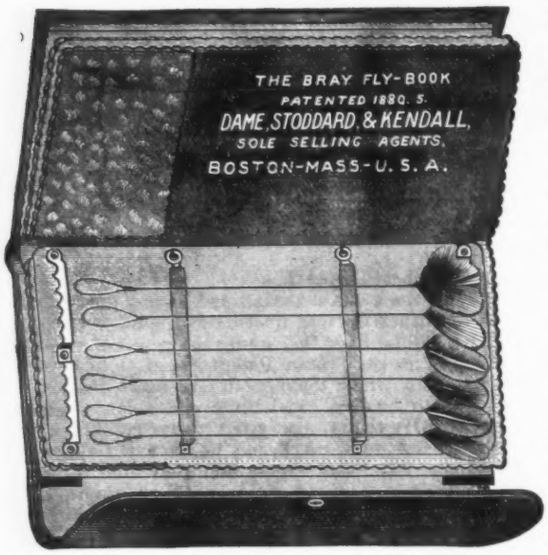
THE BRAY FLY BOOK.



THE reputation of the BRAY FLY BOOK as the neatest and most practical Fly Book made is well established everywhere. The quickness and dispatch with which Flies of any size are placed within these books without coiling of the Snell or mutilation of the Fly makes its superiority over all other methods very easily recognized by all anglers. The Flies can be as readily detached when wanted. The leaves to which the Flies are attached will in the future be made of a new material of more durability and finish than before. The workmanship and material will be kept up to highest standard, and no effort will be spared to keep the BRAY FLY BOOK (as it now is) the BEST in the WORLD.

THE CINCINNATI MFG. CO., CIN., O.

IMPROVED EDITION OF THE IRON AGE

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of the Iron Age.

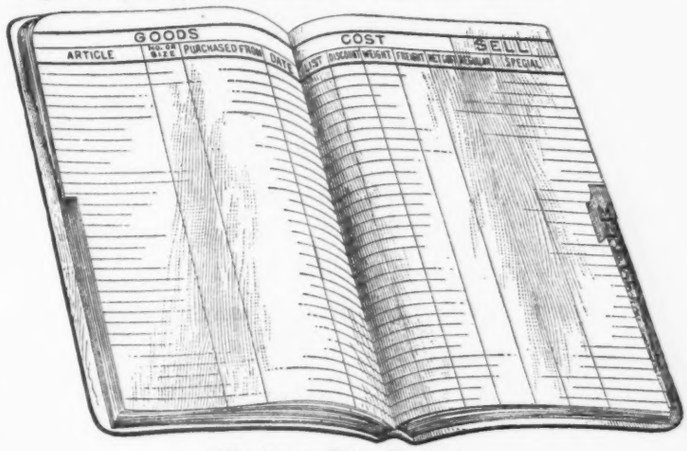
These Books are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses as an element of cost. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. This book goes into considerable detail in describing the goods and cost prices. It has been arranged in accordance with the views of many Hardwaremen whose methods are careful and exact.

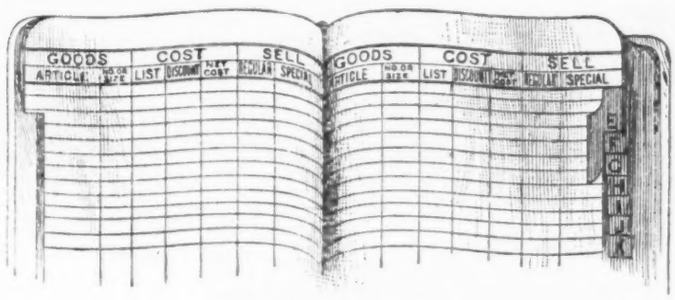
Size, 4 x 7 in.; grain seal leather.

FOUR EDITIONS:

A, 200 pages,	$1.00
A F, 200 pages with flap,	1.25
A 2, 400 pages,	1.50
A F 2, 400 pages with flap,	1.75



Hardware Price Book A.



Hardware Price Book B.

In this book each page is complete, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. It is adapted for office or store use, and by the use of familiar abbreviations, sufficiently large for the convenient and concise record of prices.

Size, 4 x 7 in.; grain seal leather.

FOUR EDITIONS:

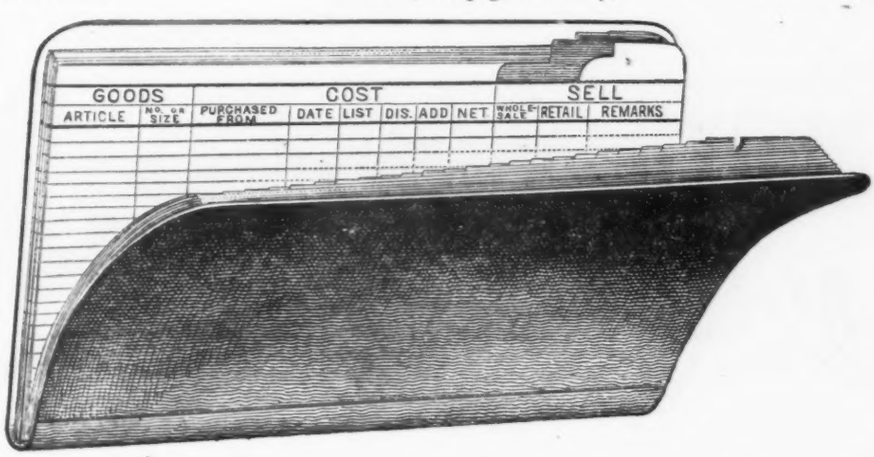
B, 200 pages	$1.00
B F, 200 pages with flap,	1.25
B 2, 400 pages,	1.50
B F 2, 400 pages with flap,	1.75

The headings in Book C run across the top, in a line parallel with the hinge. In this way a very complete record can be kept on a single page. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses which it is desirable to include in the cost. Under the selling prices space is left for the wholesale price, the retail price, and also for any remarks in regard to cost of the goods, desirability of pushing them, or other matters.

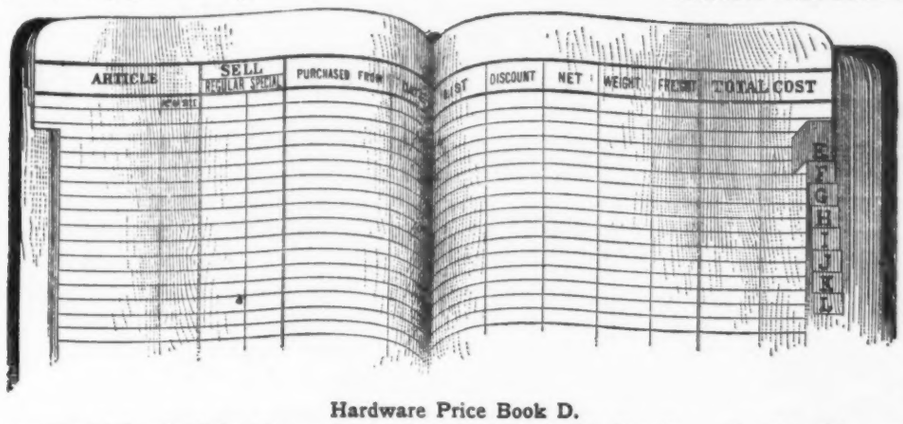
Size, 4½ x 7¾ in.; grain seal leather.

FOUR EDITIONS.

C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75



Hardware Price Book C.



Hardware Price Book D.

Price Book D will recommend itself particularly for desk and store use, and for salesmen on the road.

The name of the article, its number or size and the selling price are the first to meet the eye on the left-hand page, as embodying information desired when the selling price is required. The other headings follow in convenient order, by which a detailed memorandum regarding the goods may be kept, the whole being seen at a glance. A number of pages at the back of the book are arranged for memoranda, which will be found a great convenience. This arrangement is adapted to the requirements of the trade in this direction. Size 5¼ x 8 in.; grain seal leather.

FOUR EDITIONS.

D, 200 pages,	$2.00
D F, 200 pages, with flap,	2.50
D 2, 400 pages.	$3.00
D F 2, 400 pages, with flap,	3.50

Sent, post-paid, on receipt of price by **DAVID WILLIAMS, Publisher, 96-102 Reade St., New York.**

SAW SET.

A WOOD-BUTCHER CAN SET A SAW AS WELL AS A SAWYER.

The Screw on the top of the Set prevents mashing the Tooth. The Gauge on the side assures the correct set, and the small Screw on the face of the Set gives the required bend to the tooth. All wearing parts are made of steel, strong and durable.

LIST: HAND SAW SETS, $15.00 PER DOZEN. CROSS CUT SAW SETS, $30.00 PER DOZEN.

METROPOLITAN.

This differs from our other wood frame wringers of medium price in having malleable iron swinging clamps of a strong and improved pattern, that swing under the wringer, and a folding apron, allowing the machine to be closely packed for shipment, and it is preferred by many because of the small space it occupies in storage. It is a handsome, well proportioned machine, of hard maple frame, the wood being selected, free from defects and blemishes. Two top thumbscrews, metal journal boxes and oil cups combined, double gears, etc.

Furnished in natural wood or cherry stain without extra charge.

Wrought Steel Hollow Ware.

"Empire" Cold Handle Steel Spiders.

PATENTED.

The "Empire" Cold Handle Spiders are made from cold rolled wrought steel of the highest grade and finish, and are stamped from a SINGLE PIECE, and polished perfectly smooth and bright. The thickness of the steel of which the Empire Spiders are made (No. 14 Standard gauge) is a **guarantee that they cannot break, bend or warp.** An important feature also is that they are made **without rivets,** and **cannot leak** or the handles become loose.

The handle is reinforced in an attractive manner with a cover made of heavy tin, making a hollow ventilated handle which keeps always cool and comfortable to the hand.

The Empire SPIDERS will be found on inspection the most perfect ever made and cannot fail to give satisfaction. Our 1890 Catalogue of Patented Specialties, Acme Fry Pans, and Edgars' Patent Stove Shovels, mailed on application.

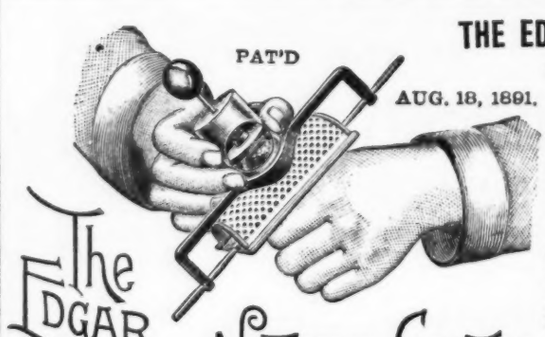
COLBY WRINGER COMPANY.



THE EDGAR NUTMEG GRATER

POSITIVELY THE ONLY GOOD NUTMEG GRATER EVER MADE.

It is the old-fashioned Nutmeg Grater, with a carrier for HOLDING the Nutmeg, so attached as to move freely, forward and back, and from side to side, preventing the grated Nutmeg adhering to the surface of the Grater and bringing every part of its surface into use. Using this Grater, the Nutmeg can be grated to the merest shell without injury to the fingers or nails or dropping the Nutmeg. Its simplicity commends it. It is durable and economical and retails for 20 and 25 cents each. Liberal discount to the trade. Ask your jobber for the EDGAR NUTMEG GRATER.

CHEAP EGGS SOON!

This new way of cooking eggs (by steam) is becoming very popular.

The best is none too good for people now-a-days, especially when half a dollar will obtain it. Be sure and have some **Buffalo Steam Egg Poachers** always on hand, so not to disappoint customers.

No. 1, Plain, $6.00 per doz.
" 2, Retinned, 9.00 "
Discount, — per cent.

SOLE MANUFACTURERS,

SIDNEY SHEPARD & CO.,

BUFFALO, N. Y.

A DIFFICULT PROCESS MADE EASY

THE BUFFALO STEAM EGG POACHER

POACHES EGGS BY STEAM.

WHEN READY FOR THE TABLE THE EGGS ARE OF UNIFORM SHAPE AND INVITING APPEARANCE.

MAY BE TRANSFERRED TO TOAST OR PLATE WITHOUT DANGER OF BREAKING.

Mrs. Gen. Lew Wallace Says:

"Lifting the cover discloses the delicate morsel, the yolk gleaming in soft color through a cloud of transparent whiteness. Have ready the buttered toast; the eggs slip each from its own little cup easily as from the parent shell: a dish fit to set before a king. Easy to have a delicious luncheon with the aid of the bright utensil which makes cooking so easy, it seems to act with its own intelligence. In the sea of trouble awaiting the young housekeeper pushing out into unknown depths, the Buffalo Steam Egg Poacher will be found a sure thing to rest upon when all else fails."

COMING RIGHT ALONG.

OFFICE OF
K. FITCH & CO.,
Hardware, Stoves, Tinware, etc.,
Kansas City, Mo., Jan. 15, '92.

The Sun Stamping Co., Kalamazoo, Mich.

GENTLEMEN:—Yours of the 11th, rec'd and contents noted. In reply, say, that The Morgan Broilers we sold have given so far as we have learned, good satisfaction—*not any complaint.* We have been using one in our house for more than a year, and we could not be induced to part with it for any reasonable consideration. We find it **DOES** the work as represented, when instructions are followed. It **DOES** make meat juicy and tender, and for the purposes for which it is intended, we believe it to be the most economical piece of furniture we have in the house. * * *

Very Respectfully,
K. FITCH & Co.

Perhaps there is a gentle hint here for other dealers. The "moral" would be, order a sample lot and be convinced. Unless there is gain in the transaction for you, there is none for us. Once a customer—"always."

The Morgan specialties in tin and sheet metal are manufactured solely by

Bemis & Call Hardware & Tool Co.

COMBINATION WRENCH.

Case-Hardened Throughout. Parts Interchangeable.

This wrench not only combines the superior qualities of a Gas Pipe Wrench but also all the requisite combinations of a regular Nut Wrench, thus making a combination which has no equal.

This Wrench can be Furnished with Long Nut or Sleeve.

No. 3 PIPE WRENCH.

The serrated jaws of the Wrench are interchangeable; that is, the same serrated plate may be used for either the stationary or sliding jaw, so that if one plate is broken another can be furnished adapted to either jaw without express designation. The slides, nuts and various parts are also interchangeable, thus easily repairing the Wrench at very small expense, and with as perfect practicability for further use as when the Wrench was new

For Circulars and Price List, address

BEMIS & CALL HARDWARE & TOOL CO., Springfield, Mass., U. S. A.

TRIMO PIPE WRENCH,

Forged Steel.

All parts interchangeable.

Grips firmly without loss of motion, in close quarters. Releases its hold readily. Does not crush the pipe. Causes no trouble

TRIMO CHAIN PIPE WRENCH.

"RIVAL" PATENT Lawn Sprinkler.

Cheapest and Best in Use.

Agents Wanted. Liberal discount to buyers.

The Spray from it covers *upward of 1000 sq. feet of lawn.* It is the only patent adjustable Sprinkler which is adaptable to any water pressure. Being made of brass, and having no revolving parts to wear out, or small opening to clog up, it can be operated with sandy or muddy water as well as clear, and will last for years. To operate, screw Sprinkler on end of hose, stick the rod into the ground in a vertical position, adjust the scorn to suit pressure and spray wanted and it is ready for use. It may be so regulated as to throw a spray *as coarse as rain* or *as fine as mist*, and will make one of the most beautiful fountains imaginable. It is unequaled in merit, requires no attention and is sold at a less price than any sprinkler in the market. Remember, the RIVAL is the only Sprinkler made by which the coarseness of the spray and the area to be wet can be regulated. They are packed 1 doz. in a box, and finished either plain or nickel-plated.

FULL SIZE.

1 doz. regular 4 yard Thread, $7.50
1 Inch, for Pipe Thread to order per doz. 12.00

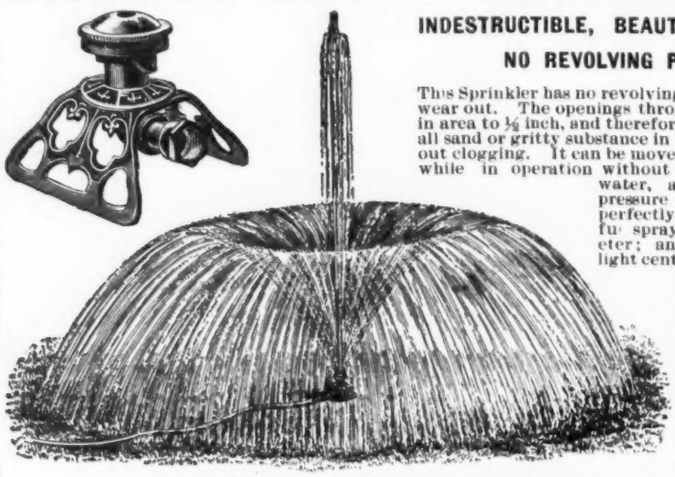
CACTUS LAWN SPRINKLER.



INDESTRUCTIBLE, BEAUTIFUL, CHEAP.

NO REVOLVING PARTS.

This Sprinkler has no revolving parts to leak or wear out. The openings throughout are equal in area to ⅛ inch, and therefore will pass freely all sand or gritty substance in the water without clogging. It can be moved about the lawn while in operation without turning off the water, and with a low pressure will distribute a perfectly even and beautiful spray 30 feet in diameter; and in addition a light center fountain spray 15 to 18 feet in height. It is recommended as the most durable, beautiful and cheapest Sprinkler in the market and is guaranteed to give entire satisfaction to any purchaser. For sale by all dealers.

Bradley Hammers

2000 IN USE.

FOR 20 YEARS these Hammers have been in the market, and during all that time have been acknowledged the very best. The material we use and our method of construction are the result of ripe experience, and not the jumped-at conclusions of amateurs. Send for circulars and price-lists.

BRADLEY & COMPANY,

SYRACUSE, N. Y.

Large Reduction in Prices.

FEBRUARY 15th.

A REVOLVER without a **LOADING GATE** is as useless all year round as a pair of **ICE CREEPERS** would be **IN JULY.**

BECAUSE all central fire cartridges are now made inside-lubricated, and will slip out of revolvers having no Loading Gate. All the X. L. Revolvers, both with Regular and Folding Hammers, have Loading Gates and Rebounding Locks.

We have largely increased our facilities for the manufacture of the X. L. Revolvers and H. & A. Automatic Ejecting Revolvers, and shall be able to fill all demands promptly this coming year. This is the best selling line ever put on the American market and retailers can double their money on these goods.

Our new illustrated catalogue, with reduced prices, will be ready on the 25th of February and will be sent upon request to any dealer.

HULBERT BROS. & CO.

Opposite Fifth Ave. Hotel, Formerly MERWIN, HULBERT & CO.,

26 West 23d Street, New York.

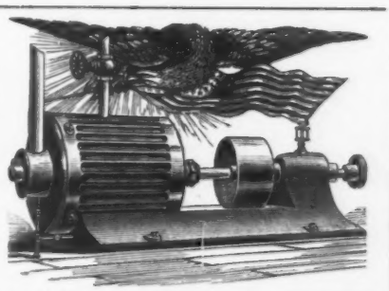
THE PRACTICAL BRASS AND IRON FOUNDERS' GUIDE.

A Concise Treatise on Brass Founding, Moulding, the Metals and their Alloys, &c., to which are added recent improvements in the Manufacture of Iron, Steel by the Bessemer Process, &c., &c. By JAMES LARKIN, late Conductor of the Brass Foundry Department in Reany, Neafie & Co.'s Henn Works, Philadelphia. Fifth edition, revised, with extensive additions. In one volume, 12mo. $2.25. Sent, post-paid, on receipt of price, by

DAVID WILLIAMS, Publisher and Bookseller,

96-102 Reade Street, - NEW YORK.

WHEN: Business hints for business men in business hours. Bound in attractive pamphlet form, with superior quality of paper and print. Price 25c. This little book, comprising a series of business maxims the result of wide experience and observation, should be read by every business man or clerk and all those engaged in commerce or trade. Successful merchants will here recognize, in condensed form, the principles upon which their prosperity has been based, and will find reminders and pointers which cannot fail to be an invaluable aid. Clerks, Tradesman, and those who have yet their way to pave, will find the essential facts which govern all permanent success, many of which to him are either unknown or not fully appreciated. Each paragraph is introduced by the title word WHEN. Sent, post-paid, on receipt of price by DAVID WILLIAMS, Publisher, 96-102 Reade St., New York.



AMERICAN HIGH SPEED ENGINE, built of any required size and power, for all stationary and marine purposes. Makes 1000 or more revolutions per minute. Has no dead centers. Unequaled regulation. No skilled engineer required! Cheap! Economical! Simple! Durable!
